## TABLE OF CONTENTS

Preface . . . . .	vii
Introduction . . . . .	ix
<b>Chapter I: Infinite Dimensional Morse Theory</b>	
1. A Review of Algebraic Topology . . . . .	1
2. A Review of the Banach-Finsler Manifold . . . . .	14
3. Pseudo Gradient Vector Field and the Deformation Theorems .	19
4. Critical Groups and Morse Type Numbers . . . . .	32
5. Gromoll-Meyer Theory . . . . .	43
6. Extensions of Morse Theory . . . . .	54
6.1. Morse Theory Under General Boundary Conditions . . . . .	55
6.2. Morse Theory on a Locally Convex Closed Set . . . . .	60
7. Equivariant Morse Theory . . . . .	65
7.1. Preliminaries . . . . .	66
7.2. Equivariant Deformation . . . . .	67
7.3. The Splitting Theorem and the Handle Body Theorem for Critical Manifolds . . . . .	69
7.4. G-Cohomology and G-Critical Groups . . . . .	74
<b>Chapter II: Critical Point Theory.</b>	
1. Topological Link . . . . .	83
2. Morse Indices of Minimax Critical Points . . . . .	92
2.1. Link . . . . .	92
2.2. Genus and Cogenus . . . . .	96
3. Connections with Other Theories . . . . .	99
3.1. Degree theory . . . . .	99
3.2. Ljusternik-Schnirelman Theory . . . . .	105
3.3. Relative Category . . . . .	109
4. Invariant Functionals . . . . .	111
5. Some Abstract Critical Point Theorems . . . . .	121
6. Perturbation Theory . . . . .	131
6.1. Perturbation on Critical Manifolds . . . . .	131
6.2. Uhlenbeck's Perturbation Method . . . . .	136
<b>Chapter III: Applications to Semilinear Elliptic Boundary Value Problems.</b>	
1. Preliminaries . . . . .	140
2. Superlinear Problems . . . . .	144
3. Asymptotically Linear Problems . . . . .	153

3.1. Nonresonance and Resonance with the Landesman-Lazer Condition . . . . .	153
3.2. Strong Resonance . . . . .	156
3.3. A Bifurcation Problem . . . . .	161
3.4. Jumping Nonlinearities . . . . .	164
3.5. Other Examples . . . . .	169
4. Bounded Nonlinearities . . . . .	172
4.1. Functionals Bounded From Below . . . . .	172
4.2. Oscillating Nonlinearity . . . . .	173
4.3. Even Functionals . . . . .	176
4.4. Variational Inequalities . . . . .	177
<b>Chapter IV: Multiple Periodic Solutions of Hamiltonian Systems</b>	
1. Asymptotically Linear Systems . . . . .	182
2. Reductions and Periodic Nonlinearities . . . . .	188
2.1. Saddle Point Reduction . . . . .	188
2.2. A Multiple Solution Theorem . . . . .	195
2.3. Periodic Nonlinearity . . . . .	198
3. Singular Potentials . . . . .	203
4. The Multiple Pendulum Equation . . . . .	209
5. Some Results on Arnold Conjectures . . . . .	215
5.1. Conjectures . . . . .	215
5.2. The Fixed Point Conjecture on $(T^{2n}, \omega_0)$ . . . . .	218
5.3. Lagrange Intersections for $(\mathbb{C}P^n, \mathbb{R}P^n)$ . . . . .	220
<b>Chapter V: Applications to Harmonic Maps and Minimal Surfaces</b>	
1. Harmonic Maps and the Heat Flow . . . . .	229
2. The Morse Inequalities . . . . .	246
3. Morse Decomposition . . . . .	250
4. The Existence and Multiplicity for Harmonic Maps . . . . .	257
5. The Plateau Problem for Minimal Surfaces . . . . .	260
<b>Appendix: Witten's Proof of the Morse Inequalities</b>	
1. A Review of Hodge Theory . . . . .	274
2. The Witten Complex . . . . .	282
3. Weak Morse Inequalities . . . . .	287
4. Morse Inequalities . . . . .	295
References . . . . .	298
Index of Notation . . . . .	310
Index . . . . .	311
