

TABLE OF CONTENTS

	Page
Preface	iii
Prefactory note to the Translation	vii
Chapter I. Introductory material	1
§1. Basic notation and terminology	2
§2. Classical statements of the problems. The maximum principle	11
§3. On admissible extensions of the concept of a solution	25
§4. Basic results and their possible development	42
Chapter II. Auxiliary propositions	57
§1. Some elementary inequalities	58
§2. The spaces $W_q^l(\Omega)$ and $H^l(\Omega)$. Embedding theorems	60
§3. Different function spaces depending on x and t . Embedding theorems	74
§4. On averaging and cuts of elements of $L_q(\Omega)$, $L_{q,r}(Q_T)$ and $V_2^{1,0}(Q_T)$	82
§5. Some other auxiliary propositions	39
§6. On estimates of $\max u $. The class $\mathfrak{U}(Q_T, \gamma, r, \hat{k}, \kappa)$	102
§7. The class $\mathfrak{B}_2(Q_T, M, \gamma, r, \delta, \kappa)$	110
§8. The function classes $\mathfrak{B}_2(Q_T \cup \Gamma', \dots)$ and $\mathfrak{B}_2(Q_T \cup \Gamma', \dots)$	122
§9. The function classes \mathfrak{B}_2^N	128
Chapter III. Linear equations with discontinuous coefficients	133
§1. Statement of the problem. Generalized solutions	134
§2. The energy inequality	139
§3. Uniqueness theorems	145
§4. Solvability and stability of the first boundary value problem in the classes $V_2^{1,1/2}(Q_T)$ and $W_2^{1,1/2}(Q_T)$	153
§5. On the solvability of other boundary value problems. The Cauchy problem	167
§6. On estimates in the space $W_2^{2,1}(Q_T)$ and their consequences	172
§7. An estimate of $\max_{Q_T} u $. The maximum principle	181
§8. Local estimates of $\max u $	191
§9. Estimates of some norms of Orlicz for generalized solutions	194

§10. An estimate of Hölder's constant. Harnack's inequality	204
§11. An estimate of $\max_{Q'} u_x $ and $\langle u_x \rangle_Q^{(a)}$	210
§12. On the dependence of the smoothness of generalized solutions on the smoothness of the data of the problem	219
§13. On diffraction problems	224
§14. Functional methods for the solution of boundary value problems	233
§15. The method of continuity in a parameter	239
§16. Rothe's method and the method of finite differences	241
§17. On Fourier's method	252
§18. On the Laplace transform method	255

Chapter IV. Linear equations with smooth coefficients

§ 1. The heat equation and heat potentials	261
§ 2. Estimates of the heat potentials in Hölder norms	273
§ 3. Estimates of the heat potentials in the norms of $W_q^{2m,m}$	288
§ 4. Domains. Some auxiliary propositions	294
§ 5. Formulation of basic results on the solvability of the Cauchy problem and boundary value problems for equations with variable coefficients in Hölder function classes	317
§ 6. Model problems in a half space	323
§ 7. On the solvability of problem (5.4')	328
§ 8. On the solvability of problem (5.4)	338
§ 9. The first boundary value problem in classes $W_q^{2,1}(Q_T)$	341
§10. Local estimates of the solutions of problems (5.3) and (5.4)	351
§11. A fundamental solution of the parabolic equation of second order	356
§12. Some auxiliary inequalities for the function Q	364
§13. Estimates of the fundamental solution	376
§14. Solution of the Cauchy problem	389
§15. The single-layer potential	395
§16. Solution of the first boundary value problem	406
§17. On the estimates of S. N. Bernštein	414

Chapter V. Quasi-linear equations with principal part in divergence form

§ 1. Bounded generalized solutions. Hölder continuity	418
§ 2. On the boundedness of generalized solutions	423
§ 3. Estimates of $\max_{Q'} u_x $ and $\langle u_x \rangle_{Q'}^{(a)}$	430
§ 4. An estimate of $\max u_x $ in the whole domain	438

§ 5. Estimate of $\langle u_x \rangle_{Q'}^{(a)}$ and higher derivatives in an arbitrary subdomain of the domain Q_T	444
§ 6. The solvability of the first boundary value problem	449
§ 7. Other boundary value problems	475
§ 8. The Cauchy problem	492
§ 9. On the Stefan problem	496
§ 10. Another method of estimating the Hölder constant for solutions	503
Chapter VI. Quasi-linear equations of general form	515
§ 1. A proof of the smoothness of generalized solutions of class \mathfrak{R} and an estimate of $\langle u_x \rangle_{Q'}^{(a)}$	516
§ 2. An estimate of $\langle u_x \rangle_{Q_T}^{(a)}$	524
§ 3. The estimation of $\max u_x $	533
§ 4. Existence theorems	556
§ 5. Equations with one space variable	560
Chapter VII. Systems of linear and quasi-linear equations	571
§ 1. Generalized solutions of linear systems	571
§ 2. On the boundedness of $\max_{Q_T} u $	574
§ 3. An estimate of $ u _{Q_T}^{(a)}$	579
§ 4. On estimates of $ u_x _{Q'}^{(a)}$ and of other higher norms of the solutions	583
§ 5. Quasi-linear parabolic systems. Estimates of the norms $ u _{Q_T}^{(l+a)}$, $l \geq 1$, in terms of $\max_{Q_T} u, u_x $	585
§ 6. An estimate of $\max_{Q_T} u_x $	588
§ 7. An existence theorem for quasi-linear systems	596
§ 8. Linear parabolic systems of general form	597
§ 9. Statement of the boundary value problems and the Cauchy problem for parabolic systems	604
§ 10. Basic results on the solvability of the Cauchy problem and of the general boundary value problems for parabolic systems	615
Bibliography	631
