TABLE OF CONTENTS

		Page
CHAPTER 1	INTRODUCTION	1
	Finite dimensional linear systems theory	2
	The quadratic control problem (regulator problem)	3
	The filtering problem	4
	The stochastic quadratic control problem	5
	Examples of infinite dimensional systems	6
CHAPTER 2	SEMIGROUP THEORY	10
	Strongly continuous semigroups	10
	The infinitesimal generator of a semigroup	14
	Hille-Yosida Theorem	17
	Dual semigroups	25
	Inhomogeneous differential equations	29
	Analytic semigroups	33
	Perturbation theory	37
	Mild evolution operators	41
	Quasi-evolution operators	43
	Abstract evolution equations	44
CHAPTER 3	CONTROLLABILITY, OBSERVABILITY, AND STABILITY	51
	Exact controllability	51
	Approximate controllability	60
	Exact null controllability	68
	Approximate null controllability	69
	Observability concepts	69
	Duality theorem	71
	Exponential stabilizability	72
CHAPTER 4	QUADRATIC COST CONTROL PROBLEM	85
	Regulator problem	85
	Integral Riccati equation	88
	Differential Riccati equation	93
	Examples	96
	Tracking problem	102
	Infinite time quadratic cost control problem	107

Page

CHAPTER 5 STOCHASTIC PROCESSES AND STOCHASTIC DIFFERENTIAL EQUATIONS 118
Abstract probability and estimation theory 118
Stochastic processes and stochastic integration 126
Stochastic evolution equations 143
Examples 149

CHAPTER 6 THE STATE ESTIMATION PROBLEM 158
The filtering problem 158
Stability of the filter 170
Smoothing and prediction estimators 175
Differential forms for the estimators 180
Examples 183
Extensions 188

CHAPTER 7 THE SEPARATION PRINCIPLE FOR STOCHASTIC OPTIMAL CONTROL 194
Admissible controls 194
Optimal control for complete observations 200
Separation principle for incomplete observations 204
Examples 207

CHAPTER 8 UNBOUNDED CONTROL AND SENSING IN DISTRIBUTED SYSTEMS 212
Motivation 212
General conditions 216
Perturbation results 223
Controllability, observability, and stabilizability 230
The quadratic cost control problem 235
The estimation problem 244

CHAPTER 9 TIME DEPENDENT SYSTEMS 252
Perturbation theory for mild evolution operators 253
Examples 262
Abstract evolution equations 269
The quadratic cost control problem 271
State estimation 278
Stochastic optimal control 282
Concluding remarks 283
