CHAPTER 1. FUNCTIONAL ANALYSIS AND DISTRIBUTIONS 1 1. Introduction 1 2. Locally Convex Spaces 1 3. The Space 𝒯 7 4. Differentiation in 𝒯' (R¹) 14 6. The Spaces 𝒪, 𝒪, 𝒪', 𝓔' and the Fourier Transform 16 7. Tensor Products and Convolution 20 8. Topologies in 𝓔' and 𝓔'—Duality Theory 28 9. Regularization 37 10. Some Functional Analysis 38 11. Vector-Valued Distributions and Integration 45 CHAPTER 2. ELLIPTIC THEORY 1. Introduction 57 2. Unbounded Operators—Sobolev Spaces 58 3. Forms and Operators 62 4. Some Linear Elliptic Results Following Lions-Magenes 67 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 80 7. Some Remarks on Compactness 86 8. The Calculus of Variations Following F. Browder 89 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 103 1. Introduction 103 2. Examples from P	Introduction	vii
1. Introduction 2. Locally Convex Spaces 3. The Space ℒ 4. Differentiation in ℒ and Examples 5. Differentiation in ℒ (R¹) 6. The Spaces ℰ, ℋ, ℰ, ℋ and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in ℒ and ℰ — Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 6. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 124 1. Evolution Operators and Integral Equations 124 1. Evolution Operators and Integral Equations 125 1. Evolution Operators and Integral Equations 126 127 128 129 129 120 120 121 121 122 123 124 125 126 127 127 128 128 129 129 120 120 120 120 121 121 122 122 122 123 124 125 126 127 127 127 128 127 128 128 128 129 129 120 120 120 120 120 120 121 121 121 122 122	CHAPTER 1. FUNCTIONAL ANALYSIS AND DISTRIBUTIONS	1
2. Locally Convex Spaces 3. The Space ∅ 4. Differentiation in ∅' and Examples 5. Differentiation in ∅' (R¹) 6. The Spaces ℰ, ℐ, ℰ', ℐ' and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in ∅' and ℰ'—Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134		1
3. The Space 𝒯 4. Differentiation in 𝒯' and Examples 5. Differentiation in 𝒯' (R¹) 6. The Spaces 𝒪, 𝒯, 𝒪, 𝑓, 𝑓 and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in 𝒯' and 𝓔 — Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration 45 CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 6. Monotonicity—Hemi- and Demicontinuity 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 9. Variational Methods and Monotone Operators 1. Introduction 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134	2. Locally Convex Spaces	
4. Differentiation in \mathscr{D}' and Examples 5. Differentiation in \mathscr{D}' (R ¹) 6. The Spaces $\mathscr{E}, \mathscr{S}, \mathscr{E}', \mathscr{S}'$ and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in \mathscr{D}' and \mathscr{E}' —Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 57 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 62 4. Some Linear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 7. Examples from Physics 9. Lintroduction 10. Introduction 10. Introduction 11. Introduction 12. Examples from Physics 13. Survey of Hyperbolic and Parabolic Ideas 14. Vector-Valued Ordinary Differential Equations 15. Evolution Operators and Integral Equations 134		
5. Differentiation in \mathscr{D}' (R ¹) 6. The Spaces $\mathscr{E}, \mathscr{S}, \mathscr{E}', \mathscr{S}'$ and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in \mathscr{D}' and \mathscr{E}' —Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	4. Differentiation in \mathcal{D}' and Examples	
6. The Spaces & & & & & and the Fourier Transform 7. Tensor Products and Convolution 8. Topologies in & and & Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134		
7. Tensor Products and Convolution 8. Topologies in ②′ and ℰ′—Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 7. CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134		
8. Topologies in \mathscr{D}' and \mathscr{E}' —Duality Theory 9. Regularization 10. Some Functional Analysis 11. Vector-Valued Distributions and Integration 45 CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 57 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 62 4. Some Linear Elliptic Results Following F. Browder 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations		
9. Regularization 37 10. Some Functional Analysis 38 11. Vector-Valued Distributions and Integration 45 CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 57 2. Unbounded Operators—Sobolev Spaces 58 3. Forms and Operators 62 4. Some Linear Elliptic Results Following Lions—Magenes 67 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 80 7. Some Remarks on Compactness 86 8. The Calculus of Variations Following F. Browder 89 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 103 1. Introduction 103 2. Examples from Physics 103 3. Survey of Hyperbolic and Parabolic Ideas 116 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134	8. Topologies in \mathcal{D}' and \mathscr{E}' —Duality Theory	
10. Some Functional Analysis 11. Vector-Valued Distributions and Integration 45 CHAPTER 2. ELLIPTIC THEORY 57 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 67 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134		
11. Vector-Valued Distributions and Integration CHAPTER 2. ELLIPTIC THEORY 1. Introduction 2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 6. Monotonicity—Hemi- and Demicontinuity 7. Monotonicity—Hemi- and Demicontinuity 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 1. Introduction 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	10. Some Functional Analysis	
1. Introduction 57 2. Unbounded Operators—Sobolev Spaces 58 3. Forms and Operators 62 4. Some Linear Elliptic Results Following Lions—Magenes 67 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 80 7. Some Remarks on Compactness 86 8. The Calculus of Variations Following F. Browder 89 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 103 1. Introduction 103 2. Examples from Physics 103 3. Survey of Hyperbolic and Parabolic Ideas 116 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134		45
2. Unbounded Operators—Sobolev Spaces 3. Forms and Operators 4. Some Linear Elliptic Results Following Lions—Magenes 5. Monotonicity—Hemi- and Demicontinuity 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	CHAPTER 2. ELLIPTIC THEORY	57
3. Forms and Operators 4. Some Linear Elliptic Results Following Lions-Magenes 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	1. Introduction	57
3. Forms and Operators 4. Some Linear Elliptic Results Following Lions-Magenes 5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	2. Unbounded Operators—Sobolev Spaces	58
5. Monotonicity—Hemi- and Demicontinuity 73 6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134		62
6. Nonlinear Elliptic Theory Following F. Browder 7. Some Remarks on Compactness 8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134	4. Some Linear Elliptic Results Following Lions-Magenes	67
7. Some Remarks on Compactness 86 8. The Calculus of Variations Following F. Browder 99. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 103 1. Introduction 103 2. Examples from Physics 103 3. Survey of Hyperbolic and Parabolic Ideas 116 4. Vector-Valued Ordinary Differential Equations 123 5. Evolution Operators and Integral Equations 134	5. Monotonicity—Hemi- and Demicontinuity	73
8. The Calculus of Variations Following F. Browder 9. Variational Methods and Monotone Operators CHAPTER 3. EVOLUTION EQUATIONS I 1. Introduction 2. Examples from Physics 3. Survey of Hyperbolic and Parabolic Ideas 4. Vector-Valued Ordinary Differential Equations 5. Evolution Operators and Integral Equations 134		80
9. Variational Methods and Monotone Operators 97 CHAPTER 3. EVOLUTION EQUATIONS I 103 1. Introduction 103 2. Examples from Physics 103 3. Survey of Hyperbolic and Parabolic Ideas 116 4.
