## CONTENTS

List of Publications xi

**General Introduction: The Worlds of Science** 1

**Section A. Fundamental Issues in Hydrodynamics, Condensed Matter and Field Theory**

**From Level to Level** 7

1. On Two Levels [114] 11
2. Hydrodynamic Equations and Correlation Functions [11] 13
   (*with P. C. Martin*)
3. The Electron-Phonon Interaction in Normal and Superconducting Metals [17] 64
4. Wave Function Fluctuations in Finite Superconductors [29] 100
5. The Application of Renormalization Group Techniques to Quarks and Strings [58] 104
6. Disorder Variables and Para-Fermions in Two-Dimensional Statistical Mechanics [74] 134
   (*with E. Fradkin*)
7. Computational Physics: Pluses and Minuses [115] 149
8. Cathedrals and Other Edifices [117] 151
9. From Neutrinos to Quasiparticles [124] 153

**Section B. Scaling and Phase Transitions**

**On the Joys of Creation** 157

1. Scaling Laws for Ising Models Near $T_c$ [22] 165
2. Static Phenomena Near Critical Points: Theory and Experiment [26] 175
   (*with W. Götze, D. Hamblen, R. Hecht, E. A. S. Lewis, V. V. Palciauskas, M. Rayl, J. Swift, D. Aspnes, and J. W. Kane*)
3. Transport Coefficients Near Critical Points [30] 212
4. The Droplet Model and Scaling [38] 217
5. Critical Behavior. Universality and Scaling [39] 222
6. Scaling, Universality and Operator Algebras [54] 240
7. Teaching the Renormalization Group [62] 274
   (*with H. J. Maris*)
8. Scaling and Universality in Statistical Physics [135] 280

**Section C. Simulations, Urban Studies, and Social Systems**

**Models and Arguments** 297

1. Computer Display and Analysis of Urban Information Through Time and Space [37] 301
   (*with J. R. Voss and W. J. Bouknight*)
2. From Simulation Model to Public Policy: An Examination of Forrester's "Urban Dynamics" [42] 328
3. Public Policy Conclusions from Urban Growth Models [46] 336
   (*with H. Weinblatt*)
4. A Simulation Model of Urban Labor Markets and Development Policy [51] 343
   (*with B. Harrison and B. Chinitz*)
5. The Big, the Bad and the Beautiful [127] 378
6. Hard Times [152] 380

**Section D. Turbulence and Chaos**

**Questions without Answers** 385

1. Roads to Chaos [93] 391
2. Chaos: A View of Complexity in the Physical Sciences [113] 399
3. From Periodic Motion to Unbounded Chaos: Investigations of the Simple Pendulum [99] 430
4. Escape from Strange Repellers [96] 435
   (*with C. Tang*)
5. Global Universality at the Onset of Chaos: Results of a Forced Rayleigh-Benard Experiment [106] 439
   (*with M. H. Jensen, A. Libchaber, I. Procaccia and J. Stavans*)
6. Fractal Measures and Their Singularities: The Characterization of Strange Sets [109] 443
   (*with T. C. Halsey, M. H. Jensen, I. Procaccia, and B. I. Shraiman*)
7. Fractals: Where's the Physics [110] 454
8. Scaling and Multiscaling (Fractals and Multifractals) [141] 456
9. Complex Analytic Methods for Viscous Flows in Two Dimensions [107] 484
   (*with D. Bensimon, S. Liang, B. I. Shraiman, and C. Tang*)
10. On Complexity [119] 516
11. Interactive Computation for Undergraduates [131] 518
12. Scaling and Structures in the Hard Turbulence Region of Rayleigh Benard Convection [134] 520

13. Turbulence dans une Boîte [147] 528
(*with A. Libchaber, E. Moses and G. Zocchi*)
14. Complex Structures from Simple Systems [149] 537
15. Bubble, Bubble, Boil and Trouble [151] 539
(*with D. H. Rothman*)

Numbers in brackets refer to the numbers in the list of publications on pp. xi–xvii.
