

Contents

- 1 THE BASIC CONCEPTS OF DYNAMICAL SYSTEM THEORY 1**
 - 1.1 Dynamical Systems in Euclidean Space 1
 - 1.2 Nonautonomous Systems 16
 - 1.3 Parameters in Dynamical Systems: “Forcing Functions” 18

- 2 DYNAMICAL SYSTEMS IN PHYSICS AND BIOLOGY 23**
 - 2.1 Classical Newtonian Systems 23
 - 2.2 Conservative Systems 36
 - 2.3 Volterra Systems 41
 - 2.4 Chemical and Biochemical Kinetic Systems 45
 - 2.5 Analogous Systems and Analogies 52

- 3 STABILITY IN DYNAMICAL SYSTEMS 59**
 - 3.1 Stability: Basic Concepts 59
 - 3.2 The Stability of Critical Points 66
 - 3.3 Criteria for the Stability of Critical Points of Autonomous Systems: Lyapunov Functions 70
 - 3.4 Asymptotic Stability of Critical Points: Some Heuristic Considerations 79
 - 3.5 Stability under Change of Variables 81
 - 3.6 Structural Stability 83

- 4 INTRODUCTION TO LINEAR DYNAMICAL SYSTEMS 88**
 - 4.1 Linearization around Critical Points 88
 - 4.2 Review of Linear Algebra 91

4.3	General Solution of the n -Dimensional Linear Homogeneous Dynamical System	100
4.4	Two-Dimensional Linear Homogeneous Systems	104
4.5	Homogeneous Linear Systems with Zero Eigenvalues; Closed Systems	111
5	QUALITATIVE THEORY OF NONLINEAR DYNAMICAL SYSTEMS: POINCARÉ-BENDIXON THEORY	117
5.1	The Linearization Theorem	117
5.2	Applications of the Linearization Theorem	125
5.3	Van der Pol's Equation and Limit Cycles	131
5.4	Closed Trajectories; the Index of a Closed Curve	139
5.5	The Poincaré-Bendixon Theorem	146
5.6	Activation and Inhibition in Dynamical Systems	151
6	INTRODUCTION TO NONAUTONOMOUS SYSTEMS	161
6.1	Nonautonomous Linear Homogeneous Dynamical Systems	161
6.2	Nonautonomous Linear Nonhomogeneous Dynamical Systems	168
6.3	Some Special Cases	173
7	DYNAMICAL ASPECTS OF MORPHOGENESIS	180
7.1	Introduction	180
7.2	Morphogenesis: The Rashevsky-Turing Theory	180
7.3	Open Systems as Morphogenetic Metaphors	190
7.4	Multiple Steady States in Open Systems	195
7.5	Some Historical Considerations on Cellular Biochemistry	202
7.6	Inhibition, Induction, and Repression in Catalyzed Open Systems	208
7.7	Some Specific Realizations of Cellular Dynamical Metaphors	211
8	DYNAMICAL ASPECTS OF EXCITATION	224
8.1	Introduction	224
8.2	Abstract Two-Factor Elements	224
8.3	Realizations of Two-Factor Elements	232
8.4	Networks of Two-Factor Elements and Their Realizations	237
8.5	General Two-Factor Reaction-Diffusion Schemes	247
8.6	Other Dynamical Metaphors for Nerve Excitation	251

9	THE FORMALISM OF STATISTICAL MECHANICS	265
9.1	Introduction	265
9.2	Flows on Phase Space	266
9.3	Liouville's Theorem	268
9.4	Another Formulation of Liouville's Theorem	272
9.5	Time and Phase Averages of Observables along Trajectories; Ergodicity and the Ergodic Hypothesis	276
9.6	Quasi-Ergodicity in Conservative Systems	280
9.7	Some Applications of the Statistical Mechanical Formalism to Biological Dynamics	284
INDEX	297
