<b>Preface</b>	<b>xiii</b>
<b>Notation</b>	<b>xv</b>
<b>Introduction</b>	<b>xvii</b>
<b>1 Examples and Motivation</b>	<b>1</b>
1.1 Nonlinear Equations and Dynamical Systems . . . . .	1
1.2 Examples from Population Dynamics . . . . .	3
1.2.1 Stable and Unstable Equilibria . . . . .	3
1.2.2 A Set of Bifurcation Points . . . . .	4
1.2.3 A Cusp Catastrophe . . . . .	7
1.2.4 A Hopf Bifurcation . . . . .	10
1.3 An Example from Combustion Theory . . . . .	15
1.3.1 Finite Element Discretization . . . . .	15
1.3.2 Finite Difference Discretization . . . . .	19
1.3.3 Numerical Continuation: Motivation by an Example . . . . .	20
1.4 An Example of Symmetry Breaking . . . . .	21
1.5 Linear and Nonlinear Stability . . . . .	24
1.6 Exercises . . . . .	27
<b>2 Manifolds and Numerical Continuation</b>	<b>29</b>
2.1 Manifolds . . . . .	29
2.1.1 Definitions . . . . .	29
2.1.2 The Tangent Space . . . . .	30
2.1.3 Examples . . . . .	31
2.2 Branches and Limit Points . . . . .	32
2.3 Numerical Continuation . . . . .	34
2.3.1 Natural Parameterization . . . . .	34
2.3.2 Pseudoarclength Continuation . . . . .	36
2.3.3 Steplength Control . . . . .	40
2.3.4 Convergence of Newton Iterates . . . . .	42
2.3.5 Some Practical Considerations . . . . .	44
2.4 Notes and Further Reading . . . . .	44

2.5	Exercises	44
<b>3</b>	<b>Bordered Matrices</b>	<b>49</b>
3.1	Introduction: Motivation by Cramer's Rule	49
3.2	The Construction of Nonsingular Bordered Matrices	50
3.3	The Singular Value Inequality	52
3.4	The Schur Inverse as Defining System for Rank Deficiency	57
3.5	Invariant Subspaces of Parameter-Dependent Matrices	59
3.6	Numerical Methods for Bordered Linear Systems	61
3.6.1	Backward Stability	61
3.6.2	Algorithm BEM for One-Bordered Systems	63
3.6.3	Algorithm BEMW for Wider-Bordered Systems	65
3.7	Notes and Further Reading	67
3.8	Exercises	67
<b>4</b>	<b>Generic Equilibrium Bifurcations in One-Parameter Problems</b>	<b>71</b>
4.1	Limit Points	71
4.1.1	The Moore–Spence System for Quadratic Turning Points	72
4.1.2	Quadratic Turning Points by Direct Bordering Methods	73
4.1.3	Detection of Quadratic Turning Points	74
4.1.4	Continuation of Limit Points	75
4.2	Example: A One-Dimensional Continuous Brusselator	75
4.2.1	The Model and Its Discretization	75
4.2.2	Turning Points in the Brusselator Model	78
4.3	Classical Methods for the Computation of Hopf Points	79
4.3.1	Hopf Points	79
4.3.2	Regular Systems with $3N + 2$ Equations	81
4.3.3	Regular Systems with $2N + 2$ Equations	83
4.3.4	Regular Systems with $N + 2$ Equations	84
4.3.5	Zero-Sum Pairs of Real Eigenvalues	85
4.3.6	Hopf Points by Complex Arithmetic	87
4.4	Tensor Products and Bialternate Products	88
4.4.1	Tensor Products	88
4.4.2	Condensed Tensor Products	89
4.4.3	The Natural Involution in $\mathbb{C}^n \times \mathbb{C}^n$	92
4.4.4	The Bialternate Product of Matrices	92
4.4.5	The Jordan Structure of the Bialternate Product Matrix	95
4.5	Hopf Points with Bialternate Product Methods	101
4.5.1	Reconstruction of the Eigenstructure	103
4.5.2	Double Borders and Detection of Double Hopf Points	104
4.6	Computation of Hopf Points: Examples	105
4.6.1	Zero-Sum Pairs of Eigenvalues in the Catalytic Oscillator Model	105
4.6.2	The Clamped Hodgkin–Huxley Equations	106
4.6.3	Discretization and Generalized Eigenvalue Problems	107
4.7	Notes and Further Reading	110

