List of Figures vii
Preface ix
Acknowledgments xiii

1. NONLINEAR OPERATORS AND FIXED POINTS 1
   1.1 Compact Operators 2
   1.2 Measures of Noncompactness and Set-Contractions 14
   1.3 Monotone Operators 31
   1.4 Accretive Operators and Nonlinear Semigroups 65
   1.5 Nemitsky Operators 84
   1.6 The Ekeland Variational Principle 92
   1.7 Fixed Points Theorems and Inequalities 99
   1.8 Remarks 130
   1.9 Exercises 138
   1.10 Solutions to Exercises 144

2. ORDINARY DIFFERENTIAL EQUATIONS 169
   2.1 Critical Point Theory 170
   2.2 Degree Theory 189
   2.3 Initial and Boundary Value Problems for ODEs 214
   2.4 Differential Inclusions 256
   2.5 Hamiltonian Systems 270
   2.6 Remarks 284
   2.7 Exercises 290
   2.8 Solutions to Exercises 294

3. PARTIAL DIFFERENTIAL EQUATIONS 313
3.1 Eigenvalue Problems and Maximum Principles 314
3.2 Semilinear and Nonlinear Elliptic Problems 345
3.3 Elliptic Variational Inequalities 374
3.4 Evolution Triples 391
3.5 Evolution Equations I - Parabolic Problems 404
3.6 Evolution Equations II - Hyperbolic Problems 433
3.7 Γ-Convergence of Functions 453
3.8 G-Convergence of Operators 473
3.9 Remarks 490
3.10 Exercises 496
3.11 Solutions to Exercises 506

4. OPTIMAL CONTROL AND CALCULUS OF VARIATIONS 541
4.1 Existence and Relaxation 543
4.2 Sensitivity Analysis 577
4.3 Maximum Principle 595
4.4 Hamilton-Jacobi-Belmann Equation and Viscosity Solutions 613
4.5 Controllability and Observability 631
4.6 Calculus of Variations and Applications 654
4.7 Remarks 683

5. MATHEMATICAL ECONOMICS 691
5.1 Equilibria in Exchange Economies 692
5.2 Multisector Optimal Growth Models: Discrete Time 706
5.3 Continuous Time Models 730
5.4 Growth Models Under Uncertainity 749
5.5 Stochastic Games 774
5.6 Remarks 791
