

CONTENTS

Preface		v
Chapter 1	Mathematical Preliminaries	
1.1	Metric Spaces	1
1.2	Normed Metric Spaces	7
1.3	Contraction Mappings	13
1.4	Linear Operators	16
1.5	Linear Transformations and Matrices	19
1.6	Inner Product Spaces and Fourier Series	26
1.7	Notes	33
	References	34
Chapter 2	Almost Periodic Functions	
2.1	Introduction	35
2.2	Definitions and Elementary Properties of Almost Periodic Functions	38
2.3	Mean Values of Almost Periodic Functions and their Fourier Series	43
2.4	Almost Periodic Functions Depending Uniformly on a Parameter	58
2.5	Bochner's Criterion	62
2.6	Limiting Cases of Almost Periodic Functions	64
2.7	Notes	66
	References	69
Chapter 3	Properties of Ordinary Differential Equations	
3.1	Introduction	70
3.2	Existence and Uniqueness of Solution	71
3.3	Linear Ordinary Differential Equations	79
3.4	Constant Coefficient Differential Equations	85
3.5	Periodic Coefficients and Floquet Theory	90
3.6	Notes	92
	References	93

Chapter 4	Kinematic Similarity	
4.1	Introduction	95
4.2	Liapunov Transformations and Kinematic Similarity	96
4.3	Invariants and Canonical Forms	98
4.4	Necessary and Sufficient Conditions for Kinematic Similarity	101
4.5	Estimates for Characteristic Exponents	104
	References	124
Chapter 5	Stability Theory for Nonstationary Systems	
5.1	Local Equilibrium Stability Conditions	125
5.2	Asymptotic Stability	129
5.3	Matrix Projections and Dichotomies of Linear Systems	135
5.4	Asymptotic Characteristic Value Stability Theory	142
5.5	Stability in the Large	153
5.6	Total Stability and Stability under Disturbances	155
5.7	Sufficient Conditions for Stability	158
5.8	Notes and Input-Output Stability	160
	References	163
Chapter 6	Asymptotic Floquet Theory	
6.1	Introduction	164
6.2	The Coppel-Bohr Lemma and Linear Differential Equations with Almost Periodic Coefficients	167
6.3	Coppel's Theorem	176
6.4	Almost Periodic Matrices Containing a Parameter	180
	References	193
Chapter 7	Linear Systems with Variable Coefficients	
7.1	Introduction and Survey of Applications	194
7.2	Beam Stabilisation in an Alternating Gradient Proton Synchrotron	199
	References	206
Appendix 1	Existence of Solutions to Periodic and Almost Periodic Differential Systems	207
Appendix 2	Dichotomies and Kinematic Similarity	214
Appendix 3	Bibliography	220
Subject Index		233
