

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Notations and Terminology	3
1.3	Statement of H_∞ Optimization Problem	4
1.4	Preview of Chapters	8
2	Linear System Tools	11
2.1	Jordan and Real Jordan Canonical Forms	12
2.2	Brunovsky and Block Diagonal Controllability Forms	14
2.3	Special Coordinate Basis	20
2.4	Proofs of Properties of Special Coordinate Basis	37
3	Existence Conditions of H_∞ Suboptimal Controllers	49
3.1	Continuous-time Systems	49
3.2	Discrete-time Systems	54
4	Bilinear Transformations and Discrete Riccati Equations	59
4.1	Structural Mappings of Bilinear Transformations	60
4.1.1	Continuous-time to Discrete-time	61
4.1.2	Discrete-time to Continuous-time	67
4.1.3	Proof of Theorem 4.1.1	72
4.2	Solutions to Discrete-time Riccati Equations	86
4.2.1	Solution to a General DARE	86
4.2.2	Solution to an H_∞ -DARE	90
5	Infima in Continuous-time H_∞ Optimization	101
5.1	Full Information Feedback Case	102
5.2	Output Feedback Case	111
5.3	Plants with Imaginary Axis Zeros	121

6	Solutions to Continuous-time H_∞ Problem	131
6.1	Full State Feedback	132
6.2	Full Order Output Feedback	140
6.3	Reduced Order Output Feedback	146
6.4	Proofs of Main Results	153
7	Continuous-time H_∞ Almost Disturbance Decoupling	165
7.1	Introduction	165
7.2	Solvability Conditions	168
7.3	Solutions to Full State Feedback Case	172
7.4	Solutions to Output Feedback Case	179
7.4.1	Full Order Output Feedback	180
7.4.2	Reduced Order Output Feedback	182
7.5	Proofs of Main Results	186
8	Infima in Discrete-time H_∞ Optimization	203
8.1	Full Information Feedback Case	203
8.2	Output Feedback Case	215
8.3	Plants with Unit Circle Zeros	220
9	Solutions to Discrete-time H_∞ Problem	223
9.1	Full Information and State Feedbacks	224
9.2	Full Order Output Feedback	229
9.3	Reduced Order Output Feedback	234
10	Discrete-time H_∞ Almost Disturbance Decoupling	241
10.1	Introduction	241
10.2	Solvability Conditions	243
10.3	Solutions to State and Full Information Feedback Cases	246
10.4	Solutions to Measurement Feedback Case	254
10.4.1	Full Order Output Feedback	255
10.4.2	Reduced Order Output Feedback	258
10.5	Proofs of Main Results	262
11	A Piezoelectric Actuator System Design	283
11.1	Introduction	283
11.2	Linearization of the Nonlinear Hysteretic Dynamics	287
11.3	Formulation of the Problem as an H_∞ -ADDPMS	289
11.4	Final Controller and Simulation Results	297

12 A Gyro-stabilized Mirror Targeting System Design	309
12.1 Introduction	309
12.2 The Free Gyro-stabilized Mirror System	310
12.3 Controller Design Using an H_∞ Approach	316
12.4 Simulation and Implementation Results	321
13 An Open Problem	333
Bibliography	337
Index	349
