PREFACE	vii
INTRODUCTION	xi
1. <i>An introduction to the theory of several complex variables</i>	
1. Fundamentals of the Local Theory	1
2. Hartogs' Theorem and Holomorphic Continuation	11
3. Singular Points of Holomorphic Functions	19
4. Elementary Bounds for Holomorphic Functions	38
References and Additional Reading	43
2. <i>Harmonic functions in $(p + 2)$ variables</i>	
Introduction	44
1. Harmonic Functions of Three Variables	45
2. The Bergman–Whittaker Operator	50
3. Location of Singularities of Harmonic Functions	62
4. Other Operators Generating Harmonic Functions in Three Variables	71
5. Harmonic Functions in Four Variables	75
6. Harmonic Functions in $N \geq 5$ Variables	82
7. The Elliptic Operator T_{p+2}	86
References and Additional Reading	105
3. <i>Elliptic differential equations in two variables with analytic coefficients</i>	
Introduction	106
1. Bergman's Integral Operator of the First Kind	107
2. Analytic Computations of the Bergman E -Function	113
3. Fundamental Solutions, Initial Value, and Boundary Value Problems	121
4. The Complex Riemann Function: Vekua's Approach	131
5. Existence Theorems for Nonlinear Equations	154
References and Additional Reading	164

4. Singular partial differential equations	
1. Integral Operators for Axially Symmetric Potentials	165
2. Analytic Properties of Generalized Axially Symmetric Potentials	172
3. GASPT Functions with Entire and Meromorphic Associates	183
4. Generalized Axially Symmetric Elliptic Partial Differential Equations in Normal Form	195
5. The Generalized Biaxially Symmetric Helmholtz Equation (GBSHE)	202
6. The Generalized Biaxially Symmetric Schrödinger Equation (GBSSE)	223
7. The Generalized Axially Symmetric Helmholtz Equation in $(N + 1)$ Variables (GASHN)	229
8. Weinstein's Theory of Singular Differential Equations	241
References and Additional Reading	246
5. Applications of integral operators to scattering problems	
1. Potential Scattering in Quantum Mechanics	247
2. A Generalized Potential Scattering Problem	262
3. Single Channel Scattering of Particles with Spin	266
4. Inelastic Scattering and Multichannel Theory	275
5. Relativistic Scattering	277
6. The Inverse Scattering Problem	293
References and Additional Reading	296
References	297
SUBJECT INDEX	309
