Contents

Preface ix

Chapter I **Ergodic Theory**

1. Abstract Dynamical Systems 1
2. Ergodic Theorems 7
3. Ergodicity and Mixing 14
4. Products and Factors 21
5. Inverse Limits 24
6. Induced Systems 28

Exercises 32

Chapter II **Topological Dynamics**

1. Classical Dynamical Systems 43
2. Minimal and Strictly Ergodic Systems 46
3. Equicontinuous and Distal Systems 51
4. Sums and Products of Dynamical Systems 53
5. Inverse Limits 57
6. The Ellis Semigroup of Σ 59
7. Expansive Systems 63

Exercises 66

Chapter III **Group Automorphisms and Affine Transformations**

1. Dynamical Systems on Groups 71
2. Ergodicity 76
3. Discrete and Quasidiscrete Spectrum 84
4. Quasiperiodic Spectrum and the Ergodic Part of τ 89
5. Ergodic Automorphisms 92
6. An Affine Transformation Associated with the Dynamical System Φ 96

Exercises 102

Chapter IV **Entropy**

1. Conditional Expectation and Kolmogorov Entropy 109
2. The Information Function and Finiteness of $h(\phi, \mathscr{A})$ 114
3. Sinaĭ's Theorem and Generators 119
4. Topological Entropy 127
5. Entropy of Affine Transformations 133
6. McMillan's Theorem and Entropy of Induced Systems 135

Exercises 142

Chapter V **Bernoulli Systems and Ornstein's Theorem**

1. Definitions 151
2. Approximation Lemmas 158
3. The Isomorphism Theorem 173
4. Extensions and Consequences of the Isomorphism Theorem 177

Exercises 179
