

# CONTENTS

Preface .....	5
Remarks on enumeration of formulae .....	8
Remarks on the English edition .....	9
Preliminaries .....	11
1. Introduction .....	17
2. On elementary methods of integration .....	30
3. Systems of differential equations, vector notation .....	67
4. Linear differential equations .....	78
5. Autonomous linear differential equations .....	104
6. Periodic linear differential equations .....	134
7. Second order linear differential equations .....	145
8. Asymptotic behaviour of solutions of linear differential equations .....	163
9. Linear boundary value problems .....	167
10. Local existence of solutions of nonlinear differential equations. Kneser theorem. Fukuhara theorem .....	200
11. Uniqueness .....	208
12. Global properties of solutions of differential equations .....	215
13. Differentiability of the solution with respect to initial conditions .....	230
14. Dependence of the solution on a parameter .....	241
15. Exponential stability. Hyperbolic point, unstable and stable manifold .....	267
16. First integrals. Partial differential equations .....	279
17. Autonomous systems of two differential equations .....	292
18. Carathéodory theory of differential equations. Differential relations .....	315
Appendices .....	354
References .....	432
Index of symbols .....	437
Subject index .....	439
