Preface vii

Chapter 1. Introduction 1

1-1	GENERAL INTRODUCTION	1
1-2	INTRODUCTION TO CONTROL SYSTEMS	2
1-3	DEFINITIONS	3
1-4	HISTORICAL BACKGROUND	5
1-5	MATHEMATICAL BACKGROUND	10
1-6	GENERAL NATURE OF THE ENGINEERING CONTROL PROBLEM	11
1-7	OUTLINE OF TEXT	12

Chapter 2. Methods of Writing Differential Equations 14

2-1	INTRODUCTION	14
2-2	ELECTRIC CIRCUITS AND COMPONENTS	16
2-3	MECHANICAL TRANSLATION SYSTEMS	21
2-4	ANALOGOUS CIRCUITS	25
2-5	MECHANICAL ROTATIONAL SYSTEMS	26
2-6	THERMAL SYSTEMS	31
2-7	HYDRAULIC LINEAR ACTUATOR	35
2-8	POSITIVE-DISPLACEMENT ROTATIONAL HYDRAULIC TRANSMISSION	39
2-9	ROTATING POWER AMPLIFIERS	41
2-10	D-C SERVOMOTOR	44
2-11	A-C SERVOMOTOR	47
2-12	LAGRANGE'S EQUATION	49
2-13	CONCLUSIONS	57

Chapter 3. Solution of Differential Equations 59

3-1	INTRODUCTION	59
3-2	INPUT TO CONTROL SYSTEMS	60

3-3	STANDARDIZED INPUTS	60
3-4	STEADY-STATE RESPONSE: SINUSOIDAL INPUT	61
3-5	STEADY-STATE RESPONSE: POWER-SERIES INPUT	64
3-6	TRANSIENT RESPONSE: CLASSICAL METHOD	69
3-7	DEFINITION OF TIME CONSTANT	74
3-8	EXAMPLE: FIRST-ORDER SYSTEM	75
3-9	EXAMPLE: SECOND-ORDER SYSTEM—MECHANICAL	76
3-10	EXAMPLE: SECOND-ORDER SYSTEM—ELECTRICAL	78
3-11	SECOND-ORDER TRANSIENTS	80
3-12	TIME-RESPONSE SPECIFICATIONS	83
3-13	CONCLUSIONS	84

Chapter 4. Laplace Transforms 86

4-1	INTRODUCTION	86
4-2	DEFINITION OF THE LAPLACE TRANSFORM	87
4-3	DERIVATION OF LAPLACE TRANSFORMS OF SIMPLE FUNCTIONS	88
4-4	LAPLACE-TRANSFORM THEOREMS	89
4-5	APPLICATION OF THE LAPLACE TRANSFORM TO DIFFERENTIAL EQUATIONS	92
4-6	INVERSE TRANSFORMATION	94
4-7	HEAVISIDE PARTIAL-FRACTION EXPANSION THEOREMS	95
4-8	EXAMPLE OF INVERSE TRANSFORMATION	103
4-9	PARTIAL-FRACTION SHORTCUTS	104
4-10	GRAPHICAL DETERMINATION OF PARTIAL- FRACTION COEFFICIENTS	106
4-11	USE OF THE SPIRULE	113
4-12	FREQUENCY RESPONSE FROM THE POLE-ZERO DIAGRAM	115
4-13	LOCATION OF POLES AND STABILITY	120
4-14	ROUTH'S STABILITY CRITERION	121
4-15	REGIONAL LOCATION OF ROOTS	127
4-16	LAPLACE TRANSFORM OF THE IMPULSE FUNCTION	130
4-17	RESPONSE TO AN IMPULSE FUNCTION	131
4-18	SECOND-ORDER SYSTEM WITH IMPULSE EXCITATION	133
4-19	CONCLUSIONS	134

