

Contents

1	Preparations	1
1.1	Convergent and Divergent Series	2
1.1.1	Positive term series	2
1.1.2	Absolute convergence	5
1.1.3	Abel transformation	6
1.1.4	Cauchy product series	10
1.1.5	Double sequence and double series	13
1.1.6	Power series	17
1.1.7	Analytic continuation and Riemann surface	25
1.1.8	Summability of divergent series	28
1.2	Asymptotic Expansions	39
1.2.1	Asymptotic series	39
1.2.2	Asymptotic analysis of integrals	46
1.2.3	Stokes phenomenon	55
1.2.4	Barnes integrals	62
1.3	Linear Difference Equations	72
1.3.1	H. Poincaré-O. Perron theorems	84
1.3.2	Gamma function	98
1.4	Hypergeometric Difference Equation	120
1.5	Modified Gamma Function	147
2	Gauss and Airy Equations	161
2.1	Gauss Equation	161
2.2	Kummer's Connection Formulas	165
2.2.1	Euler's transformation	165
2.2.2	Gauss formula	174
2.2.3	Residue method	185
2.3	Monodromy Groups	193
2.4	Associated Fundamental Function	199
2.5	Airy Equation	206
3	Linear Differential Equations	219
3.1	Remarks on Holomorphic Functions	219
3.1.1	Holomorphy	220
3.1.2	Cauchy integral formula and Taylor expansion	221

3.2	Existence Theorems of Differential Equations	223
3.2.1	Formal procedure	224
3.2.2	Convergence of formal solutions	225
3.2.3	Picard-Lindelöf's Method	228
3.3	Classification of Singularities	236
3.4	Regular Singular Point	240
3.4.1	Frobenius method	243
3.4.2	Fuchsian differential equation	251
3.5	Irregular Singular Point	261
3.5.1	Existence of actual solutions	267
4	Reduction Problems	291
4.1	Reduction to Hypergeometric System	291
4.1.1	Hypergeometric equation	292
4.1.2	Algorithm of reduction	298
4.1.3	Characteristic exponents	308
4.2	Reduction to Birkhoff Canonical System	314
4.2.1	Birkhoff and Schlesinger systems	314
4.2.2	Extended Bessel equation	325
4.3	Algebraic Manipulation	327
5	Monodromy Groups for Hypergeometric Systems	337
5.1	Extended Gauss Formula	337
5.2	Calculation of Monodromy Groups	353
5.3	Monodromy Group in Logarithmic Case	367
5.3.1	Gauss equation	367
5.3.2	Generalized hypergeometric equation	370
6	Connection Problem for Hypergeometric Systems	377
6.1	General Theory	377
6.1.1	Determination of connection coefficients	379
6.1.2	Barnes-integral	384
6.1.3	Examples	387
6.2	H. Galbrun Theory	391
6.3	Hierarchy of Connection Coefficients	408
6.4	Jordan-Pochhammer Equation	412
6.5	Appell Hypergeometric Functions	424
6.6	Frobenius Theorem	441
7	Stokes Phenomenon	447
7.1	Two Point Connection Problem	448
7.2	Associated Fundamental Function	455
7.3	Extended Bessel Equation	465
7.3.1	An extended Airy function of the first kind	475
7.3.2	Boundary value problem	481
7.3.3	Kummer equation	487

7.4	Derivatives of Stokes Multipliers	493
7.5	Multi-point Connection Problem	500
	Bibliography	515
	Index	523
