

CONTENTS

Preface	xi
Chapter One	
Introduction: Stability, Complexity, Reliability	1
1.1 Competition	2
1.2 Structure	5
1.3 Stability	9
1.4 Comparison Principle	15
1.5 Connective Stability	17
1.6 Cooperation	20
1.7 Decomposition	24
1.8 Aggregation	32
1.9 Decentralization	42
1.10 Synthesis	49
References	58
Chapter Two	
Analysis: Connective Stability	63
2.1 Structural Perturbations	65
2.2 Connective Stability	68
2.3 Differential Inequalities	74
2.4 Vector Liapunov Functions	81
2.5 Large-Scale Dynamic Systems	88
2.6 Partial Connective Stability	113
2.7 Connective Instability	126
2.8 Regions of Connective Stability	132
References	138

Chapter Three

Synthesis: Decentralized Control	145
3.1 Reachability, Vulnerability, and Condensations	147
3.2 Decentralization	165
3.3 Stabilization	171
3.4 Estimation	192
3.5 Optimization	199
References	214

Chapter Four

Economics: Competitive Equilibrium	219
4.1 Commodities and Prices: Demand Functions	222
4.2 A Dynamic Model	225
4.3 Connective Stability: Linear Case	228
4.4 Connective Stability: Nonlinear Case	234
4.5 Nonstationary Models: Moving Equilibrium	241
4.6 A Stochastic Model	250
4.7 Discrete Models	254
4.8 Composite Commodities: A Hierarchic Model	260
References	263

Chapter Five

Ecology: Multispecies Communities	269
5.1 Linear Constant Models	271
5.2 Nonlinear Models: Linearization	276
5.3 Nonlinear Matrix Models	279
5.4 Stability Regions	285
5.5 Lotka-Volterra Model	287
5.6 Instability	294
5.7 Environmental Fluctuations	297
5.8 Stochastic Models: Stability	302
5.9 Stochastic Models: Instability	312
5.10 Hierarchic Models	315
References	322

Chapter Six

Engineering: Spacecraft Control Systems	327
6.1 Large Space Telescope: A Model	328
6.2 Bilinear Systems: Local Stabilization	335

Contents

6.3	Stabilization of LST	338
6.4	Optimal Control of LST	340
6.5	Maximization of Structural Parameters	343
6.6	Stabilization of the Skylab	352
	References	361

Chapter Seven

Engineering: Power Systems	363	
7.1	Transient Stability	364
7.2	A Model and Decomposition	366
7.3	Subsystem Analysis	369
7.4	Stability Region	374
7.5	Three-Machine System	378
7.6	Automatic Generation Control	379
7.7	A Decentralized Model	381
7.8	Regulator Design	384
	References	390
Appendix: Matrices	394	
	References	406
Index	409
