

CONTENTS

Preface	
0.	INTRODUCTION 1
0.1	A Typical Problem 1
0.2	Inverse Laplace Transforms by the Method of Residues 4
0.3	The Solution Procedure as a Computer Program 5
0.4	Systems with Multiple Inputs 6
1.	MUL module 8
	Example M1-1 9
2.	DETERM module 10
	Example M2-1 11
3.	CRAMER module 12
	Example M3-1 13
	Example M3-2 23
4.	BODE module 31
	Example M4-1 35
	Example M4-2 36
	Example M4-3 39
5.	LOCUS module 43
5.1	Effect of Feedback on System Dynamics 43
5.2	Input and Output Values 44
5.3	Plots 45
5.4	Effect on Time Response of Varying Root Locations 45

5.5	Precision Improvement	46
5.6	Tracking Error Response	47
5.7	Improved Computational Algorithm for Tracking Error	47
5.8	Analytical Solution for a Simple Case	48
5.9	Why Plots May Differ from What is Expected	50
5.10	Design Objectives	50
	Example M5-1	52
	Example M5-2	56
	Example M5-3	58
	Example M5-4	72
	Example M5-5	78
	Example M5-6	84
6.	RESPON module	101
	Table I	102
6.1	Comment	103
	Table II	105
6.2	Significance of Error Messages. What to Do About Them	106
6.3	Extension to Arbitrary Forcing Functions	108
	Example M6-1A	111
	Example M6-1B	114
	Example M6-1C	116
	Example M6-1D	118
	Example M6-1E	124
	Example M6-1F	131
	Example M6-2A	190
	Example M6-2B	192
	Example M6-2C	194
	Example M6-3	197
	Example M6-4	203
7.	SOLVE module	205
7.1	Comment	206
	Example M7-1	209
	Example M7-2	228

	Example M7-3	242
	Example M7-4	250
8.	SOURCE LISTINGS	282
	SOLVE	284
	GENPT	353
	GENPT(NCSU Version)	368
	CKROOT	372
	RESPON (Standard Precision Version).	374
9.	Some More Advanced Problems	392