Chapter 5. Block Diagrams; Transfer Functions; Flow Graphs **136**

5-1	INTRODUCTION: BLOCK DIAGRAMS	136
5-2	EXAMPLES OF BLOCK DIAGRAMS	137
5-3	SUMMATION POINTS IN BLOCK DIAGRAMS	142
5-4	DEFINITION OF THE TRANSFER FUNCTION	143
5-5	BLOCKS IN CASCADE	144
5-6	COMBINATION OF CASCADE BLOCKS	146
5-7	DETERMINATION OF CONTROL RATIO	147
5-8	TERMINOLOGY FOR FEEDBACK CONTROL SYSTEMS	149
5-9	SPEED CONTROL USING MOTOR-GENERATOR CONTROL UNIT	150
5-10	TRANSFER FUNCTION AND BLOCK DIAGRAM OF A D-C MOTOR-GENERATOR CONTROL	150
5-11	AIRCRAFT CONTROL SYSTEM	153
5-12	HYDRAULIC POSITION CONTROL SYSTEM	156
5-13	TRANSFER FUNCTIONS OF COMPENSATING NETWORKS	158
5-14	SIGNAL FLOW GRAPHS	161
5-15	CONCLUSIONS	167

Chapter 6. Basic Servo Characteristics **169**

6-1	INTRODUCTION	169
6-2	MATHEMATICAL AND PHYSICAL FORMS	170
6-3	TYPES OF FEEDBACK SYSTEMS	171
6-4	ANALYSIS OF SYSTEM TYPES	173
6-5	EXAMPLES OF TYPES OF SYSTEMS	179
6-6	STATIC ERROR COEFFICIENTS	186
6-7	USE OF STATIC ERROR COEFFICIENTS	190
6-8	CONCLUSIONS	194

Chapter 7. Root Locus **195**

7-1	INTRODUCTION	195
7-2	PLOTTING ROOTS OF A CHARACTERISTIC EQUATION	197
7-3	QUALITATIVE ANALYSIS OF THE ROOT LOCUS	200
7-4	PROCEDURE OUTLINE	204
7-5	OPEN-LOOP TRANSFER FUNCTION	205
7-6	POLES OF THE CONTROL RATIO	206
7-7	APPLICATION OF THE MAGNITUDE AND ANGLE CONDITIONS	208

7-8	GEOMETRICAL PROPERTIES (CONSTRUCTION RULES)	213
7-9	EXAMPLE 1	230
7-10	EXAMPLE 2	235
7-11	FREQUENCY RESPONSE	240
7-12	PERFORMANCE CHARACTERISTICS	241
7-13	SYNTHESIS	247
7-14	SUMMARY OF ROOT-LOCUS CONSTRUCTION RULES FOR NEGATIVE FEEDBACK	248
7-15	CONCLUSIONS	249
Chapter 8. Specialized Pole-Zero Topics		251
8-1	INTRODUCTION	251
8-2	TRANSIENT RESPONSE—DOMINANT COMPLEX POLES	252
8-3	ADDITIONAL SIGNIFICANT POLES	257
8-4	CORRELATION OF POLE-ZERO DIAGRAM WITH FREQUENCY AND TIME RESPONSES	260
8-5	FACTORING OF POLYNOMIALS BY USE OF ROOT LOCUS (PARTITION METHOD)	263
8-6	EXISTENCE AND LOCATION OF BREAKWAY AND BREAK-IN POINTS (PARTITION METHOD)	270
8-7	ROOT-LOCUS PLOTS FOR PARAMETER VARIATION OTHER THAN GAIN	273
Chapter 9. Frequency Response		278
9-1	INTRODUCTION	278
9-2	CORRELATION OF THE SINUSOIDAL AND TIME RESPONSES	279
9-3	TYPES OF PLOTS	280
9-4	FREQUENCY-RESPONSE CURVES	281
9-5	INTRODUCTION TO LOGARITHMIC PLOTS	283
9-6	DEFINITIONS OF LOGARITHMIC TERMS	284
9-7	GENERAL FREQUENCY-TRANSFER-FUNCTION RELATIONSHIPS	286
9-8	DRAWING THE LOG MAGNITUDE AND PHASE DIAGRAM	287
9-9	EXAMPLE OF DRAWING THE LOG MAGNITUDE AND PHASE DIAGRAM	296
9-10	SYSTEM TYPE AND GAIN AS RELATED TO LOG MAGNITUDE CURVES	299

