

# Contents

<b>Preface</b> . . . . .	ix
<b>1 Mathematical preliminaries</b> . . . . .	1
1.1 Vectors and matrices . . . . .	1
1.2 Bilinear and quadratic forms . . . . .	9
1.3 Canonical forms of matrices . . . . .	11
1.4 Symmetrizable matrices . . . . .	24
1.5 Extremum properties of eigenvalues . . . . .	26
1.6 Sylvester's law of inertia and its quantitative formulation . . . . .	33
<b>2 Fundamental concepts of stability</b> . . . . .	37
2.1 Introductory remarks . . . . .	37
2.2 Lyapunov's definition of stability . . . . .	39
2.3 Linear systems and stability criteria . . . . .	42
2.4 Classification of systems . . . . .	53
2.5 Multiple-parameter systems and associated definitions . . . . .	60
<b>3 Conservative systems</b> . . . . .	65
3.1 Stability of conservative systems . . . . .	65
3.2 Convexity of the fundamental characteristic surface . . . . .	68
3.3 Application of Rayleigh quotient . . . . .	73
3.4 Practical implications . . . . .	77
3.5 Effect of damping . . . . .	80
3.6 Example: A two-degree-of-freedom model . . . . .	84
3.7 Continuous systems . . . . .	86
<b>4 Pseudo-conservative systems</b> . . . . .	91
4.1 Introduction . . . . .	91
4.2 Properties of the system . . . . .	92
4.3 Convexity of the fundamental characteristic surface . . . . .	95

## Contents

4.4	Lower bound estimates . . . . .	97
4.5	Practical considerations . . . . .	102
4.6	Effect of damping . . . . .	104
4.7	Example: Pflüger's column . . . . .	106
<b>5</b>	<b>Gyroscopic systems . . . . .</b>	<b>113</b>
5.1	Gyroscopic conservative systems . . . . .	113
5.2	Characteristic curves . . . . .	117
5.3	Flutter instability . . . . .	122
5.4	Gyroscopic conservative systems with multiple-parameter systems . . . . .	124
5.5	Standard forms of eigenvalue problems . . . . .	126
5.6	Rotating systems . . . . .	131
5.7	Example 1: Rotating model . . . . .	137
5.8	Example 2: Rotating flexible shafts . . . . .	142
5.9	Example 3: Fluid-conveying pipes . . . . .	152
5.10	Dissipative gyroscopic systems . . . . .	153
5.11	Effect of dissipation on the stability boundaries of rotating systems . . . . .	161
5.12	Example 4: Dissipative rotating flexible shafts . . . . .	165
<b>6</b>	<b>Circulatory systems . . . . .</b>	<b>171</b>
6.1	Properties of circulatory systems . . . . .	171
6.2	Flutter instability and the extremum properties of the generalized Rayleigh quotient . . . . .	177
6.3	Convexity of the flutter and divergence boundaries . . . . .	182
6.4	Examples and discussion . . . . .	189
6.5	A direct method of stability analysis of continuous system . . . . .	193
6.6	Effect of velocity-dependent forces . . . . .	203
<b>References</b>	. . . . .	<b>207</b>
<b>Index</b>	. . . . .	<b>213</b>
