<b>Introduction</b>	<b>1</b>
<b>1 Vector Fields, Algebras and Groups Generated by a System of Ordinary Differential Equations and their Properties</b>	<b>13</b>
1.1. The system of differential equations and its generating Lie algebra . . . . .	13
1.1.1. Basic definitions . . . . .	13
1.1.2. Examples . . . . .	17
1.2. Lie series as the solution of the system of ordinary differential equations and its properties. The generating group of the system . . . . .	18
1.2.1. Basic properties of Lie series . . . . .	18
1.2.2. Pointwise transformations . . . . .	25
1.2.3. On a connection between generating Lie algebras of a system and certain groups . . . . .	28
1.3. The change of variables in a differential system. Campbell-Hausdorff formula . . . . .	35
1.3.1. The technique for variable change . . . . .	35
1.3.2. Variable changes using Lie series. The Lie transformation . . . . .	37
1.4. Lie theory of systems of ordinary differential equations admitting a group of transformations . . . . .	38
1.4.1. Basic definitions and the theorem on invariance . . . . .	38
1.4.2. What does the knowledge of the algebra of symmetry of a system give for its integration? . . . . .	40
1.4.3. Lie's result on the reduction of an arbitrary algebra of the symmetry of a system to finite algebra . . . . .	42
1.4.4. Examples . . . . .	44
1.4.5. Connection of above mentioned results on invariance with Lie's theory of extended operators . . . . .	47
<b>2 Decomposition of Systems of Ordinary Differential Equations</b>	<b>51</b>
2.1. Algebraic reducibility of systems of linear ordinary differential equations with variable coefficients . . . . .	51
2.1.1. Principal definitions and theorems . . . . .	51
2.1.2. Basic and auxiliary statements . . . . .	54
2.1.3. The main algorithm. Examples . . . . .	67

2.2.	A generalized linear method for the decomposition of a differential system to block triangular form . . . . .	70
2.2.1.	Formulation of the problem . . . . .	70
2.2.2.	The Danilevsky's method . . . . .	71
2.2.3.	Method of decomposition by a nilpotent component . . . . .	76
2.2.4.	The generalized linear method . . . . .	83
2.3.	The algebraic reducibility of systems of linear differential equations with variable coefficients, the matrices of which commute with their integral . . . . .	85
2.4.	Decomposition of systems of nonlinear differential equations . . . . .	88
2.4.1.	Formulation of the problem . . . . .	88
2.4.2.	Some auxiliary statements . . . . .	90
2.4.3.	The principal theorems . . . . .	94
2.4.4.	Examples . . . . .	99
2.5.	Reduction of the number of variables in the system of ordinary differential equations . . . . .	101
2.5.1.	Formulation of the problem . . . . .	101
2.5.2.	The principal theorems . . . . .	102
2.5.3.	Dynamical motions of a satellite . . . . .	103
2.6.	Algebraically reducible systems . . . . .	106
2.6.1.	Formulation of the problem and principal theorems . . . . .	106
2.6.2.	A group-theoretical view to the results . . . . .	107
2.6.3.	Certain mechanical models . . . . .	109
<b>3</b>	<b>Asymptotic decomposition of systems of ordinary differential equations with a small parameter</b> . . . . .	<b>115</b>
3.1.	The general scheme of the asymptotic decomposition algorithm . . . . .	115
3.1.1.	The main algorithm . . . . .	115
3.1.2.	The centralized system and its group-theoretical properties . . . . .	119
3.1.3.	Two approaches in the construction of the centralized system . . . . .	120
3.2.	Basic theorems on the integration of the centralized system . . . . .	121
3.2.1.	Results related to the separation of motions . . . . .	121
3.2.2.	Results related to the separation of variables into fast and slow . . . . .	125
3.3.	Reduction of operator equations to differential equations . . . . .	129
3.3.1.	Reduction of operator equations to the Jacobian systems . . . . .	129
3.3.2.	Various approaches to solving the Jacobian systems arrived at via various methods of nonlinear mechanics . . . . .	131
3.4.	Realization of an asymptotic decomposition algorithm in the domain of the existing first integrals of a system of zero approximation . . . . .	133
3.4.1.	Formulation of the problem . . . . .	133
3.4.2.	Construction of the domain $H_0(x)$ . . . . .	133
3.4.3.	Investigation of the asymptotic decomposition algorithm . . . . .	135
3.5.	Substantiation of the asymptotic decomposition algorithm for a finite number of approximations . . . . .	143
3.5.1.	Shortened transformations and the centralized system of $m$ approximations . . . . .	143

