# *Contents*

**Preface** . . . . . xi

**1 Basic Linear Algebra** . . . . . 1

1.1 Introduction. . . . . 1
1.2 Notation . . . . . 2
1.3 Definitions. . . . . 2
1.4 Linear vector space . . . . . 5
1.5 Useful matrix properties . . . . . 7
1.6 Vector and matrix norms . . . . . 10
1.7 Theorems relating matrix norm to spectral radius . . . . . 13
1.8 Convergence of sequences of matrices . . . . . 15

**2 Parabolic Equations** . . . . . 17

2.1 Parabolic equations in one space dimension . . . . . 17
2.2 Derivation of an exact difference formula . . . . . 18
2.3 Explicit formulae . . . . . 20
2.4 Implicit formulae . . . . . 28
2.5 Solution of tridiagonal systems . . . . . 32
2.6 Convergence. . . . . 35
2.7 Stability . . . . . 38
2.8 Derivative boundary conditions . . . . . 47
2.9 Parabolic equations in two space dimensions. . . . . 53
2.10 Explicit methods. . . . . 54
2.11 Stability of explicit methods . . . . . 58
2.12 Alternating direction implicit (A.D.I.) methods. . . . . 59
2.13 Locally one-dimensional (L.O.D.) methods. . . . . 70
2.14 Hopscotch methods . . . . . 77
2.15 Mixed space derivative . . . . . 81
2.16 Parabolic equations in three space dimensions. . . . . 82
2.17 Explicit methods. . . . . 83

2.18 Implicit methods . . . . . 85
2.19 Three-level difference schemes . . . . . 89
2.20 Explicit schemes . . . . . 89
2.21 Implicit schemes . . . . . 92
2.22 Non-linear equations . . . . . 97

**3 Elliptic Equations** . . . . . 102

3.1 Elliptic equations in two dimensions . . . . . 102
3.2 Laplace's equation in a square . . . . . 103
3.3 The Neumann problem . . . . . 105
3.4 Mixed boundary conditions . . . . . 109
3.5 Non-rectangular regions . . . . . 111
3.6 Self-adjoint elliptic equations . . . . . 114
3.7 Alternative methods for constructing difference formulae . . . . . 116
3.8 General properties of difference formulae . . . . . 121
3.9 Mixed partial derivatives . . . . . 125
3.10 The biharmonic equation . . . . . 129
3.11 The solution of elliptic difference equations . . . . . 133
3.12 Direct factorization methods . . . . . 133
3.13 Successive over-relaxation (S.O.R.) . . . . . 137
3.14 A.D.I. methods . . . . . 148
3.15 Conjugate gradient and related methods . . . . . 154
3.16 Eigenvalue problems . . . . . 161

**4 Hyperbolic Equations** . . . . . 164

4.1 First-order hyperbolic equations . . . . . 164
4.2 Explicit difference formulae . . . . . 165
4.3 Implicit difference schemes . . . . . 168
4.4 First-order hyperbolic systems in one space dimension . . . . . 172
4.5 Systems of conservation laws . . . . . 176
4.6 First-order hyperbolic systems in two space dimensions . . . . . 180
4.7 Conservation laws in two space dimensions . . . . . 184
4.8 Dissipation and dispersion . . . . . 187
4.9 Stability of initial boundary value problems . . . . . 189
4.10 Non-linear instability . . . . . 191
4.11 Second-order equations in one space dimension . . . . . 193
4.12 Second-order equations in two space dimensions . . . . . 200

**5 The Galerkin Method** . . . . . 210

5.1 Introduction . . . . . 210
5.2 Elliptic equations . . . . . 211
5.3 Two-point boundary value problems . . . . . 213
5.4 The Galerkin method with different test and trial functions . . . . . 221

5.5 Two space variables . . . . . 223
5.6 Semi-discrete Galerkin methods . . . . . 226
5.7 Discretization in time . . . . . 230
5.8 Non-linear problems . . . . . 232

**6 Applications** . . . . . 238

6.1 Re-entrant corners and boundary singularities . . . . . 238
6.2 Incompressible viscous flow . . . . . 244
6.3 Inviscid compressible flow . . . . . 249
6.4 Other flows . . . . . 252
6.5 Shallow water equations . . . . . 252
6.6 Free and moving boundary problems . . . . . 255
6.7 Error growth in conduction-convection problems . . . . . 258

**References** . . . . . 262

**Index** . . . . . 268