9-11	EXPERIMENTAL DETERMINATION OF TRANSFER FUNCTIONS	302
9-12	INTRODUCTION TO POLAR PLOTS	303
9-13	DIRECT POLAR PLOTS	303
9-14	SUMMARY OF DIRECT POLAR PLOTS	313
9-15	INVERSE POLAR PLOTS	316
9-16	SUMMARY OF INVERSE POLAR PLOTS	318
9-17	DEAD TIME	320
9-18	CONCLUSIONS	321
Chapter 10. Nyquist's Stability Criterion		323
10-1	INTRODUCTION	323
10-2	DEVELOPMENT OF NYQUIST'S STABILITY CRITERION	324
10-3	EXAMPLES OF NYQUIST'S CRITERION APPLIED TO DIRECT POLAR PLOT	333
10-4	NYQUIST'S STABILITY CRITERION APPLIED TO SYSTEMS HAVING DEAD TIME	337
10-5	REGIONAL LOCATION OF ROOTS	339
10-6	NYQUIST'S STABILITY CRITERION APPLIED TO THE INVERSE POLAR PLOTS	340
10-7	EXAMPLES OF NYQUIST'S CRITERION APPLIED TO THE INVERSE POLAR PLOTS	342
10-8	DEFINITIONS OF PHASE MARGIN AND GAIN MARGIN AND THEIR RELATION TO STABILITY	344
10-9	STABILITY CHARACTERISTICS OF THE LOG MAGNITUDE AND PHASE DIAGRAM	347
10-10	LOG MAGNITUDE-ANGLE DIAGRAM	348
10-11	STABILITY FROM THE LOG MAGNITUDE-ANGLE DIAGRAM	349
10-12	EFFECT ON STABILITY OF THE ADDITION OF A POLE OR ZERO	351
10-13	CONCLUSIONS	352
Chapter 11. Feedback Control System Performance Based on the Frequency Response		354
11-1	INTRODUCTION	354
11-2	DIRECT POLAR PLOT	354
11-3	DETERMINATION OF M_m AND ω_m FOR A SIMPLE SECOND-ORDER SYSTEM	356
11-4	CORRELATION OF SINUSOIDAL AND TIME RESPONSES	360

11-5	DEVELOPMENT OF CONSTANT $M(\omega)$ AND $\alpha(\omega)$ CONTOURS OF $C(j\omega)/R(j\omega)$ ON THE COMPLEX PLANE (DIRECT PLOT)	361
11-6	CONTOURS IN THE INVERSE POLAR PLANE	374
11-7	GAIN SETTING BY USE OF THE CONTOURS FOR DIRECT AND INVERSE POLAR PLOTS	379
11-8	GAIN ADJUSTMENT FOR A DESIRED M_m OF A UNITY FEEDBACK SYSTEM: DIRECT POLAR PLOT	379
11-9	GAIN ADJUSTMENT FOR A DESIRED M_m OF A UNITY FEEDBACK SYSTEM: INVERSE POLAR PLOT	382
11-10	CONSTANT M AND α CURVES ON THE LOG MAGNITUDE-ANGLE DIAGRAM (NICHOLS CHART)	385
11-11	ADJUSTMENT OF GAIN BY USE OF THE LOG MAGNITUDE-ANGLE DIAGRAM	388
11-12	CLOSED-LOOP FREQUENCY RESPONSE FROM THE LOG MAGNITUDE-ANGLE DIAGRAM	390
11-13	GAIN ADJUSTMENT FOR A DESIRED M_m OF A NONUNITY FEEDBACK SYSTEM	391
11-14	CONCLUSIONS	392
Chapter 12. Cascade Compensation: Root Locus		394
12-1	INTRODUCTION	394
12-2	RESHAPING THE ROOT LOCUS	395
12-3	IDEAL INTEGRAL COMPENSATION	397
12-4	LAG COMPENSATION USING PASSIVE ELEMENTS	398
12-5	IDEAL DERIVATIVE COMPENSATION	404
12-6	LEAD COMPENSATION USING PASSIVE ELEMENTS	407
12-7	GENERAL LEAD-COMPENSATOR DESIGN	412
12-8	LAG-LEAD COMPENSATION	416
12-9	COMPARISON OF CASCADE COMPENSATORS	419
12-10	SPECIAL PROBLEMS	422
12-11	OTHER COMPENSATORS	424
12-12	REALIZATION OF TRANSFER FUNCTIONS	426
12-13	CONCLUSIONS	428
Chapter 13. Cascade Compensation: Frequency-response Plots		431
13-1	INTRODUCTION	431
13-2	RESHAPING THE FREQUENCY RESPONSE PLOT	432
13-3	SELECTION OF A COMPENSATOR	433

