Foreword by Editor	5
Author's Preface	7
1. General Review of the Problems Arising from Concept of the Strange Attractor	10
1.1. Introduction	10
1.2. The Dynamical System and its Mathematical Model	10
1.3. Kinematical Interpretation of the Set of the Differential Equations	12
1.4. Classification of the Dynamical Systems	14
1.5. Oscillatory Systems and their Properties	16
1.6. Phase Portraits of the Nonautooscillatory Systems	19
1.7. Autooscillatory Systems	28
1.8. Simple and Strange Attractors of the Dynamical Systems	30
1.9. Signs of Stochastic Oscillations which can be Visualized Experimentally	34
1.10. How the Chance Appears in the Deterministic Systems	38
1.11. The Problem of Statistical Description of the Dynamical Systems. Ergodic Theory	41
1.12. Analysis of the Dynamical Chaos in Presence of Fluctuations	47
2. Elements of the Theory of Stability and Bifurcations in the Dynamical Systems	52
2.1. Introduction	52
2.2. Stability in the Linear Approximation. Equations in Variations	54
2.3. Lyapunov Characteristic Exponents for a Linear System	56
2.4. Analysis of Stability of the Equilibrium States	60
2.5. Stability of Periodic Solutions. Floquet Theory	60
2.6. LCE Spectrum of the Strange Attractor	63
2.7. Poincaré Map. Systems with Discrete Time (Cascades)	65
2.8. Bifurcations of Stationary and Periodic Motions	69
2.9. Geometrical Structure and Dimension of the Strange Attractors	83
2.10. Bifurcations of the Attractors	92

3.	Mechanisms of Evolution and Criteria of the Dynamical Chaos	96
3.1.	Introduction	96
3.2.	Route to Chaos through Period-doubling Bifurcation Cascade. Feigenbaum Regularity	98
3.3.	Transition via Intermittency	107
3.4.	Homoclinic Trajectories as a Criterium for the Complexity of Dynamics. Shilnikov's Theorem	111
3.5.	Routes to Chaos via Bifurcations of Quasiperiodic Oscillations	116
4.	Numerical Methods for the Study of the Nonlinear System's Dynamics	128
4.1.	Introduction	128
4.2.	Computation of Poincaré Maps	130
4.3.	Numerical Analysis of Periodic Solutions and of their Bifurcations	138
4.4.	Numerical Analysis of the Statistical Properties of the Attractors	147
4.5.	Algorithms of LCE-Spectrum Calculation	153
4.6.	Numerical Construction of One-dimensional Separatrices and Separatrix Contours	158
5.	References	165
