| <b>1 Introduction</b>   | <b>1</b>  |
| 1.1 Preliminary remarks   | 1         |
| 1.2 Brief historical review   | 2         |
| 1.3 Examples  | 3         |
| 1.3.1 Altitude control system   | 4         |
| 1.3.2 Attitude control system   | 10        |
| 1.3.3 Discussion  | 14        |
| 1.4 Outline of chapter contents   | 14        |
| <b>2 Formulation of the control problem and conditions for optimality</b>   | <b>16</b> |
| 2.1 Formulation of the optimal control problem  | 16        |
| 2.2 Bellman–Hamilton–Jacobi equation  | 19        |
| 2.3 Time-optimal control of norm-invariant systems  | 22        |
| 2.4 The maximum principle   | 25        |
| 2.5 Linear autonomous time-optimal control systems  | 31        |
| 2.6 Linear autonomous time-optimal regulating systems   | 41        |
| 2.7 Discussion  | 54        |
| <b>3 Structure and properties of optimal saturating control systems</b>   | <b>55</b> |
| 3.1 Discontinuous feedback control: switching surfaces  | 55        |
| 3.2 Filippov solutions: regular switching and sliding motion  | 55        |
| 3.3 Linear single-input systems: conditions for regular switching and sliding motion under discontinuous feedback control | 61        |
| 3.4 General and special invariance of multiple integrator systems   | 63        |
| 3.4.1 General invariance of optimal multiple integrator systems   | 64        |
| 3.4.2 General invariance of the feedback system   | 66        |
| 3.4.3 Special invariance of the optimal system  | 67        |
| 3.5 $(\Theta, \Phi)$ -space: a reduced state space for invariant triple integrator systems                                | 67        |
| 3.5.1 $z$ -space  | 68        |
| 3.5.2 $(\Theta, \Phi)$ -space   | 69        |
| 3.5.3 p-paths and n-paths in $(\Theta, \Phi)$ -space  | 71        |
| 3.5.4 Time-optimal state portrait for the triple integrator system  | 72        |

|          |  |            |
|----------|--|------------|
| 3.6      | System equivalence: systems reducible to equivalent pure integrator form   | 75         |
| 3.6.1    | Equivalent multiple integrator system  | 75         |
| 3.6.2    | Transformation of the time-optimal control   | 77         |
| <b>4</b> | <b>Linear autonomous time-optimal regulators</b>   | <b>79</b>  |
| 4.1      | Normal system: theorem on number of switchings in time-optimal control   | 79         |
| 4.2      | Proper system: isochronal hypersurfaces  | 82         |
| 4.3      | Proper system: domain of null controllability  | 85         |
| 4.4      | Single-input, nonoscillatory systems: time-optimal control on state axes and in regions where all state coordinates have same sign | 89         |
| 4.5      | Time-optimal strategy of Gulko <i>et al.</i>   | 94         |
| 4.5.1    | Time-optimal strategy for serially decomposed systems  | 95         |
| 4.5.2    | Application of the time-optimal strategy to the control synthesis problem  | 97         |
| <b>5</b> | <b>First- and second-order time-optimal control system synthesis</b>   | <b>100</b> |
| 5.1      | First-order linear system  | 100        |
| 5.2      | Single-input second-order systems  | 101        |
| 5.2.1    | Systems with real eigenvalues  | 101        |
| 5.2.2    | Systems with complex eigenvalues   | 114        |
| 5.2.3    | Sensitivity of time-optimal systems to parameter variations  | 125        |
| 5.3      | Two-input, second-order systems with negative, real and distinct eigenvalues   | 137        |
| 5.3.1    | Non-normal system: nonuniqueness of optimal control  | 139        |
| 5.3.2    | Normal systems   | 143        |
| 5.4      | Second-order nonlinear systems   | 154        |
| <b>6</b> | <b>Third-order time-optimal control system synthesis</b>   | <b>158</b> |
| 6.1      | Introduction   | 158        |