13-4	LAG COMPENSATOR	437
13-5	EXAMPLE OF LAG COMPENSATION	440
13-6	LEAD COMPENSATION	445
13-7	EXAMPLE OF LEAD COMPENSATION APPLIED TO A TYPE 1 SYSTEM	447
13-8	LAG-LEAD COMPENSATION	452
13-9	EXAMPLE OF LAG-LEAD COMPENSATION	454
13-10	EXAMPLE OF LEAD COMPENSATION APPLIED TO A TYPE 2 SYSTEM	458
13-11	CONCLUSIONS	462

Chapter 14. Feedback Compensation 465

14-1	INTRODUCTION	465
14-2	ENVIRONMENTAL CONDITIONS (SENSITIVITY)	467
14-3	TIME OF RESPONSE	470
14-4	FEEDBACK-COMPENSATOR LOCATION	472
14-5	RESTRICTION ON FEEDBACK COMPONENTS	473
14-6	TRANSFORMING NON-TYPE 0 CONTROL ELEMENTS TO TYPE 0	474
14-7	FEEDBACK COMPENSATION USING THE ROOT LOCUS: DESIGN PROCEDURES	475
14-8	SIMPLIFIED TACHOMETER FEEDBACK COMPENSATION (ROOT LOCUS)	476
14-9	TACHOMETER FEEDBACK (ROOT LOCUS)	478
14-10	TACHOMETER PLUS RC FEEDBACK (ROOT LOCUS)	482
14-11	RESULTS OF FEEDBACK COMPENSATION USING THE ROOT LOCUS	486
14-12	FEEDBACK COMPENSATION USING POLAR PLOTS: DESIGN PROCEDURES	486
14-13	TACHOMETER FEEDBACK (INVERSE POLAR PLOT)	488
14-14	TACHOMETER PLUS RC FEEDBACK (INVERSE POLAR PLOT)	491
14-15	RESULTS OF FEEDBACK COMPENSATION USING THE INVERSE POLAR PLOT	494
14-16	FEEDBACK COMPENSATION USING LOG PLOTS	499
14-17	APPLICATION OF FEEDBACK COMPENSATION (LOG PLOTS)	503
14-18	RESULTS OF FEEDBACK COMPENSATION USING THE LOGARITHMIC PLOTS	507

