PART I BASIC CONCEPTS I

Chapter 1 Introduction 3

1.1	Background	3
1.2	History	3
1.3	Plan of the book	4
1.4	Context	4
1.5	Basic concepts of iteration theory	6
1.6	The families of maps	7
1.7	Critical points and curves	9

Chapter 2 Basic concepts in 1D 11

2.1	Maps	11
2.2	Multiplicities	12
2.3	Trajectories and orbits	14
2.4	Attractors, basins, and boundaries	22
2.5	Bifurcations	23
2.6	Exemplary bifurcations	23

Chapter 3 Basic concepts in 2D 29

3.1	Maps	29
3.2	Multiplicities and critical curves	29
3.3	An example	30
3.4	Trajectories and orbits	33
3.5	Attractors	36
3.6	Bifurcations	37

**PART 2 EXEMPLARY BIFURCATION
SEQUENCES 39**

Chapter 4 Absorbing Areas 41

- 4.1 Absorption concepts, 1D 41
- 4.2 Absorption concepts, 2D 41
- 4.3 Exemplary bifurcation sequence 45

Chapter 5 Holes 59

- 5.1 Introduction 59
- 5.2 Exemplary bifurcation sequence 59

Chapter 6 Fractal Boundaries 85

- 6.1 Contact bifurcation concepts 85
- 6.2 Exemplary bifurcation sequence 97

Chapter 7 Chaotic Contact Bifurcations 117

- 7.1 Bifurcations in one dimension 117
- 7.2 Bifurcations in two dimensions 133
- 7.3 Exemplary bifurcation sequence 137

Chapter 8 Conclusion 151

PART 3 APPENDICES 153

Appendix 1 Notations 155

- A1.1 Formal logic 155
- A1.2 Set theory 155
- A1.3 Point set topology 155

Appendix 2 Topological Dynamics 157

- A2.1 Trajectories and orbits 157

- A2.2 Inverse images 158
- A2.3 Fixed points 158
- A2.4 Periodic trajectories 159
- A2.5 Limit points 159
- A2.6 Stable sets, attractors, and basins 159
- A2.7 Unstable sets and repellers 160
- A2.8 Chaotic attractors 160

Appendix 3 Critical Curves 161

- A3.1 The zones 161
- A3.2 Critical points via calculus 162
- A3.3 Critical points via topology 163
- A3.4 The critical curves 164
- A3.5 Absorbing areas 164

Appendix 4 Synonyms 165

Appendix 5 History, Part I 167

- A5.1 Early history 167
- A5.2 Finite difference equations 168
- A5.3 Functional equations 169
- A5.4 Poincaré 170
- A5.5 Independent contemporaries of Poincaré 172
- A5.6 Birkhoff 173
- A5.7 Denjoy 174
- A5.8 The Russian school 174
- A5.9 The Japanese school 176
- A5.10 Conservative systems 176
- A5.11 The American school 178
- A5.12 Numerical methods and applied work 178
- A5.13 Iteration theory 178
- A5.14 The methods of Liapunov 180
- A5.15 Periodic solutions 180
- A5.16 Control theory 180
- A5.17 Other applications 181
- A5.18 Conclusion 181
- A5.19 Historical Bibliography 182

Appendix 6 History, Part 2 209

- A6.1 Introduction 209
- A6.2 G.D. Birkhoff 211
- A6.3 Nonlinear oscillations from 1925 213
- A6.4 The Mandelstam-Andronov school 215
- A6.5 The Bogoliubov (or Kiev) school 224
- A6.6 Poincaré's analyticity theorem 225
- A6.7 Myrberg's contribution 227
- A6.8 Conclusion 229

Appendix 7 Domains of the Figures 231

Bibliography 235

- Frequently used references by code 235
- Bibliography by author 236

Index 245
