Content

Introduction 1

Chapter I: The Algorithms 4
1.1. A general algorithm 4
1.2. The Cantor series and related expansions 10
1.3. The Oppenheim series 14
1.4. The Balkema-Oppenheim expansion 19

Chapter II: Questions of Rationality and Irrationality 21
2.1. Cantor's series 21
2.2. The Oppenheim series for rational numbers 25
2.3. Miscellaneous rationality criterions 29

Chapter III: Some Concepts and Tools from Probability Theory 32
3.1. Basic concepts 32
3.2. Borel-Cantelli lemmas 36
3.3. Laws of large numbers 43
3.4. Weak convergence 46

Chapter IV: Metric Theory of Representations with Stochastically Independent Digits 50
4.1. Cantor series 50
4.2. q-adic expansions with $q^{n+1} - q^n = 1$ 62
4.3. Lüroth series 66

Chapter V: A Survey on the Applications of Ergodic Theory to Series Representations 70
5.1. Basic concepts and problems of ergodic theory 71
5.2. Piecewise linear transformations 75
5.3. The ergodic theory for some Oppenheim series expansions 80

Chapter VI: Metric Theory in the General Case 83
6.1. Some basic metric theorems 83
6.2. The metric theory of the Oppenheim series 88
6.2.a. The rate of growth of the denominators 88

6.2.b Laws of large numbers 97
6.2.c A central limit theorem 103
6.3. The speed of convergence of series expansions 106

Chapter VII: The Hausdorff Dimension of Certain Sets Related to Series Expansions 110
7.1. Definition of Hausdorff dimension 111
7.2. The evaluation of the Hausdorff dimension of certain sets 114

Chapter VIII: Miscellaneous Topics 120
8.1. Applications 120
8.1.1. Tables for random numbers 121
8.1.2. Subseries of divergent series 122
8.1.3. Series representations and the general theory of sequences uniformly distributed mod 1 125
8.1.4. Record observations in experiments 127
8.2. Further open problems 128