3.5.2. Justification of the asymptotic decomposition algorithm basing on Poincaré's theorem . . . . .	145
3.6. The asymptotic method of separation of variables by Krylov, Bogoliubov and Mitropolsky (KBM method) and the asymptotic decomposition method . . . . .	151
3.6.1. General remarks . . . . .	151
3.6.2. Systems of the standard form. The Bogoliubov projector . . . . .	152
3.6.3. Systems of nonlinear mechanics with several fast variables . . . . .	156
<b>4 Asymptotic Decomposition of Almost Linear Systems of Differential Equations with Constant Coefficients and Perturbations in the Form of Polynomials</b> . . . . .	<b>159</b>
4.1. The generating algebras $\mathcal{B}$ and $\tilde{\mathcal{B}}$ of the initial system . . . . .	159
4.1.1. Passing to the matrix of a simple structure . . . . .	159
4.1.2. General settings . . . . .	160
4.1.3. The structure of the operators of the system of zero approximation . . . . .	161
4.2. Reduction of the solution of operator equations to a solution of a system of algebraic equations . . . . .	163
4.2.1. Basic equations . . . . .	163
4.2.2. Three approaches to the solution of the basic equations . . . . .	164
4.3. Construction of a centralized system and finding the reducing transformations . . . . .	165
4.3.1. The basic algorithm . . . . .	165
4.3.2. The existence conditions of nonzero projections . . . . .	167
4.4. The structure of a centralized system. The basic theorems on decomposition and separation of motions . . . . .	168
4.4.1. The basic theorem . . . . .	168
4.4.2. Separation of variables in the centralized system . . . . .	169
4.4.3. Some other results . . . . .	175
4.4.4. A sufficient criterion of decomposability . . . . .	177
4.5. Models based on Lotka-Volterra system . . . . .	181
4.6. Models based on the Van der Pol system . . . . .	194
4.7. A model of the point motion on a sphere . . . . .	208
4.8. The asymptotic decomposition and the normal form methods . . . . .	215
4.8.1. The normal form method . . . . .	215
4.8.2. Comparison of normal form and asymptotic decomposition methods . . . . .	216
<b>5 Asymptotic Decomposition of Differential Systems with Small Parameter in the Representation Space of Finite-dimensional Lie Group</b> . . . . .	<b>219</b>
5.1. Formulation of the problem . . . . .	219
5.2. An asymptotic decomposition algorithm in a representation space of a finite-dimensional Lie group . . . . .	222

5.2.1.	Group-theoretical properties of the system of zero approximation . . . . .	222
5.2.2.	The main algorithm. Reduction of operator equations to systems of linear algebraic equations . . . . .	223
5.2.3.	Some results on the separation of variables in a centralized system . . . . .	228
5.2.4.	Advantages of passing from general linear group $GL(n)$ to its subgroup $\mathcal{G}(\mathcal{B}_h)$ . . . . .	229
5.3.	Models connected with $SO(2)$ . . . . .	230
5.4.	The motion of a point on a sphere (a model of the motion connected with $SO(3)$ ) . . . . .	234
5.5.	Dynamical maneuvers of a satellite (perturbed motion on $SO(2) \times SO(3) \times SO(3)$ ) . . . . .	240
5.6.	Almost invariant systems of differential equations with a compact Lie group of invariance . . . . .	248
5.6.1.	Formulation of the problem . . . . .	248
5.6.2.	The main algorithm . . . . .	250
5.6.3.	Examples . . . . .	255
<b>6</b>	<b>Asymptotic Decomposition of Differential Systems where Zero Approximation has Special Properties</b> . . . . .	<b>259</b>
6.1.	Systems of zero approximation having a known symmetry algebra . . . . .	259
6.1.1.	Formulation of the problem . . . . .	259
6.1.2.	Basic theorems . . . . .	261
6.1.3.	Example . . . . .	264
6.2.	Asymptotic decomposition algorithm when zero approximation is decomposable . . . . .	267
6.2.1.	Basic assumptions about the system of zero approximation . . . . .	267
6.2.2.	Conditions of decomposability for a perturbed system . . . . .	268
6.3.	Linear systems with constant coefficients and a small parameter . . . . .	276
6.3.1.	Algorithm realization . . . . .	276
6.3.2.	The centralized system is always decomposable . . . . .	277
6.3.3.	The case of decomposability of the zero approximation . . . . .	281
6.3.4.	A model of a mechanical system . . . . .	286
6.4.	The general case of the structure of a matrix of zero approximation system . . . . .	295
6.4.1.	Formulation of the problem and realization of the asymptotic decomposition algorithm . . . . .	295
6.4.2.	Basic theorems . . . . .	298
6.5.	Method of local asymptotic decomposition . . . . .	299
6.5.1.	Dynamics of flying apparatus . . . . .	300
6.5.2.	A model of gas dynamics . . . . .	303

<b>7 Asymptotic Decomposition of Pfaffian Systems with a Small Parameter</b>	<b>305</b>
7.1. Reduction of the general problem of integration of a partial differential equation system to that of a Pfaffian system . . . . .	305
7.1.1. The equivalence of the integration problem for a partial differential equation system and that for a Pfaffian system . . . . .	305
7.1.2. The perturbation problem for a Pfaffian system . . . . .	309
7.2. Asymptotic decomposition of completely integrable Pfaffian systems with a small parameter . . . . .	310
7.2.1. Formulation of the problem and the main algorithm . . . . .	310
7.2.2. Theorems on the integration of the centralized system . . . . .	313
7.2.3. Justification of the asymptotic decomposition algorithm . . . . .	316
7.2.4. Not completely integrable systems . . . . .	319
7.3. Searching for integrals of a Pfaffian system in involution . . . . .	320
7.3.1. The chain of integral elements . . . . .	320
7.3.2. Theorems on integration of the centralized system . . . . .	326
7.4. Asymptotic decomposition of a Pfaffian system, which is in involution, with a small parameter . . . . .	329
7.4.1. The reduction of the general problem to the perturbation problem for completely integrable systems . . . . .	329
7.4.2. Model of a Pfaffian system for a wave equation . . . . .	331
<b>Appendix</b>	<b>339</b>
A: Lie series and Lie transformation . . . . .	339
B: The direct product of matrices . . . . .	342
B1: Definition . . . . .	342
B2: Systems of matrix equations . . . . .	342
C: Conditions for the solvability of systems of linear equations . . . . .	342
D: Elements of Lie group analysis of differential equations on the basis of the theory of extended operators . . . . .	345
D1: One-parameter group and its infinitesimal operator . . . . .	345
D2: Theory of extension . . . . .	346
