

Table of Contents

Part 1	Control systems in Euclidean Spaces	
Chapter 1	Examples of control systems	1
1.1	Switching control of linear oscillators	1
1.2	Service trolley	9
1.3	Sounding rocket	15
1.4	Notes	18
Chapter 2	Differential equations	21
2.1	Classical ODE theory: existence	23
2.2	Continuation of solutions	34
2.3	Uniqueness	39
2.4	Dependence on data	53
2.5	Equations discontinuous in time	65
2.6	Notes	73
Chapter 3	Control systems	77
3.1	Control systems: generalities	78
3.2	Systems with linear controls	90
3.3	Linear systems: classical theory	105
3.4	Linear systems: observability	127
3.5	Linear systems: point controllability	133
3.6	Bilinear systems	146
3.7	Notes	164

Part 2 Control systems in the plane

Chapter 4	Local behavior	169
4.1	Critical points, transversal points	170
4.2	Solutions, trajectories	174
4.3	Characteristic rectangles	180
4.4	Classification of noncritical points	190
Chapter 5	Controllability, attainability	195
5.1	Point controllability	196
5.2	Attainable set boundaries	203
5.3	Planar bang–bang theorem	219
Chapter 6	Index theory	223
6.1	Classical index theory	223
6.2	Index for discontinuous paths	234
6.3	The index in control theory	240
6.4	Notes	244
Chapter 7	Optimisation	245
7.1	Necessary conditions	246
7.2	Developments; applications	254
7.3	Notes	268
