

CONTENTS

Introduction to the Series	vii
Preface	ix
ONE THE METHOD OF GENERALIZED SPEEDS	1
1.1 Introduction	1
1.2 The Method for a System of Particles	2
1.3 Example	3
1.4 Nonholonomic Constraints	9
1.5 Example	12
1.6 Rigid Bodies	14
1.7 Example	15
1.8 Computer Algebra	24
1.9 Comments	24
1.10 References	26
1.11 Exercises	27
Appendix 1: Derivations	31
Appendix 2: MACSYMA Programs for Deriving Equations of Motion	36
TWO LIE TRANSFORMS	40
2.1 Introduction	40
2.2 The Near-Identity Transformation	42
2.3 The Kamiltonian	43
2.4 Example	44
2.5 Higher Order Approximation	47
2.6 Example	50
2.7 Nonautonomous Hamiltonians and Extended Phase Space	53
2.8 Example	54
2.9 A Two Degree of Freedom System	62
2.10 References	70
2.11 Exercises	72
Appendix 3: MACSYMA Program for Deriving the Kamiltonian	76
Appendix 4: Elliptic Function Solutions	78
Appendix 5: Differential Forms	83

THREE	THE METHOD OF AVERGING	91
3.1	Introduction	91
3.2	The Method of Averaging	93
3.3	Example	96
3.4	Second Order Averaging	98
3.5	Limit Cycles and van der Pol's Equation	103
3.6	Hopf Bifurcations	108
3.7	Nonautonomous Systems	112
3.8	Example	114
3.9	Related Topics	122
3.10	References	123
3.11	Exercises	125
Appendix 6: MACSYMA Program for Second Order Averaging		129
Appendix 7: MACSYMA Program for Third Order Averaging		132
Appendix 8: MACSYMA Program for Averaging in a Nonautonomous System		134
Appendix 9: Averaging with Elliptic Functions		139
Appendix 10: Pade Approximants		150
Appendix 11: The Andronov Bifurcation		158
FOUR	METHODS FOR PREDICTING CHAOS	162
4.1	Introduction	162
4.2	Melnikov's Method	165
4.3	Example	176
4.4	Vakakis' Approach	185
4.5	Chirikov's Method	196
4.6	References	211
4.7	Exercises	212
Appendix 12: Lyapunov Exponents		218
Index		227
