

Introduction and statement of the problem 1Chapter I - Some properties of first order recurrences

1.0	Introduction	23
1.1	Elementary properties of first order recurrences	29
1.2	Singularity structure of a quadratic recurrence	38
1.3	Relation to functional equations	46
1.4	Topological entropy and some statistical properties	57

Chapter II - Some properties of second order recurrences

2.0	Introduction	61
2.1	Elementary properties of linear recurrences	65
2.2	The effect of non linear perturbations	76
2.3	Influence domain of a stable point singularity	81
2.4	Approximate determination of an isolated closed invariant curve	91
2.5	Some relationships between recurrences, continuous iterates and differential equations	96

Chapter III - Stochasticity in conservative recurrences

3.0	Introduction	104
3.1	Quadratic recurrence	106
	3.1.1. General properties	106
	3.1.2. Ordering of cycles	111
	3.1.3. Properties of invariant curves	116
	3.1.4. Critical and exceptional cases	122
	3.1.5. Bifurcations	129
3.2	Cubic recurrence	137
3.3	Bounded quadratic recurrence	148
3.4	Exponential recurrence	159
3.5	Sinusoidal recurrence	169
3.6	Unsymmetric sinusoidal recurrence	173
3.7	Box-within-a-box structure in the phase plane	177
3.8	The method of sections	179
3.9	Non-vanishing Jacobian and uniqueness of antecedents	181
3.10	The variational entropy	182

Chapter IV - Stochasticity in almost conservative recurrences

4.0	Introduction	184
4.1	Quadratic recurrence	187
4.2	Effect of non-unique antecedents	201

Chapter V - Stochasticity in strongly non-conservative recurrences

5.0	Introduction	212
5.1	Effect of strong damping on an initially conservative recurrence	212
5.2	An elementary composite attractor	216
5.3	Chaos in a predator-prey recurrence	223
5.4	Chaos in a non-conservative recurrence with unique antecedents	229

Chapter VI - Conclusion and some open problems 234
