

Table of contents

| | |
|---|----|
| Preface | xi |
| 1 Introduction: how to use this book | 1 |
| 1.1 Views of mathematics | 1 |
| 1.2 Why models? | 2 |
| 1.3 Three themes | 4 |
| 1.4 Activity and joy | 5 |
| 1.5 Computing | 7 |
| 2 Discrete dynamics | 9 |
| 2.1 The Malthus model | 9 |
| 2.2 The Verhulst model | 15 |
| 2.3 Second-order linear difference equations | 18 |
| 2.4 Pairs of populations | 21 |
| 2.5 The 'battle' problem | 24 |
| 2.6 Linear dynamical systems on the plane | 29 |
| 3 Growth and decay; some calculus models | 33 |
| 3.1 The Malthus model again | 33 |
| 3.2 The battle problem | 37 |
| 3.3 Some portraits of systems | 42 |
| 3.4 Uncoupled systems | 44 |
| 3.5 Summary: the algorithm | 49 |
| 4 Calculus and some classical models | 51 |
| 4.1 Introduction: the derivative | 51 |
| 4.2 What is a tangent to a graph? | 52 |
| 4.3 Local maxima and minima | 55 |
| 4.4 The mean value theorem | 60 |
| 4.5 Integration | 61 |

| | | |
|----------|--|------------|
| 4.6 | Some first-order differential equations | 65 |
| 4.7 | Simple harmonic motion: planetary orbits | 72 |
| 4.8 | Linear differential equations of the second order | 79 |
| 4.9 | Proof of the algorithm | 84 |
| 4.10 | Modelling mathematics within mathematics | 87 |
| 4.11 | The exponential of a matrix | 89 |
| 5 | Plane curves | 94 |
| 5.1 | What is a plane curve? | 94 |
| 5.2 | Regularity | 97 |
| 5.3 | Parallel curves | 98 |
| 5.4 | Arc-length | 100 |
| 5.5 | Curvature | 102 |
| 5.6 | Envelopes | 106 |
| 5.7 | Caustics | 113 |
| 5.8 | Polar coordinates | 118 |
| 5.9 | Complex numbers: the Argand diagram | 121 |
| 6 | Control space and phase space: polynomial functions | 126 |
| 6.1 | Quadratic functions: the control plane | 126 |
| 6.2 | Cubic functions | 129 |
| 6.3 | Construction of galleries | 131 |
| 6.4 | Formulae for the roots of cubic equations | 138 |
| 6.5 | Discriminants | 142 |
| 6.6 | Polynomial functions | 147 |
| 6.7 | Variation of roots with coefficients | 149 |
| 7 | Quadratics, conics, and quadrics | 151 |
| 7.1 | Introduction | 151 |
| 7.2 | Conics | 151 |
| 7.3 | Quadratic forms | 158 |
| 7.4 | Eigenvalues and eigenvectors | 161 |
| 7.5 | The standard form of a matrix | 167 |
| 7.6 | Lagrange's reduction process | 169 |
| 7.7 | Quadrics | 173 |
| 8 | Contours: the implicit function theorem | 177 |
| 8.1 | Contours and the implicit function theorem | 177 |
| 8.2 | Three variables | 184 |
| 8.3 | Constructing the portrait of a function | 187 |
| 8.4 | Cubic polynomials | 191 |
| 9 | Non-linear models | 200 |
| 9.1 | Two-population extensions of Verhulst's equation | 200 |
| 9.2 | Existence of trajectories: Hamiltonians | 207 |
| 9.3 | The three rules | 211 |
| 9.4 | The trajectory routine | 215 |
| 9.5 | Closed trajectories | 218 |

| | | |
|-----------|--|------------|
| 9.6 | The Poincaré–Bendixson theorem | 223 |
| 9.7 | Sketching the Lotka–Volterra system | 224 |
| 9.8 | The van der Pol and Liénard equations | 229 |
| 9.9 | The Hopf bifurcation | 235 |
| 10 | Discrete non-linear dynamics | 238 |
| 10.1 | Staircases and cobwebs | 238 |
| 10.2 | The Verhulst equation | 242 |
| 10.3 | The Maynard Smith equation | 249 |
| 10.4 | Change of stability | 256 |
| 10.5 | Periodic orbits | 259 |
| 10.6 | Cantor sets and the shift mapping | 260 |
| 10.7 | Differential equations and chaos | 263 |
| 10.8 | Fixed points: local theory | 267 |
| 10.9 | The Mandelbrot set | 270 |
| 10.10 | Self-similar fractals | 275 |
| 11 | Catastrophe sets in modelling | 277 |
| 11.1 | Introduction | 277 |
| 11.2 | The cusp catastrophe | 278 |
| 11.3 | Potentials | 282 |
| 11.4 | The catastrophe machine | 284 |
| 11.5 | Decay of civilizations | 288 |
| 11.6 | Compromise | 290 |
| 11.7 | The umbilics | 292 |
| 11.8 | The elliptic umbilic | 298 |
| 11.9 | Thom’s theorem | 301 |
| A | Using technology to help gain mathematical insights | 303 |
| A.1 | Introduction | 303 |
| A.2 | Techniques for iteration | 304 |
| A.3 | Converting programs between versions of BASIC | 307 |
| A.4 | Other software for mathematics | 312 |
| B | Linear mathematics in \mathbb{R}^3 | 314 |
| B.1 | Matrices and equations in the plane | 314 |
| B.2 | The space \mathbb{R}^3 | 316 |
| B.3 | The scalar product | 319 |
| B.4 | Matrix multiplication in \mathbb{R}^2 | 320 |
| B.5 | Lines in space | 323 |
| B.6 | The vector product | 324 |
| B.7 | Determinants | 325 |
| B.8 | Intersections | 327 |
| B.9 | Linear transformations | 328 |
| B.10 | Matrix multiplication | 331 |
| C | The exponential function and its relatives | 335 |
| C.1 | The logarithm and exponential functions | 335 |

| | | |
|--|--|------------|
| C.2 | The Taylor–Maclaurin expansion | 339 |
| C.3 | The function cis | 342 |
| C.4 | Continuous functions | 347 |
| C.5 | Monotonicity | 349 |
| D | Functions of several variables | 358 |
| D.1 | Partial differentiation | 358 |
| D.2 | Continuity | 361 |
| D.3 | The formula for small increments | 362 |
| D.4 | The chain rule | 364 |
| D.5 | The Taylor–Maclaurin expansion in several variables | 370 |
| D.6 | Maxima and minima | 373 |
| D.7 | Three variables | 378 |
| D.8 | When is F independent of x ? | 380 |
| E | Smooth mappings, diffeomorphisms, and integration | 382 |
| E.1 | Smooth mappings | 382 |
| E.2 | Bijections | 383 |
| E.3 | Local diffeomorphisms | 385 |
| E.4 | Saddles and centres revisited | 389 |
| E.5 | Modelling resemblances by diffeomorphisms | 390 |
| E.6 | How can we integrate $F(x, y)$? | 393 |
| E.7 | Line integrals | 396 |
| E.8 | The winding number | 398 |
| E.9 | Vector fields | 401 |
| F | Norms, sequences, and contracting mappings | 407 |
| F.1 | Norms | 407 |
| F.2 | Convergence | 408 |
| F.3 | The contracting mapping theorem in \mathbb{R}^2 | 411 |
| F.4 | Metric spaces | 413 |
| F.5 | Application to the construction of fractals | 417 |
| Appendix: Mathematical notation | | 419 |
| References | | 422 |
| List of programs | | 426 |
| Index | | 428 |
