Preface to the English Edition	v
Preface to the Third Russian Edition	vii
From the Editors	ix
About the Author and the Editors	xi
Introduction	1
1 Formulation of the Problem	5
1.1 Basic Definitions	5
1.2 Equations of Perturbed Motion	10
1.3 Examples of Derivation of Equations of a Perturbed Motion	14
1.4 Problems	19
2 The Direct Liapunov Method. Autonomous Systems	25
2.1 Liapunov Functions. Sylvester's Criterion	25
2.2 Liapunov's Theorem of Motion Stability	32
2.3 Theorems of Asymptotic Stability	34
2.4 Motion Instability Theorems	43
2.5 Methods of Obtaining Liapunov Functions	47
2.6 Application of Liapunov's Theorem	51
2.7 Application of Stability Theorems	61
2.8 Problems	72

3	Stability of Equilibrium States and Stationary Motions of Conservative Systems	75
3.1	Lagrange's Theorem	75
3.2	Invertibility of Lagrange's Theorem	79
3.3	Cyclic Coordinates. The Routh Transform	80
3.4	Stationary Motion and Its Stability Conditions	83
3.5	Examples	85
3.6	Problems	94
4	Stability in First Approximation	103
4.1	Formulation of the Problem	103
4.2	Preliminary Remarks	104
4.3	Main Theorems of Stability in First Approximation	107
4.4	Hurwitz's Criterion	111
4.5	Examples	115
4.6	Problems	129
5	Stability of Linear Autonomous Systems	133
5.1	Introduction	133
5.2	Matrices and Basic Matrix Operations	134
5.3	Elementary Divisors	141
5.4	Autonomous Linear Systems	150
5.5	Problems	157
6	The Effect of Force Type on Stability of Motion	159
6.1	Introduction	159
6.2	Classification of Forces	160
6.3	Formulation of the Problem	171
6.4	The Stability Coefficients	174
6.5	The Effect of Gyroscopic and Dissipative Forces	176
6.6	Application of the Thomson-Tait-Chetaev Theorems	181
6.7	Stability Under Gyroscopic and Dissipative Forces	189
6.8	The Effect of Nonconservative Positional Forces	197
6.9	Stability in Systems with Nonconservative Forces	207
6.10	Problems	218
7	The Stability of Nonautonomous Systems	221
7.1	Liapunov Functions and Sylvester Criterion	221
7.2	The Main Theorems of the Direct Method	226
7.3	Examples of Constructing Liapunov Functions	229
7.4	System with Nonlinear Stiffness	232
7.5	Systems with Periodic Coefficients	237
7.6	Stability of Solutions of Mathieu-Hill Equations	244
7.7	Examples of Stability Analysis	256
7.8	Problems	263

8	Application of the Direct Method of Liapunov to the Investigation of Automatic Control Systems	313
8.1	Introduction	265
8.2	Differential Equations of Perturbed Motion of Automatic Control Systems	266
8.3	Canonical Equations of Perturbed Motion of Control Systems	269
8.4	Constructing Liapunov Functions	273
8.5	Conditions of Absolute Stability	279
9	The Frequency Method of Stability Analysis	289
9.1	Introduction	289
9.2	Transfer Functions and Frequency Characteristics	290
9.3	The Nyquist Stability Criterion for a Linear System	294
9.4	Stability of Continuously Nonlinear Systems	295
9.5	Examples	298
9.6	Problems	304
	References	307
	Index	317