| 6.2      | Second-order subsystems  | 159        |
| 6.2.1    | Subsystem I: double integrator   | 159        |
| 6.2.2    | Subsystem II: eigenvalues in simple ratio  | 159        |
| 6.2.3    | Subsystem III: integrator-plus-lag   | 160        |
| 6.2.4    | Subsystem IV   | 161        |
| 6.3      | Third-order time-optimal synthesis   | 161        |
| 6.4      | System (a): triple integrator  | 163        |
| 6.5      | Isochronal surfaces for the triple integrator system   | 165        |
| 6.5.1    | Roots of the quartic equation  | 166        |
| 6.5.2    | Unique admissible root of quartic equation   | 171        |
| 6.5.3    | Illustrative examples  | 175        |
| 6.6      | Time-optimal triple integrator system: sensitivity to parameter variation  | 175        |
| 6.6.1    | Case 1: $\hat{a} > a$  | 176        |
| 6.6.2    | Case 2: $0 < \hat{a} < a$  | 179        |
| 6.7      | System (b): real eigenvalues in simple ratio   | 182        |
| 6.7.1    | Case (i): negative real eigenvalues  | 182        |
| 6.7.2    | Case (ii): positive real eigenvalues   | 183        |
| 6.8      | System (c): double integrator-plus-lag   | 184        |

|          |   |            |
|----------|---|------------|
| 6.9      | System (d): subsystem II-plus-lag   | 186        |
| 6.9.1    | Case (i): distinct eigenvalues  | 186        |
| 6.9.2    | Case (ii): repeated eigenvalues   | 188        |
| 6.9.3    | Case (iii): repeated eigenvalues  | 189        |
| 6.10     | System (e): subsystem III-plus-lag  | 190        |
| 6.10.1   | Distinct eigenvalues  | 190        |
| 6.10.2   | Repeated eigenvalues  | 192        |
| 6.11     | System (f): subsystem IV-plus-lag   | 193        |
| <b>7</b> | <b>Fourth-order time-optimal control system synthesis</b>                   | <b>195</b> |
| 7.1      | Introduction  | 195        |
| 7.2      | Third-order subsystems  | 196        |
| 7.2.1    | Subsystem I: triple integrator  | 196        |
| 7.2.2    | Subsystem II: eigenvalues in simple ratio                                   | 197        |
| 7.3      | Fourth-order time-optimal synthesis   | 198        |
| 7.4      | System (a): fourth-order integrator   | 200        |
| 7.5      | System (b): eigenvalues in simple ratio                                     | 202        |
| 7.6      | System (c): subsystem I and first-order element in series                   | 202        |
| 7.7      | System (d): subsystem II and single integrator in series                    | 205        |
| 7.8      | System (e): subsystem II and first-order element in series                  | 206        |
| 7.8.1    | Stable system (i): distinct eigenvalues                                     | 207        |
| 7.8.2    | Stable system (ii): repeated eigenvalues                                    | 208        |
| 7.8.3    | Stable system (iii): repeated eigenvalues                                   | 208        |
| 7.8.4    | Stable system (iv): repeated eigenvalues                                    | 210        |
| 7.8.5    | Unstable plants   | 210        |
| <b>8</b> | <b>Fuel-optimal control problems</b>  | <b>212</b> |
| 8.1      | Fuel-optimal control problems   | 212        |
| 8.2      | Fuel-optimal control of the double integrator system                        | 214        |
| 8.2.1    | Candidate singular controls   | 215        |
| 8.2.2    | Candidate normal controls   | 216        |
| 8.2.3    | Infimum of the value function   | 216        |
| 8.2.4    | $x \in \Gamma$ : optimal $\{\pm 1\}$ control sequence trajectories          | 217        |
| 8.2.5    | $x \in \Sigma_+^0 \cup \Sigma_-^0$ : nonuniqueness of fuel-optimal controls | 218        |
| 8.2.6    | $x \in \Sigma^+ \cup \Sigma^-$ : nonexistence of fuel-optimal controls      | 220        |
