

# CONTENTS

Preface . . . . .	v
<b>CHAPTER 1. <i>Properties of Linear Systems</i></b> . . . . .	<b>1</b>
1. Introduction . . . . .	1
2. Vector-Matrix Notation . . . . .	2
3. Existence of Solutions of the Vector-Matrix Equation $dy/dt = A(t)y$ . . . . .	6
4. The Matrix Equation, $dy/dt = A(t)Y$ . . . . .	9
5. The Linear Inhomogeneous Equation $dy/dt = A(t)y + w$ . . . . .	11
6. The Equation with Constant Coefficients . . . . .	12
7. The Behavior of the Solutions of $dy/dt = Ay$ as $t \rightarrow \infty$ . . . . .	14
8. An Alternative Approach . . . . .	17
9. The Jordan Canonical Form for Matrices with Multiple Characteristic Roots . . . . .	19
10. Another General Diagonalization Theorem . . . . .	21
11. Corollary of the Above . . . . .	23
12. Application of the Previous Result . . . . .	24
13. An Approximation Theorem . . . . .	25
14. The Diagonalization of Variable Matrices . . . . .	25
15. Linear Systems with Periodic Coefficients . . . . .	28
 <b>CHAPTER 2. <i>Stability, Boundedness, and Asymptotic Behavior of Solutions of Linear Systems</i></b> . . . . .	 <b>32</b>
1. Introduction . . . . .	32
2. Almost-constant Coefficients . . . . .	34
3. Almost-constant Coefficients (Continued) . . . . .	37
4. Equations with Periodic Coefficients . . . . .	41
5. Equations with General Variable Coefficients . . . . .	42
6. Almost-constant Coefficients: Asymptotic Behavior . . . . .	44
7. Asymptotic Results . . . . .	50
8. Asymptotic Series . . . . .	55
9. The Asymptotic Behavior of the Solution of $dy/dt = A(t)y$ . . . . .	60
 <b>CHAPTER 3. <i>The Existence and Uniqueness of Solutions of Nonlinear Systems</i></b> . . . . .	 <b>65</b>
1. Introduction . . . . .	65
2. Method of Successive Approximations . . . . .	66
3. Uniqueness . . . . .	67
4. An Example Illustrating Lack of Uniqueness . . . . .	69
5. Method of Finite Differences . . . . .	69

CHAPTER 4. <i>The Stability of Solutions of Nonlinear Differential Equations</i> . . . . .	75
1. Introduction . . . . .	75
2. Stability . . . . .	76
3. A Preliminary Result . . . . .	77
4. Fundamental Stability Theorem, First Proof . . . . .	78
5. Fundamental Stability Theorem, Second Proof . . . . .	80
6. Fundamental Stability Theorem, Third Proof . . . . .	82
7. Asymptotic Behavior of the Solutions . . . . .	85
8. Periodic Coefficients . . . . .	85
9. Counterexample to a Proposed General Stability Theorem . . . . .	87
10. Instability . . . . .	88
11. Conditional Stability . . . . .	89
12. A Particular Case of Zero Characteristic Roots . . . . .	91
13. Difference Equations . . . . .	92
CHAPTER 5. <i>The Asymptotic Behavior of the Solutions of Some Nonlinear Equations of the First Order</i> . . . . .	94
1. Introduction . . . . .	94
2. Upper Bounds for the Solutions of $P(t, u, u') = 0$ . . . . .	94
3. Counterexample . . . . .	97
4. The Solutions of $u' = P(u, t)/Q(u, t)$ . . . . .	99
5. Asymptotic Behavior of Solutions of $u' = P(u, t)/Q(u, t)$ . . . . .	101
6. A Sharpening of Theorem 1 . . . . .	103
7. Some Results Concerning $u'' = R(u, t)/Q(u, t)$ . . . . .	105
CHAPTER 6. <i>The Second-order Linear Differential Equation</i> . . . . .	107
1. Introduction . . . . .	107
2. Some Lemmas . . . . .	107
3. Some Useful Transformations . . . . .	108
4. Boundedness Theorems . . . . .	111
5. A Counterexample . . . . .	113
6. $u'' + a(t)u = 0$ , $a(t) \rightarrow \infty$ . . . . .	113
7. $u'' + a(t)u = 0$ , $a(t) \rightarrow 0$ . . . . .	114
8. $L^2$ Boundedness . . . . .	115
9. Relations between $\ u\ $ , $\ u'\ $ and $\ u''\ $ . . . . .	117
10. Oscillatory Equations . . . . .	119
11. $u'' + \phi(t)u = 0$ , $\phi(t)$ Periodic of Period $\pi$ . . . . .	123
12. The Asymptotic Behavior of the Solutions of the Equation $u'' - (1 + \phi(t))u = 0$ . Résumé of Results . . . . .	125
13. The Equation $u'' - (1 + \phi(t))u = 0$ , where $\phi(t) \rightarrow 0$ as $t \rightarrow \infty$ . . . . .	127
14. The Liouville Transformation . . . . .	129
15. The Equation $u'' - (1 + \phi(t))u = 0$ , $\int_0^\infty  \phi'(t)  dt = \infty$ , $\int_0^\infty \phi^2(t) dt < \infty$ . . . . .	130
16. The Equation $u'' - (1 + \phi(t))u = 0$ , $\int_0^\infty  \phi(t) ^n dt < \infty$ . . . . .	133
17. Extension to Higher-order Equations . . . . .	134
18. The Equation $u'' + (1 + \phi(t))u = 0$ . Résumé of Results . . . . .	134
19. The Equation $u'' + (1 + \phi(t))u = 0$ (Continuation) . . . . .	136
20. The Equations $\epsilon(t)u'' + u' + u = 0$ and $u'' + a(t)u' + u = 0$ . . . . .	137

CHAPTER 7. <i>The Emden-Fowler Equation</i> . . . . .	143
1. Introduction . . . . .	143
2. Some Preliminary Reductions . . . . .	143
3. $u'' - t^\sigma u^n = 0$ , $\sigma + n + 1 < 0$ , Positive Proper Solutions . . . . .	145
4. $u'' - t^\sigma u^n = 0$ , $\sigma + 2 < 0 < \sigma + n + 1$ . . . . .	148
5. $\sigma + 2 < 0$ , $\sigma + n + 1 = 0$ , $u'' - t^\sigma u^n = 0$ . . . . .	149
6. $\sigma + 2 = 0$ , $u'' - t^\sigma u^n = 0$ . . . . .	150
7. $\sigma + 2 > 0$ , $u'' - t^\sigma u^n = 0$ . . . . .	151
8. $u'' + t^\sigma u^n = 0$ , $\sigma + n + 1 < 0$ , $n$ "Odd" . . . . .	152
9. $u'' + t^\sigma u^n = 0$ , $\sigma + 2 \geq 0$ , $n$ "Odd" . . . . .	153
10. $u'' + t^\sigma u^n = 0$ , $\sigma + 2 < 0 < \sigma + n + 1$ , $2\sigma + n + 3 < 0$ . . . . .	155
11. $u'' + t^\sigma u^n = 0$ , $2\sigma + n + 3 > 0$ , $\sigma + 2 < 0 < \sigma + n + 1$ . . . . .	156
12. $u'' + t^\sigma u^n = 0$ , $\sigma + 2 > 0$ . . . . .	160
13. Asymptotic Behavior of the Oscillatory Solutions of $u'' + t^\sigma u^n = 0$ . . . . .	161
14. The Equations $u'' \pm e^{\lambda t} u^n = 0$ . . . . .	163
Index . . . . .	165