4.8	Exercises	111
<b>5</b>	<b>Bifurcations Determined by the Jordan Form of the Jacobian</b>	<b>117</b>
5.1	Bogdanov–Takens Points and Their Generalizations	117
5.1.1	Introduction	117
5.1.2	Numerical Computation of BT Points	118
5.1.3	Local Analysis of BT Matrices	121
5.1.4	Transversality and Genericity	125
5.1.5	Test Functions for BT Points	127
5.1.6	Example: A Curve of BT Points in the Catalytic Oscillator Model	127
5.2	ZH Points and Their Generalizations	127
5.2.1	Transversality and Genericity for Simple Hopf	128
5.2.2	Transversality and Genericity for ZH	131
5.2.3	Detection of ZH Points	131
5.3	DH Points and Resonant DH Points	132
5.3.1	Introduction	132
5.3.2	Defining Functions for Multiple Hopf Points	132
5.3.3	Branch Switching at a DH Point	136
5.3.4	Resonant DH Points	137
5.3.5	The Stratified Set of Hopf Points Near a Point with One-to-One Resonance	142
5.4	Example: The Lateral Pyloric Neuron	146
5.5	Notes and Further Reading	150
5.6	Exercises	150
<b>6</b>	<b>Singularity Theory</b>	<b>155</b>
6.1	Contact Equivalence of Nonlinear Mappings	155
6.2	The Numerical Lyapunov–Schmidt Reduction	156
6.3	Classification of Singularities by Codimension	163
6.3.1	Introduction and Basic Properties	163
6.3.2	Singularities from $\mathbb{R}$ into $\mathbb{R}$	165
6.3.3	Singularities from $\mathbb{R}^2$ into $\mathbb{R}$	165
6.3.4	Singularities from $\mathbb{R}^2$ into $\mathbb{R}^2$	172
6.3.5	A Table of $\mathcal{K}$ -Singularities	173
6.3.6	Example: Intersection of a Surface with Its Tangent Plane	174
6.3.7	Example: A Point on a Rolling Wheel	175
6.4	Unfolding Theory	176
6.5	Example: The Continuous Flow Stirred Tank Reactor	185
6.5.1	Description of the Model	186
6.5.2	Numerical Computation of a Cusp Point	187
6.5.3	The Universal Unfolding of a Cusp Point	189
6.5.4	Example: Unfolding a Cusp in the CSTR	192
6.5.5	Pairs of Nondegeneracy Conditions: An Example	195
6.6	Numerical Methods for $\mathcal{K}$ -Singularities	195
6.6.1	The Codimension-1 Singularity from $\mathbb{R}$ into $\mathbb{R}$	196

6.6.2	Singularities from $\mathbb{R}$ into $\mathbb{R}$ with Codimension Higher than 1 . . . . .	201
6.6.3	Singularities from $\mathbb{R}^2$ into $\mathbb{R}$ . . . . .	204
6.6.4	Singularities from $\mathbb{R}^2$ into $\mathbb{R}^2$ . . . . .	206
6.7	Notes and Further Reading . . . . .	209
6.8	Exercises . . . . .	209
<b>7</b>	<b>Singularity Theory with a Distinguished Bifurcation Parameter</b>	<b>213</b>
7.1	Singularities with a Distinguished Bifurcation Parameter . . . . .	214
7.2	Classification of $(\lambda - \mathcal{K})$ -Singularities from $\mathbb{R}$ into $\mathbb{R}$ . . . . .	214
7.3	Classification of $(\lambda - \mathcal{K})$ -Singularities from $\mathbb{R}^2$ into $\mathbb{R}^2$ . . . . .	216
7.4	Numerical Methods for $(\lambda - \mathcal{K})$ -Singularities . . . . .	219
7.4.1	Numerical Methods for $(\lambda - \mathcal{K})$ -Singularities with Corank 1 . . . . .	220
7.4.2	Numerical Methods for $(\lambda - \mathcal{K})$ -Singularities with Corank 2 . . . . .	222
7.5	Interpretation of Simple Singularities with Corank 1 . . . . .	222
7.6	Examples in Low-Dimensional Spaces . . . . .	225
7.6.1	Winged Cusps in the CSTR . . . . .	225
7.6.2	An Eutrophication Model . . . . .	226
7.7	Example: The One-Dimensional Brusselator . . . . .	229
7.7.1	Computational Study of a Curve of Equilibria . . . . .	229
7.7.2	Computational Study of a Curve of Turning Points . . . . .	231
7.7.3	Computational Study of a Curve of Hysteresis Points . . . . .	234
7.7.4	Computational Study of a Curve of Transcritical Bifurcation Points . . . . .	236
7.7.5	A Winged Cusp on a Curve of Pitchfork Bifurcations . . . . .	237
7.7.6	A Degenerate Pitchfork on a Curve of Pitchfork Bifurcations . . . . .	239
7.7.7	Computation of Branches of Cusp Points and Quartic Turning Points . . . . .	240
7.8	Numerical Branching . . . . .	242
7.8.1	Simple Bifurcation Point and Isola Center . . . . .	243
7.8.2	Cusp Points in $\mathcal{K}$ -Singularity Theory . . . . .	243
7.8.3	Transcritical and Pitchfork Bifurcations in $(\lambda - \mathcal{K})$ -Singularity Theory . . . . .	247
7.8.4	Branching Point on a Curve of Equilibria . . . . .	248
7.9	Exercises . . . . .	249
<b>8</b>	<b>Symmetry-Breaking Bifurcations</b>	<b>253</b>
8.1	The $\mathbb{Z}_2$ -Case: Corank 1 and Symmetry Breaking . . . . .	254
8.1.1	Basic Results on $\mathbb{Z}_2$ -Equivariance . . . . .	254
8.1.2	Symmetry Breaking on a Branch of Equilibria: Generic Scenario . . . . .	256
8.1.3	The Lyapunov-Schmidt Reduction with Symmetry-Adapted Bordering . . . . .	257
8.1.4	The Classification of $\mathbb{Z}_2$ -Equivariant Germs . . . . .	258
8.1.5	Numerical Detection, Computation, and Continuation . . . . .	260

