PREFACE . . . . .	vii
<b>1. Geometric Concepts: Vectors and Matrices</b>	
§ 1. Spaces, Distances, Vectors . . . . .	3
§ 2. Matrices and Determinants . . . . .	6
§ 3. Relation Between Vectors and Matrices; Quadratic Forms . . . . .	11
§ 4. A Little Geometry . . . . .	17
<b>2. Differential Equations</b>	
§ 5. Generalities . . . . .	21
§ 6. General Considerations on Stability . . . . .	28
§ 7. Stability in Autonomous Systems . . . . .	30
§ 8. A Special Type of Function . . . . .	33
§ 9. Liapunov's Stability Theorems . . . . .	37
§ 10. Stability and the Theorems of Liapunov for Nonautonomous Systems . . . . .	40
§ 11. Converse of the Theorems of Liapunov . . . . .	41
§ 12. Some Examples . . . . .	42
§ 13. The Extent of Asymptotic Stability . . . . .	56
§ 14. Stability under Persistent Disturbances . . . . .	71
<b>3. Application of Liapunov's Theory to Controls</b>	
§ 15. General Remarks on Controls . . . . .	75
§ 16. Construction of a Special Liapunov Function . . . . .	79
§ 17. The Relation Between the Matrices $B, C$ . . . . .	81
§ 18. Return to the Control Problem . . . . .	85
§ 19. Control with Some Characteristic Roots Zero . . . . .	87
§ 20. Control Computation . . . . .	91
§ 21. Application to an Actual Case . . . . .	98
§ 22. General Controls . . . . .	103
<b>4. Extensions of Liapunov's Method</b>	
§ 23. Finite Escape Times; Lagrange Stability . . . . .	107
§ 24. Ultimate Boundedness . . . . .	116
§ 25. Practical Stability . . . . .	121
§ 26. Forced Oscillations; Steady-State Oscillations . . . . .	126
Literature . . . . .	131
Index . . . . .	133
