

CONTENTS

Forward	v
Chapter 1. Contact Manifolds, Ideals and Partial Differential Equations	1
1. The Space of Independent Variables	1
2. Graph Space	3
3. The First Order Contact Manifold	5
4. Fundamental Ideals and Partial Differential Equations	7
5. Contact Manifolds and Fundamental Ideals of Higher Order	11
6. Isoectors, Lie Algebras, and Families of Solution Maps	15
7. Explicit Characterization of Isoectors of Contact Ideals	23
8. Symmetries that are Not Prolongations	30
9. Balance Equations when $R = N$	33
Chapter 2. An Order Independent Method of Characteristics	45
1. Introduction and Preview	45
2. The Extension Operator on the Lie Manifold of a Vector Field	51
3. Characteristic Solutions of PDE that are Determined by a Closed Ideal	58
4. Problems with First Order Contact 1-forms	62
5. Problems with Several Dependent Variables	72
6. Higher Order Equations	81
7. Comparison with Group Invariant (Similarity) Solutions	86
Chapter 3. Horizontal Ideals, Foliations, and Solutions	91
1. Canonical Systems of Vector Fields	92
2. Reformulation in terms of Horizontal and Vertical Ideals	97
3. Closure Conditions and the Resulting Foliation Structures	105
4. A Basic Existence Theorem for Systems of PDE	116
5. Reduction by Isoectors of the Balance Ideal	121
6. Examples with $N = 1$ and $n = 2$	132
7. Inverse Problems	145
8. Analysis of Second Order Systems of PDE in K_1	150

Chapter 4. Primitive Integrals, Isoectors, and Resolutions	161
1. Primitive Integrals and Constraints	162
2. Isoectors of the Horizontal Ideal	167
3. Vector Space Properties	171
4. Lie Algebra Properties	173
5. Transport Properties	177
6. Resolutions	180
7. Existence of Solutions to the System (2.3)	184
8. Isoectors of Horizontal Ideals on K_2	188
9. Systems that Admit Specified First Integrals	189
Chapter 5. Extended Canonical Transformations	211
1. Extended Canonical Transformations for First Order Contact Manifolds	211
2. Examples with $n = 2$	220
3. Extended Canonical Transformations of K_2	226
4. Group Properties	228
5. An Extended Hamilton-Jacobi Method	237
6. One Parameter Families of Transformations	252
7. Auto-Balance Transformations and the Generation of Solutions	269
8. Solutions of the Navier-Stokes Equations	278
Appendix A. An Alternative Treatment of Extended Canonical Transformations	291
A1. Extended Canonical Transformations	291
A2. Group Properties	295
Appendix B. Multiple Integral Variational Problems	303
B1. Formulation of the Problem	303
B2. An Existence Theorem for Euler-Lagrange Equations	306
B3. Aspects Particular to Variational Problems	312
References	319
Index	323
