Chapter 1: Multis	1
§1 Upper Semicontinuity	3
1.1 Some Basic Notation	3
1.2 Upper Semicontinuity	4
1.3 Properties of Usc Multis	6
1.4 Other Tests for Usc	8
1.5 Remarks	8
Problems	9
§2 Lower Semicontinuity	12
2.1 Lower Semicontinuity	12
2.2 Continuous Selections	13
2.3 Continuity	15
2.4 Locally Lipschitz Approximations of Usc Multis	16
2.5 Remarks	17
Problems	18
§3 Measurability	21
3.1 Measurable Multis	21
3.2 Measurable Selections	22
3.3 Approximation by Step-Multis	23
3.4 Some Consequences	25
3.5 Multis of Two Variables	26
3.6 Remarks	27
Problems	28
§4 Mishmash	31
4.1 Tangency Conditions	31
4.2 Bochner Integrals	34
4.3 Monotone Multis	35
4.4 Accretive Multis	38
4.5 Some Basic Facts about Banach Spaces	42
4.6 Remarks	43
Problems	44
Chapter 2: Existence Theory in Finite Dimensions	49
§5 Upper Semicontinuous Right-Hand Sides	52
5.1 The Usc Case	53
5.2 Counter-Examples	54
5.3 The Carathéodory Case	56

5.4	Some Consequences	58
5.5	Remarks	60
	Problems	61
§6	Lower Semicontinuous Right-Hand Sides	65
6.1	The Lsc Case	66
6.2	The Carathéodory Case	68
6.3	Some Consequences	71
6.4	Remarks	74
	Problems	75
Chapter 3: Solution Sets		77
§7	Topological Properties of Solution Sets	79
7.1	Elementary Properties	79
7.2	Invariance	80
7.3	Connectedness in the Usc Case	81
7.4	Connectedness in the Lsc Case	84
7.5	Funnels	84
7.6	Remarks	85
	Problems	87
§8	Comparison of Solutions	91
8.1	Preliminaries	91
8.2	Extremal Solutions I	92
8.3	Extremal Solutions II	95
8.4	Related Problems	98
8.5	Gronwall's Lemma	100
8.6	Convexification	102
8.7	Remarks	105
	Problems	105
Chapter 4: Existence Theory in Infinite Dimensions		109
§9	Compactness Conditions	111
9.1	Two Examples	111
9.2	Measures of Noncompactness	113
9.3	The Usc Case	115
9.4	The Lsc Case	119
9.5	Remarks	124
	Problems	125
§10	Noncompactness Conditions	130
10.1	Baire Category	130
10.2	Extreme Points	131
10.3	Proof of Theorem 10.1	133
10.4	Lipschitz Conditions	135

10.5	Monotonicity	136
10.6	Hyperaccretivity	140
10.7	Remarks	141
	Problems	142
Chapter 5: Fixed Points and Qualitative Theory		143
§ 11	Fixed Points	146
11.1	Some (Geo-)metric Results	146
11.2	Weakly Inward Maps	149
11.3	Set-Contraactions	151
11.4	Degree Theory	154
11.5	An Example	156
11.6	Remarks	158
	Problems	160
§ 12	Boundary Value Problems	164
12.1	A Comparison Result	164
12.2	Sturm/Liouville Problems	167
12.3	Solutions in Closed Sets	173
12.4	Remarks	177
	Problems	178
§ 13	Periodic Solutions	181
13.1	Reduction to the Regular Case	181
13.2	Another Fixed Point Problem	182
13.3	Examples	186
13.4	Remarks	197
	Problems	197
§ 14	Stability and Asymptotic Behavior	202
14.1	Stability	202
14.2	Stability Tests	204
14.3	Asymptotic Behavior	208
14.4	Perturbations	213
14.5	Remarks	217
	Problems	222
Appendix: Related Topics		227
A 1.	Discontinuous Differential Equations	227
A 2.	Implicit Differential Equations	233
A 3.	Functional Differential Equations	235
A 4.	Perturbations of Dissipative Right-Hand Sides	237
	References	243