| 8.2.7    | Discussion  | 220        |
| 8.3      | Time-fuel-optimal control   | 222        |
| 8.4      | Time-fuel-optimal control of the double integrator system                   | 224        |
| 8.4.1    | $\{\pm 1\}$ -control sequences  | 224        |
| 8.4.2    | $\{0, \pm 1\}$ -control sequences   | 224        |
| 8.4.3    | $\{\mp 1, 0, \pm 1\}$ -control sequences                                    | 227        |
| 8.4.4    | Optimal control synthesis   | 227        |
| 8.4.5    | Value function  | 227        |
| 8.5      | Time-fuel-optimal control of system with eigenvalues in simple ratio        | 229        |
| 8.5.1    | Transformation of variables   | 230        |
| 8.5.2    | Case (i): stable plant  | 231        |
| 8.5.3    | Case (ii): unstable plant   | 234        |
| 8.6      | Time-fuel-optimal control of integrator-plus-lag system                     | 236        |
| 8.7      | Time-fuel-optimal control of integrator plus unstable first-order element   | 239        |
| 8.8      | Time-fuel-optimal control of the triple integrator                          | 239        |
| 8.8.1    | Double integrator subsystem   | 240        |
| 8.8.2    | Switching surfaces in $(\Theta, \Phi)$ -space                               | 241        |

|  |            |
|--|------------|
| <b>9 Minimisation of quadratic and nonquadratic cost functionals</b>                             | <b>245</b> |
| 9.1 Introduction   | 245        |
| 9.2 Quadratic-cost regulator problem   | 246        |
| 9.2.1 Equivalent quadratic cost functional   | 247        |
| 9.2.2 Ideal model and optimal zero-cost trajectories   | 250        |
| 9.2.3 Application of the maximum principle   | 253        |
| 9.2.4 Singular subarcs   | 254        |
| 9.2.5 Nonsingular arcs   | 255        |
| 9.2.6 Example I: singular set $\Gamma^s$ coincident with linear subspace $\Pi$                   | 256        |
| 9.2.7 Example 2: double integrator system  | 259        |
| 9.2.8 Discussion   | 265        |
| 9.3 Nonquadratic-cost regulator problem  | 267        |
| 9.3.1 Application of the maximum principle   | 267        |
| 9.3.2 First-order systems  | 268        |
| 9.3.3 Second-order systems   | 268        |
| 9.3.4 Double integrator system   | 269        |
| 9.3.5 General second-order systems   | 278        |
| 9.3.6 Discussion on nonquadratic-cost problem  | 282        |
| <b>10 Open-loop and quasioptimal feedback control techniques</b>                                 | <b>284</b> |
| 10.1 Introduction  | 284        |
| 10.2 Time-optimal open-loop control  | 285        |
| 10.2.1 Computation of the vector $\eta^0$  | 285        |
| 10.2.2 Nonoscillatory systems: calculation of the switching times                                | 286        |
| 10.3 Quasi-time-optimal predictive control   | 286        |
| 10.3.1 Predictive strategy of Billingsley and Coales   | 288        |
| 10.3.2 Quasi-time-optimal predictive control of a triple integrator plant                        | 288        |
| 10.4 Suboptimal feedback control techniques  | 297        |
| 10.4.1 Linear feedback control of relay systems  | 298        |
| 10.4.2 Quasi-time-optimal nonlinear feedback control of relay and saturating systems             | 298        |
| 10.4.3 Quasi-time-optimal nonlinear feedback control of multiple integrator systems              | 301        |
| 10.4.4 Application of multiple integrator system control to general plants with real eigenvalues | 305        |
| 10.5 Adaptive control  | 313        |
| 10.5.1 Adaptive hyperplanes  | 314        |
| 10.5.2 Adaptive control of a double integrator system with gain parameter uncertainty            | 316        |
| 10.6 Discussion  | 320        |
| <b>11 Concluding remarks</b>   | <b>321</b> |