8.1.6	Branching and Numerical Study of a Nonsymmetric Branch . . . .	262
8.2	The $Z_2$ -Case: Corank 2 and Mode Interaction . . . . .	263
8.2.1	Numerical Example: A Corank-2 Point on a Curve of Turning Points . . . . .	264
8.2.2	Continuation of Turning Points by Double Bordering . . . . .	265
8.2.3	The $Z_2$ -Equivariant Reduction by a Symmetry-Adapted Double Bordering . . . . .	266
8.2.4	Computation of a Corank-2 Point . . . . .	268
8.2.5	Analysis and Computation of the Singularity Properties of a Corank-2 Point . . . . .	269
8.2.6	The $Z_2$ -Equivariant Classification of Corank-2 Points with Distinguished Bifurcation Parameter . . . . .	272
8.3	Rank Drop on a Curve of Singular Points . . . . .	275
8.3.1	Corank-1 Singularities in Two State Variables . . . . .	275
8.3.2	The Case of a Symmetry-Adapted Bordering . . . . .	277
8.3.3	Numerical Example: A Corank-2 Point on a Curve of Cusps . . . .	278
8.4	Other Symmetry Groups . . . . .	280
8.4.1	Symmetry-Adapted Bases . . . . .	280
8.4.2	The Equivariant Branching Lemma . . . . .	283
8.4.3	Example: A System with $D_4$ -Symmetry . . . . .	286
8.4.4	Numerical Implementation . . . . .	290
8.5	Notes and Further Reading . . . . .	292
8.6	Exercises . . . . .	292
<b>9</b>	<b>Bifurcations with Degeneracies in the Nonlinear Terms</b>	<b>295</b>
9.1	Principles of Center Manifold Theory . . . . .	296
9.1.1	The Homological Equation for Dynamics in the Center Manifold . .	297
9.1.2	Normal Form Results . . . . .	298
9.1.3	General Remarks on the Computation . . . . .	301
9.2	Computation of CPs . . . . .	301
9.2.1	The Manifold . . . . .	302
9.2.2	A Minimally Extended Defining System . . . . .	303
9.2.3	A Large Defining System . . . . .	304
9.3	Computation of GH Points . . . . .	306
9.3.1	The Manifold . . . . .	306
9.3.2	A Minimally Extended Defining System . . . . .	307
9.3.3	A Large Defining System . . . . .	308
9.4	Examples . . . . .	311
9.4.1	A Turning Point of Periodic Orbits in the Hodgkin–Huxley Model	311
9.4.2	Bifurcations with High Codimension in the LP-Neuron Model . . .	314
9.4.3	Dynamics of Corruption in Democratic Societies . . . . .	315
9.5	Notes and Further Reading . . . . .	320
9.6	Exercises . . . . .	320

<b>10 An Introduction to Large Dynamical Systems</b>	<b>323</b>
10.1 A Class of One-Dimensional PDEs . . . . .	324
10.1.1 Space Discretization . . . . .	325
10.1.2 Integration by Crank–Nicolson . . . . .	328
10.1.3 B-stability and the Implicit Midpoint Rule . . . . .	332
10.1.4 Numerical Continuation . . . . .	332
10.1.5 Solution of Linear Systems . . . . .	334
10.1.6 Example: The Nonadiabatic Tubular Reactor . . . . .	335
10.2 Bifurcations: Reduction to a Low-Dimensional State Space . . . . .	336
10.3 Notes and Further Reading . . . . .	339
10.4 Exercises . . . . .	340
<b>Bibliography</b>	<b>343</b>
