List of Figures	x <i>i</i>
List of Tables	xv
Preface	xvii
Chapter 1. Introduction	1
1.1. Small Neural Populations	2
1.2. Delay Differential Equations	2
1.3. Experiment and Theory	5
1.4. Nonlinear Science	6
1.5. Noise	8
Chapter 2. Input-Output Relationships	11
2.1. Neurophysiological Considerations	12
2.2. Integrate-and-Fire Neurons	15
2.3. The Frequency Dilemma	17
Chapter 3. Chance or Chaos?	21
3.1. Mathematical Preliminaries	22
3.2. Exponential Densities	25
3.3. Survival Times	27
3.4. Chaotic versus Stochastic?	30
Chapter 4. Recurrent Inhibition	33
4.1. $\alpha$ -Motoneuron Spike Trains	33
4.2. Inhibitory Loops in the Hippocampus	35
4.3. M-H Model	36
4.4. Simplification of M-H Model	38
4.5. Analysis of M-H Model	40
4.6. Model versus Observation	41
4.7. Spike Timing	44
Chapter 5. Negative Feedback Control	47
5.1. Pupil Light Reflex	48
5.2. L-M Model	50
5.3. Clamped Pupil Light Reflex	54
5.4. Second-Order DDEs	60
5.5. PLR Models	65
Chapter 6. Complex Neural Dynamics	69

6.1. Neural Dynamics	71
6.2. Neural “Bifurcations”	71
6.3. Piecewise Constant Mixed Feedback	72
6.4. Noise or Chaos?	74
6.5. Bistability	77
6.6. Multistability	77
6.7. Experimental Woes	79
Chapter 7. Noise and Neural Dynamics	81
7.1. Noise	82
7.2. Measurement Noise	82
7.3. Critical Slowing Down Phenomena	83
7.4. Noise Amplification	84
7.5. Noise and Oscillation Onset	87
7.6. Stochastic Resonance	88
7.7. Comments	93
Chapter 8. Neural Populations	95
8.1. Neural Traveling Waves	96
8.2. Neural Connectivity	96
8.3. Integrate and Fire Neural Networks	97
8.4. Neural Continuum Equations	99
8.5. Neural Network Equations	102
8.6. Neural Coupled Map Lattices	104
8.7. Experimental Issues	105
8.8. Densities	106
8.9. Cortical Waves?	108
Chapter 9. Concluding Remarks	111
Appendix A. Poisson Processes	113
Bibliography	115
