Contents

Preface vii

List of symbols xi

1 Maximum principles 1
1.1 Elliptic equations 2
1.2 Parabolic equations 5
1.3 Phragmén–Lindelof principles 13
1.4 Applications to nuclear reactor theory 19
Exercises 27

2 Entire solutions of elliptic equations 29
2.1 Harnack inequalities 29
2.2 Liouville's theorem 36
2.3 Wave propagation in a nonhomogeneous medium 37
Exercises 56

3 Analytic solutions of partial differential equations 58
3.1 The Cauchy–Kowalewski theorem 59
3.2 Unique continuation 63
3.3 Analyticity of solutions to partial differential equations 70
3.4 Equations with no solution 78
Exercises 80

4 Analytic continuation 82
4.1 Reflection principles for elliptic equations 83
4.2 Reflection principles for parabolic equations 95
4.3 The envelope method 106
4.4 Analytic continuation of analytic solutions to the heat equation 108
Exercises 112

5 Runge's theorem 114
5.1 Elliptic equations and the kernel function 114
5.2 Parabolic equations 120
5.3 The Helmholtz equation in an exterior domain 130
Exercises 133

6 Pseudoanalytic functions 135
6.1 Singular integrals 136
6.2 The similarity principle and its applications 141
6.3 Reflection principles 145
Exercises 153

7 The backwards heat equation 155
7.1 The method of logarithmic convexity 158
7.2 Quasireversibility and pseudoparabolic equations 160
Exercises 179

8 The inverse scattering problem 180
8.1 Equivalent sources and their location 181
8.2 The Born approximation 186
8.3 Potential theory 189
8.4 The inverse scattering problem for a cylinder 206
Exercises 223

Bibliography 225