Chapter 15. Complex Control Systems	509	
15-1	INTRODUCTION	509
15-2	MULTIPLE-LOOP CONTROL SYSTEMS WITH A SINGLE DESIRED INPUT	510
15-3	A COMPLEX CONTROL SYSTEM	512
15-4	INTERCOUPLED MULTIPLE-LOOP CONTROL SYSTEMS	515
15-5	MULTIPLE INPUTS	517
15-6	TREATMENT OF UNWANTED DISTURBANCES	518
15-7	EXAMPLE OF MINIMIZING AN UNWANTED DISTURBANCE	521
15-8	FEED FORWARD COMPENSATION	526
15-9	CONDITIONAL FEEDBACK SYSTEMS	528
15-10	PRINCIPLE OF INVARIANCE	531
15-11	PRELIMINARY SYNTHESIS OF A COMPLEX MULTILoop CONTROL SYSTEM	532
15-12	MULTILOOP SYNTHESIS EXAMPLE: LATERAL AIRCRAFT CONTROL SYSTEM	537
15-13	ANALYSIS OF COMPLEX MULTILOOP CONTROL SYSTEM BY THE ROOT LOCUS METHOD	541
15-14	CONCLUSIONS	551
Chapter 16. A-C Feedback Control Systems	553	
16-1	INTRODUCTION	553
16-2	GENERAL TYPES OF FEEDBACK CONTROL	554
16-3	HYBRID CONTROL SYSTEM	558
16-4	A-C CONTROL SYSTEM	562
16-5	A-C COMPENSATORS	565
16-6	DESIGN OF A-C LEAD COMPENSATORS	568
16-7	CONCLUSIONS	580
Chapter 17. Optimum Response	582	
17-1	INTRODUCTION	582
17-2	DEVELOPMENT OF THE SOLUTION-TIME CRITERION	583
17-3	CONTROL-AREA CRITERION	585
17-4	ADDITIONAL CRITERIA	586
17-5	DEFINITION OF ZERO ERROR SYSTEMS	588
17-6	ZERO STEADY-STATE STEP ERROR SYSTEMS	589
17-7	ZERO STEADY-STATE RAMP ERROR SYSTEMS	592
17-8	OPTIMIZATION BASED ON OPEN-LOOP PARAMETERS	594
17-9	CONCLUSIONS	595

Chapter 18. Nonlinearities and Describing Functions	597
18-1 INTRODUCTION	597
18-2 CONTINUOUS NONLINEARITIES	599
18-3 TYPES OF NONLINEARITIES	600
18-4 DESCRIBING FUNCTIONS	603
18-5 EXAMPLES OF DESCRIBING FUNCTIONS	606
18-6 EFFECT OF NONLINEARITIES ON STABILITY	615
18-7 STABILITY USING THE DIRECT POLAR PLOT	618
18-8 STABILITY USING THE LOG PLOT	619
18-9 STABILITY USING THE ROOT LOCUS	621
18-10 ACCURACY OF DESCRIBING-FUNCTION PREDICTIONS	627
18-11 MULTIPLICATIVE SYSTEMS	627
18-12 CONCLUSIONS	629
Chapter 19. Analog Computers	631
19-1 INTRODUCTION	631
19-2 ANALOG-COMPUTER COMPONENTS	633
19-3 ANALOG-COMPUTER SETUP	637
19-4 SIMULATION OF NONLINEARITIES	640
19-5 TIME-SCALE CHANGES	644
19-6 USE OF THE ANALOG COMPUTER	644
19-7 DESIGN PROBLEMS	653
19-9 CONCLUSIONS	657
Chapter 20. Experimental and Design Procedures	659
20-1 INTRODUCTION	659
20-2 STATEMENT OF THE PROBLEM	660
20-3 DETERMINATION OF SYSTEM CONSTANTS BY THE FREQUENCY-RESPONSE METHOD	660
20-4 DETERMINATION OF SYSTEM CONSTANTS BY TRANSIENT TESTING METHODS	662
20-5 EVALUATION OF $G(s)$ FROM THE CLOSED-LOOP TRANSIENT RESPONSE	668
20-6 ANALYSIS OF THE BASIC SYSTEM	671
20-7 SELECTION OF A CASCADE COMPENSATOR	675
20-8 CONCLUSIONS	681
Chapter 21. State of the Art	683
21-1 INTRODUCTION	683

	21-2	ADAPTIVE SYSTEMS	684
	21-3	SAMPLED-DATA SYSTEMS	687
	21-4	CONCLUSIONS	695
Appendix A.		<i>Table of Laplace-transform pairs</i>	697
	B.	<i>Methods of factoring polynomials (root solving)</i>	700
	C.	<i>Standard block-diagram terminology</i>	710
	D.	<i>The spirule</i>	714
	E.	<i>Angle to a search point near the real axis which is produced by complex poles and zeros</i>	722
