Preface	ix
Part I. EVOLUTION and CONTROL: The EXACT THEORY	1
Introduction	1
1.1 The System	4
1.2 Attainability and the Solution Tubes	8
1.3 The Evolution Equation	11
1.4 The Problem of Control Synthesis: A Solution Through Set-Valued Techniques	19
1.5 Control Synthesis Through Dynamic Programming Techniques	28
1.6 Uncertain Systems: Attainability Under Uncertainty	36
1.7 Uncertain Systems: The Solvability Tubes	43
1.8 Control Synthesis Under Uncertainty	49
1.9 State Constraints and Viability	57
1.10 Control Synthesis Under State Constraints	64

1.11 State Constrained Uncertain Systems: Viability Under Counteraction	69
1.12 Guaranteed State Estimation: The Bounding Approach	72
1.13 Synopsis	80
1.14 Why Ellipsoids?	86

Part II. THE ELLIPSOIDAL CALCULUS **91**

Introduction	91
2.1 Basic Notions: The Ellipsoids	93
2.2 External Approximations: The Sums Internal Approximations: The Differences	104
2.3 Internal Approximations: The Sums External Approximations: The Differences	121
2.4 Sums and Differences: The Exact Representation	128
2.5 The Selection of Optimal Ellipsoids	132
2.6 Intersections of Ellipsoids	143
2.7 Finite Sums and Integrals: External Approximations	161
2.8 Finite Sums and Integrals: Internal Approximations	170

Part III. ELLIPSOIDAL DYNAMICS: EVOLUTION and CONTROL SYNTHESIS **177**

Introduction	177
3.1 Ellipsoidal-Valued Constraints	178
3.2 Attainability Sets and Attainability Tubes: The External and Internal Approximations	182

3.3	Evolution Equations with Ellipsoidal-Valued Solutions . . .	190
3.4	Solvability in Absence of Uncertainty	194
3.5	Solvability Under Uncertainty	198
3.6	Control Synthesis Through Ellipsoidal Techniques	208
3.7	Control Synthesis: Numerical Examples	214
3.8	Ellipsoidal Control Synthesis for Uncertain Systems . . .	225
3.9	Control Synthesis for Uncertain Systems: Numerical Examples	230
3.10	Target Control Synthesis Within Free Time Interval . . .	242
 Part IV. ELLIPSOIDAL DYNAMICS: STATE ESTIMATION and VIABILITY PROBLEMS		247
	Introduction	247
4.1	Guaranteed State Estimation: A Dynamic Programming Perspective	249
4.2	From Dynamic Programming to Ellipsoidal State Estimates	259
4.3	The State Estimates, Error Bounds, and Error Sets	264
4.4	Attainability Revisited: Viability Through Ellipsoids	268
4.5	The Dynamics of Information Domains: State Estimation as a Tracking Problem	273
4.6	Discontinuous Measurements and the Singular Perturbation Technique	285
	 Bibliography	 291
	 Index	 319
