Editor's Preface	ix
Introduction	xi
R. L. DOBRUSHIN AND M. ZAHRADNÍK / Phase Diagrams for Continuous-Spin Models: An Extension of the Pirogov–Sinai Theory	1
Introduction	1
1. Formulation of the Main Result	4
1.1. Configurations	4
1.2. States	4
1.3. Hamiltonians	5
1.4. Gibbs States	5
1.5. Assumptions of the Main Theorem	6
1.6. The Main Theorem	10
1.7. Strategy of the Proof	11
2. Preliminaries	11
2.1. Abstract Polymer Models and Cluster Expansions	11
2.2. Gaussian Gibbsian Fields: The Correlation Decay	17
2.3. Estimates of Semi-Invariants: Cluster Expansions of Perturbed Gaussian Fields	30
3. The Main Lemma	62
3.1. The Geometry of Configurations	62
3.2. Reduction to the Main Lemma	64
4. Proof of the Main Lemma	76
4.1. Contours	76
4.2. Reduction to a Contour Model	79
4.3. Estimates of the Main Term $G_\lambda(\Gamma)$. Decomposition of the Contour Energy	88
4.4. Boundary Terms of Partition Functions of Contour Models	95
4.5. Conclusion of the Proof of the Main Lemma	106
References	122
N. I. CHERNOV / Space-Time Entropy of Infinite Classical Systems	125
1. Introduction	125
2. Statistical Estimates of the Gibbs Distribution	126
3. Reduction to Partial Flows	129
4. Estimate of Space-Time Entropy	132
References	136

R. A. MINLOS AND A. I. MOGILNER / Spectrum Analysis and Scattering Theory for a Three-Particle Cluster Operator	139
1. Introduction. A General Definition of the Cluster Operator	139
2. Three-Particle Cluster Operators	140
3. Equations for the Resolvent of a Self-Adjoint Three-Particle Cluster Operator	143
4. Study of Equations (3.4)–(3.6)	146
5. The Main Result	155
6. Proof of Theorem 5.11 (Scattering Theory)	157
References	160
M. L. BLANK / Stochastic Attractors and their Small Perturbations	161
1. Introduction	161
2. Dynamical Systems with Stochastic Attractors	164
3. Stochastic Perturbations (Regular Case)	170
4. The Law of Exponential Decay and Small Stochastic Perturbations	176
5. Stochastic Perturbations (Singular Case)	179
6. Small Quasi-Stochastic Perturbations	180
7. Ergodic Properties of Dynamical System Discretizations	184
References	196
N. N. ČENCOVA / Statistical Properties of Smooth Smale Horseshoes	199
Introduction	199
1. General Background	203
1.1. Structures in the Product $Z = X \times Y$	203
1.2. Uniformly Hyperbolic Transformations of $Z = X \times Y$	204
1.3. A Sufficient Condition for Uniform Hyperbolicity in $Z = X \times Y$	206
1.4. Leaves and Rectangles	207
1.5. The Smale Horseshoe	209
2. Expanding and Contracting Fibrations of a Smale Horseshoe	211
2.1. The Smoothness of Expanding and Contracting Fibres	211
2.2. Expanding and Contracting Fibrations are Hölderian	213
2.3. The Local Smoothness of Expanding and Contracting Fibrations	213
2.4. The Hölder Property of the Canonical Isomorphism Defined by a Fibration	215
3. Smooth Invariant Conditional Probability Distributions on Fibrations	216
3.1. The Evolution of Densities of Conditional Probability Distributions on Fibres Induced by \mathcal{F}	216
3.2. The Existence of a T -Invariant Smooth Family of Probability Distributions on Fibres at $\mathcal{D}(\infty)$	217
3.3. Comparison of Densities of Conditional Probability Distributions on Different Fibres	218
3.4. The Dependence of T -Invariant Conditional Densities on the Number of the Fibre	219
4. Smooth Non-Singular Probability Distributions on a Smale Horseshoe	220

4.1. Defining Measures on Measurable Rectangles in Terms of Conditional Probability Distributions on Fibres	220
4.2. An Average Description of the Evolution of Measures from the Class \mathfrak{S}	222
4.3. The Construction of an Eigenmeasure for a Smale Horseshoe	224
5. A Natural Invariant Probability Distribution on the Hyperbolic Set of a Smale Horseshoe	226
5.1. The Sequence of Probability Distributions $\hat{\mu}_{(m)}$	226
5.2. The Computation of the Asymptotics of $\hat{\mu}_{(m)}$ via the Matrix Technique	228
5.3. The Weak Limit $\mu_0\{\cdot\}$ of the Sequence of Measures $\mu_{(m)}\{\cdot\}$	233
6. Some Properties of the Constructed Limit Probability Distributions on a Smale Horseshoe	235
6.1. The T -Invariant Conditional Probability Distributions $P\{\cdot I\}$ on Expanding Fibres of the Hyperbolic Set Ω	235
6.2. Weak Bernoulli Partition for the T -Invariant Measure μ_0	236
6.3. The Eigenfunction $e(I)$ of a Smale Horseshoe	239
7. Evolution of Probability Distributions on a Smale Horseshoe	240
7.1. Asymptotic Inequalities for Measures and Integrals	240
7.2. The Asymptotics of Integrals	244
7.3. Mappings Which Possess a Smale Horseshoe	250
 Appendix: Ergodic Properties of Positive Matrices with Bounded Ratio of Rows	 253
