

CONTENTS

CHAPTER 1:	INTRODUCTION TO DYNAMICAL SYSTEMS WITH SATURATION NONLINEARITIES	1
1.1	Dynamical Systems and Saturation Nonlinearities	1
1.2	Control Systems with Saturation Nonlinearities	4
1.3	Digital Filters with Overflow Corrections	5
1.4	Feedback Neural Networks and Associative Memories	6
PART I		
	QUALITATIVE THEORY OF CONTROL SYSTEMS WITH CONTROL CONSTRAINTS AND STATE SATURATION: TWO FUNDAMENTAL ISSUES	9
CHAPTER 2:	INTRODUCTION TO PART I	11
2.1	Concepts of Stability and Lyapunov Functions	11
2.2	Principal Lyapunov Stability Theorems	16
2.3	Controllability	17
CHAPTER 3:	ASYMPTOTIC STABILITY OF DYNAMICAL SYSTEMS WITH STATE SATURATION	20
3.1	Introduction to Continuous-Time Systems	20
3.2	Notation	22
3.3	Main Result for Continuous-Time Systems	23
3.4	Introduction to Discrete-Time Systems	27
3.5	A General Result for Discrete-Time Systems	29
3.6	Results Involving Quadratic Form Lyapunov Functions	31

3.7	Examples.....	34
3.8	Concluding Remarks.....	35
CHAPTER 4:	NULL CONTROLLABILITY OF DISCRETE-TIME DYNAMICAL SYSTEMS WITH CONTROL CONSTRAINTS AND STATE SATURATION.....	37
4.1	Introduction.....	37
4.2	Main Results.....	39
4.3	Examples.....	44
4.4	Concluding Remarks.....	49
PART II		
	STABILITY ANALYSIS OF ONE-DIMENSIONAL AND MULTIDIMENSIONAL STATE-SPACE DIGITAL FILTERS WITH OVERFLOW NONLINEARITIES.....	51
CHAPTER 5:	INTRODUCTION TO PART II.....	53
5.1	Fixed-Point Digital Filters and Overflow Nonlinearities.....	53
5.2	Limit Cycles in Fixed-Point Digital Filters.....	56
5.3	Multidimensional Digital Filters.....	58
CHAPTER 6:	CRITERIA FOR THE ABSENCE OF OVERFLOW OSCILLATIONS IN FIXED-POINT DIGITAL FILTERS USING GENERALIZED OVERFLOW CHARACTERISTICS.....	60
6.1	Introduction.....	60
6.2	Some Existing Results.....	61
6.3	Digital Filters Using Saturation Arithmetic.....	62
6.4	Digital Filters Using Generalized Overflow Characteristics.....	64
6.5	Algorithms for Determining the Matrix H	71
6.6	Examples.....	75
6.7	Concluding Remarks.....	76

CHAPTER 7:	STABILITY ANALYSIS OF STATE-SPACE REALIZATIONS FOR MULTIDIMENSIONAL FILTERS WITH OVERFLOW NONLINEARITIES.....	77
7.1	Introduction	77
7.2	General Results for Two-Dimensional Digital Filters	79
7.3	Main Result for Two-Dimensional Digital Filters.....	93
7.4	Multidimensional Digital Filters with Overflow Nonlinearities	96
7.5	Examples.....	99
7.6	Concluding Remarks.....	101
PART III		
	ANALYSIS AND SYNTHESIS OF A CLASS OF NEURAL NETWORKS WITH INTERCONNECTION CONSTRAINTS WITH APPLICATIONS TO ASSOCIATIVE MEMORIES	103
CHAPTER 8:	INTRODUCTION TO PART III.....	105
8.1	Models of Feedback Neural Networks	105
8.2	Design Methods for Associative Memories.....	108
8.3	Analog VLSI Implementations and Problems	110
8.4	Cellular Neural Networks.....	111
CHAPTER 9:	ANALYSIS AND SYNTHESIS OF A CLASS OF NEURAL NETWORKS WITH PIECEWISE LINEAR SATURATION ACTIVATION FUNCTIONS.....	114
9.1	Introduction	114
9.2	Notation.....	116
9.3	Analysis Results.....	117
9.4	Synthesis Procedures	123
9.5	An Example	127
9.6	Concluding Remarks	130

CHAPTER 10: SPARSELY INTERCONNECTED NEURAL NETWORKS FOR ASSOCIATIVE MEMORIES WITH APPLICATIONS TO CELLULAR NEURAL NETWORKS	131
10.1 Introduction	131
10.2 Sparse Design Procedures	133
10.3 Applications to Cellular Neural Networks	138
10.4 Examples	140
10.5 Chinese Character Recognition	147
10.6 Concluding Remarks	152
CHAPTER 11: ROBUSTNESS ANALYSIS OF A CLASS OF SPARSELY INTERCONNECTED NEURAL NETWORKS WITH APPLICATIONS TO THE DESIGN PROBLEM	154
11.1 Introduction	154
11.2 Robustness Analysis	155
11.3 Applications to the Design Problem	159
11.4 Examples	166
11.5 Concluding Remarks	175
CLOSING REMARKS	177
BIBLIOGRAPHY	178
ABOUT THE AUTHORS	190
