Preface	
Prologue	1
Chapter I Foundations	5
I.0 Introduction	5
I.1 Controlled diffusions	5
I.2 Typical control problems	13
I.3 A selection theorem	20
I.4 Notes and references	20
Chapter II Compactness of laws	
II.0 Introduction	23
II.1 Compactness under admissible controls	23
II.2 Compactness under Markov controls	28
II.3 Existence of optimal controls	35
II.4 Sufficiency of Markov controls	38
II.5 Further compactness results	43
II.6 Notes and references	50
Chapter III Dynamic programming	53
III.0 Introduction	53
III.1 The principle of optimality	54
III.2 The Hamilton-Jacobi-Bellman (HJB) equation	62
III.3 The Nisio semigroup	71
III.4 Notes and references	82
Chapter IV The degenerate case	84
IV.0 Introduction	84
IV.1 Markov selections	84
IV.2 The degenerate H.J.B. equation	92
IV.3 Notes and references	96

Chapter V Control under partial observations	99
V.0 Introduction	99
V.1 Nonlinear filtering	100
V.2 The separated control problem	115
V.3 Existence of optimal controls	122
V.4 The Nisio semigroup	133
V.5 Notes and references	139
Chapter VI Ergodic control	142
VI.0 Introduction	142
VI.1 Existence in the near-monotone case	142
VI.2 Existence in the stable case	147
VI.3 H.J.B. equation in the near-monotone case	155
VI.4 H.J.B. equation in the stable case	165
VI.5 The degenerate case	172
VI.6 Notes and references	175
Chapter VII Adaptive control	178
VII.0 Introduction	178
VII.1 Parameter estimation	179
VII.2 Parameter dependence of the value function	182
VII.3 Self-tuning control	186
VII.4 Notes and references	191
Epilogue	193
