

Table of contents

1-54 R. Bamon and R. Roussarie

Bifurcations: an Introduction

- 1- 1. Introduction
- 4- 2. Preliminary definitions
- 9- 3. Preliminary results: stable singular points
- 10- 4. Configuration of orbits near hyperbolic singular elements
- 14- 5. First examples of bifurcation
- 19- 6. Versal unfoldings for singularities
- 21- 7. Reduction to the center manifold
- 24- 8. Semi-hyperbolic unfoldings
- 28- 9. Normal forms
- 35- 10. Hopf-Takens bifurcation
- 39- 11. Some global bifurcations of codimension 1 on the plane
- 42- 12. The Hopf-Takens bifurcation
- 53- 13. References

55-91 P. Collet

Some ergodic properties of maps of the interval

- 55- I. Introduction
- 57- II. Absolutely continuous invariant measures
- 63- III. Spectral properties of the transfer operator
- 70- IV. Probabilistic results
- 86- V. Entropy and Lyapunov exponent
- 90- References

93- 123 B. Schmitt

Ergodic theory and thermodynamics

of one dimensional Markov expanding endomorphisms

- 93- Introduction
- 94- I. Piecewise expanding markovian endomorphisms: the C^1 case
- 99- II. Piecewise expanding markovian endomorphisms: the C^2 case
- 107- III. Generalised transfer operator; the thermodynamic formalism
- 118- IV. Random endomorphisms
- 122- References

125-149 J.M. Gambaudo

Transition to chaos for surface diffeomorphisms

- 125- I. Introduction
- 127- II. Chaos and horseshoe
- 133- III. Periodic orbits and chaos
- 143- IV. Boundary of chaos
- 148- V. References

151-178 P. Felmer

Variational methods in hamiltonian systems

- 151- 0. Introduction
- 153- 1. Variational formulation of second order hamiltonian systems
- 159- 2. Existence of periodic orbits through minimization
- 163- 3. Existence of heteroclinic orbits through minimization
- 169- 4. Existence of periodic orbits through mountain pass
- 173- 5. Existence of heteroclinic orbits through mountain pass
- 176- References
