Foreword	xi
A Presentation of the Mumford-Shah Functional	
1 The Mumford-Shah functional and image segmentation	1
2 Definition of the functional	5
3 Minimizing in u with K fixed	8
4 H^{n-1} is not semicontinuous but J has minimizers	11
5 Simple examples, no uniqueness, but few butterflies in Hong-Kong	14
6 The Mumford-Shah conjecture and some known results	30
7 Many definitions of almost- and quasiminimizers	36
8 Reduced minimizers and pairs, coral pairs	50
B Functions in the Sobolev Spaces $W^{1,p}$	
9 Absolute continuity on lines	63
10 Some removable sets for $W^{1,p}$	67
11 Composition with other functions	71
12 Poincaré estimates for $f \in W^{1,p}(\Omega)$	75
13 Boundary values and restrictions to hypersurfaces	80
14 A simple welding lemma	86
15 Energy-minimizing functions with prescribed boundary values	90
16 Energy minimizers for an increasing union of open sets	95
17 Conformal invariance and the Neumann condition	98
C Regularity Properties for Quasiminimizers	
18 Local Ahlfors-regularity: the statements	105
19 A small density result	113
20 Proof of local Ahlfors-regularity in dimension 2: the scheme	114
21 Energy estimates for the Ahlfors-regularity result ($n = 2$)	122
22 Simple estimates on the Poisson kernel	137
23 Carleson measures	143

24	The property of projections ($n = 2$)	148
25	The concentration property ($n = 2$)	155
26	Average number of points on a circle	160
27	Uniform rectifiability when $n = 2$	163
28	The co-area formula	168
29	K contains big pieces of connected sets locally	170
30	Simple arcs in connected sets with finite H^1 -measure	186
31	Big pieces of connected sets and uniform rectifiability	191
32	Application to quasiminimizers and a temporary conclusion	204

D Limits of Almost-Minimizers

33	Vitali covering lemmas	207
34	Local Hausdorff convergence of sets	213
35	Uniform concentration and lower semicontinuity of Hausdorff measure	217
36	A little more on the existence of minimizers	222
37	Limits of admissible pairs	227
38	Limits of local almost-minimizers are local topological almost-minimizers	234
39	Limits of almost-minimizers up to the boundary	257
40	Blow-up limits	266

E Pieces of C^1 Curves for Almost-Minimizers

41	Uniform rectifiability, the Peter Jones numbers $\beta(x, r)$, and why K is flat in many places	272
42	Lower bounds on the jump of u when K is flat and ∇u is small	278
43	Normalized jumps often tend to get larger	282
44	On the size of the holes in K	284
45	$\omega_p^*(x, r)$ (sometimes with flatness) controls the surface and energy inside	288
46	Simple consequences when $n = 2$, and the existence of good disks	293
47	Bonnet's lower bound on the derivative of energy	297
48	The main estimate on the decay of the normalized energy $\omega_2(x, r)$ ($n = 2$)	310
49	Self-improving sets of estimates ($n = 2$)	315
50	Three conditions for K to contain a nice curve ($n = 2$)	321
51	$K \cap B(x, r)$ is often a nice C^1 curve ($n = 2$)	332
52	Jump and flatness control surface and energy	338
53	Similar results with spiders and propellers ($n = 2$)	344

F Global Mumford-Shah Minimizers in the Plane

54 Global minimizers in \mathbb{R}^n and a variant of the Mumford-Shah conjecture 355

55 No bounded connected component in $\mathbb{R}^2 \setminus K$ 362

56 No thin connected component in $\mathbb{R}^2 \setminus K$ either; John domains 367

57 Every nontrivial connected component of K is a chord-arc tree 370

58 The case when u is locally constant somewhere ($n = 2$) 380

59 Simple facts about lines and propellers; blow-in limits 391

60 Another regularity result for local almost-minimizers; points of low energy 396

61 Bonnet’s theorem on connected global minimizers 401

62 Cracktip is a global minimizer 414

63 The magic formula with $(\frac{\partial u}{\partial z})^2$ in terms of K 431

64 The case when K is contained in a countable union of lines 442

65 Another formula, with radial and tangential derivatives 447

66 $\mathbb{R}^2 \setminus K$ is connected when (u, K) is an exotic global minimizer 453

67 Points of high energy, the singular singular set K^\sharp 463

G Applications to Almost-Minimizers ($n = 2$)

68 No small loop in K , the chord-arc and the John conditions 469

69 Spiral points 475

70 Two last regularity results 489

71 From the Mumford-Shah conjecture in the plane to its local version 493

H Quasi- and Almost-Minimizers in Higher Dimensions

72 Local Ahlfors-regularity for quasiminimizers 495

73 Uniformly rectifiable sets of all dimensions 512

74 Uniform rectifiability for quasiminimizers 518

75 C^1 regularity almost-everywhere for almost-minimizers 523

76 What is a Mumford-Shah conjecture in dimension 3? 528

I Boundary Regularity

77 Ahlfors-regularity near the boundary 539

78 A reflection trick 551

79 Boundary regularity for almost-minimizers in dimension 2 559

80 A few questions 570

References 573
