

TABLE OF CONTENTS

Section	Page
1. Introduction	IX
2. Scalar Linear Ordinary Differential Equations	
2.1 The disconjugacy domain	1
2.2 The non-oscillation domain, N	8
2.3 The location of D and N	11
2.4 An open problem	15
2.5 Applications to the Sturm-Liouville equation and its extensions	20
2.6 Applications to equations of the form $y'' + (\lambda^2 p(x) + \lambda r(x) - q(x))y = 0$	32
2.7 On the equivalence of D and N	36
2.8 Disconjugacy and Stepanov almost-periodic potentials	40
2.9 Concluding remarks on §2	47
3. Linear Vector Ordinary Differential Equations	
3.1 Fundamental notions, definitions and terminology	49
3.2 Wintner-disconjugacy	51
A. The case of general matrix coefficients	52
B. The case of symmetric matrix coefficients	54
3.3 Strong and weak disconjugacy	60
3.4 Almost periodic vector systems	63

4. Scalar Volterra-Stieltjes integral equations	
4.1 Introduction	79
4.2 Fundamental notions	79
4.3 Disconjugate Volterra-Stieltjes integral equations	80
4.4 Closure and convexity of the disconjugacy domain	86
Bibliography	101
Index	107
Symbol list	108
Quick reference guide to theorems, etc.	109
