## Table of Contents

---

<b>Preface</b>	<b>ix</b>
<b>Chapter 1</b>	
<b>Integrable Nonlinear Systems and their Perturbation</b>	<b>1</b>
1.1 The Simplest Nonlinear Systems	2
1.2 Integration by Quadrature and Its Alternatives	17
1.3 Classical Mechanical Integrable Systems	38
1.4 New Ideas on Complete Integrability for Equilibrium Processes	40
1.5 Canonical Changes of Coordinates for the Mapping A	62
1.6 Bifurcation and the Integration of Nonlinear Ordinary and Partial Differential Equations	66
1.7 Qualitative Properties of Integrable Systems - Periodic and Quasiperiodic Motions of Dynamical Systems	74
1.8 Almost Periodic Motions of Dynamical Systems	113
Appendix 1 Nonlinear Fredholm Operators	118
Appendix 2 Bifurcation from Equilibria for Certain Infinite-Dimensional Dynamical Systems	122
Appendix 3 Elementary Facts about the Linear Dirichlet Problem	127
Appendix 4 On Besicovitch Almost Periodic Functions	137
<b>Chapter 2</b>	
<b>General Principles for Nonlinear Systems</b>	<b>144</b>
2.1 Differentiable Nonlinear Operators	145
2.2 Iteration of Nonlinear Operators	160
2.3 Nonlinear Fredholm Alternatives	172
2.4 The Idea of Nonlinear Desingularization	176
2.5 Variational Principles - New Ideas in the Calculus of Variations in the Large	192
2.6 Bifurcation	203
2.7 Bifurcation Into Folds	213

<b>Chapter 3</b>	
<b>Some Connections between Global Differential Geometry and Nonlinear Analysis</b>	<b>228</b>
3.1 Geodesics	231
3.2 Gauss Curvature and Its Extensions	242
3.3 Manifolds of Constant Gauss Positive Curvature	252
3.4 Mean Curvature	257
3.5 Simple Riemannian Metrics	261
3.6 Einstein Metrics	274
<b>Chapter 4</b>	
<b>Vortices in Ideal Fluids</b>	<b>294</b>
4.1 The Early History of Vortices in Fluids	294
4.2 Formulation of the Vortex Concept in Ideal Incompressible Fluids	297
4.3 Axisymmetric Vortex Motions with and without Swirl	304
4.4 Variational Principles for the Stream Function for Vortex Rings without Swirl	312
4.5 Leapfrogging of Vortices	317
4.6 Vortex Breakdown	326
4.7 Nonlinear Desingularization and Vortex Filaments	342
<b>Chapter 5</b>	
<b>Mathematical Aspects of Superconductivity</b>	<b>348</b>
5.1 The Simplest Nonlinear Yang-Mills Theory that Works	348
5.2 Physical Viewpoint	356
5.3 The Linear Approach to Superconductivity and Nonlinear Desingularization	359
5.4 Function Spaces for Symmetric Vortices	371
5.5 The Existence of Critical Points for $I_\lambda$ Associated with Symmetric Vortices	376
<b>Bibliography</b>	<b>382</b>
<b>Problems</b>	<b>385</b>
<b>Index</b>	<b>415</b>
