Contents

Cha	pter 1. Introduction	1
1.1	Overview]
1.2	Examples of Piecewise Monotonic Transforma-	
	tions and the Density Functions of Absolutely	
	Continuous Invariant Measures	2
Cha	pter 2. Preliminaries	7
2.1	Review of Measure Theory	7
	Spaces of Functions and Measures	g
	Functions of Bounded Variation in	
	One Dimension	16
2.4	Conditional Expectations	26
	Problems for Chapter 2	27
Cha	pter 3. Review of Ergodic Theory	29
	Measure-Preserving Transformations	29
	Recurrence and Ergodicity	31
3.3	The Birkhoff Ergodic Theorem	40
3.4	Mixing and Exactness	49
3.5	The Spectrum of the Koopman Operator and the	
	Ergodic Properties of $ au$	52
3.6	Basic Constructions of Ergodic Theory	57
3.7	Infinite and Finite Invariant Measures	67
	Problems for Chapter 3	68
Cha	pter 4. The Frobenius-Perron Operator	74
	Motivation	74
4.2	Properties of the Frobenius-Perron Operator	77
4.3	Representation of the Frobenius-Perron	
	Operator	85
	Problems for Chapter 4	87
Chai	pter 5. Absolutely Continuous Invariant	
-	Measures	96
5.1	Introduction	96
5.2	Existence of Absolutely Continuous Invariant	
	Measures	96
5.3	Lasota-Yorke Example of a Transformation with-	
	out Absolutely Continuous Invariant Measure	102

5.4	Rychlik's Theorem for Transformations with	
	Countably Many Branches	106
	Problems for Chapter 5	108
Chapter 6. Other Existence Results		
6.1	The Folklore Theorem	110
6.2	Rychlik's Theorem for $C^{1+\epsilon}$ Transformations of	
	the Interval	118
6.3	Piecewise Convex Transformations	121
	Problems for Chapter 6	125
Chap	pter 7. Spectral Decomposition of the	
	Frobenius-Perron Operator	127
	Theorem of Ionescu–Tulcea and Marinescu	127
7.2	Quasi-Compactness of Frobenius–Perron	
	Operator	128
7.3	Another Approach to Spectral Decomposition:	
	Constrictiveness	135
	Problems for Chapter 7	138
Cha	pter 8. Properties of Absolutely	
	Continuous Invariant Measures	139
8.1	Preliminary Results	139
8.2	Support of an Invariant Density	140
	Speed of Convergence of the Iterates of $P_{\tau}^{n}f$	147
	Bernoulli Property	148
	Central Limit Theorem	151
8.6	Smoothness of the Density Function	162
	Problems for Chapter 8	166
Chapter 9. Markov Transformations 17		
9.1	Definitions and Notation	174
9.2	Piecewise Linear Markov Transformations and	
	the Matrix Representation of the Frobenius-	
	Perron Operator	175
9.3	Eigenfunctions of Matrices Induced by Piecewise	
	Linear Markov Transformations	178
9.4	Invariant Densities of Piecewise Linear Markov	
	Transformations	180
9.5	Irreducibility and Primitivity of Matrix	
	Representations of Frobenius-Perron Operators	183

9.6	Bounds on the Number of Ergodic Absolutely	
	Continuous Invariant Measures	191
9.7	Absolutely Continuous Invariant Measures that	
	Are Maximal	198
	Problems for Chapter 9	207
Cha	pter 10. Compactness Theorem and	
	Approximation of Invariant Densities	209
10.1	Introduction	209
10.2	Strong Compactness of Invariant Densities	210
	Approximation by Markov Transformations	216
10.4	Application to Matrices: Compactness of	
	Eigenvectors for Certain Non-Negative Matrices	221
Chaj	pter 11. Stability of Invariant Measures	226
11.1	Stability of a Linear Stochastic Operator	226
11.2	Deterministic Perturbations of Piecewise	
	Expanding Transformations	232
11.3	Stochastic Perturbations of Piecewise Expanding	
	Transformations	238
	Problems for Chapter 11	250
Chap	oter 12. The Inverse Problem for the	
	Frobenius-Perron Equation	252
12.1	The Ershov-Malinetskii Result	252
12.2	Solving the Inverse Problem by Matrix Methods	254
Chapter 13. Applications		260
13.1	Application to Random Number Generators	260
13.2	Why Computers Like Absolutely Continuous	
	Invariant Measures	262
13.3	A Model for the Dynamics of a Rotary Drill	270
13.4	A Dynamic Model for the Hipp Pendulum	
	Regulator	282
13.5	Control of Chaotic Systems	286
13.6	Kołodziej's Proof of Poncelet's Theorem	303
	Problems for Chapter 13	309
Solutions to Selected Problems		310
Bibliography		381
