

TABLE OF CONTENTS

Chapter 1. INTRODUCTION	
1.1 State-space representations and matrix fraction descriptions of multivariable systems	1
1.2 Fundamental properties of λ -matrices	5
1.3 Organization of chapters	8
CHAPTER 2. CHARACTERISTIC λ -MATRICES AND CANONICAL MATRIX FRACTION DESCRIPTIONS OF MIMO SYSTEMS	
2.1 Characteristic λ -matrices of reachable and observable systems	12
2.2 Canonical matrix fraction descriptions (MFDs) of MIMO systems	18
2.3 Minimal nice selections for determining Kronecker and observability indices	27
2.4 Illustrative examples	33
CHAPTER 3. SPECTRAL ANALYSIS OF NONSINGULAR λ -MATRICES	
3.1 Canonical λ -matrices and canonical MFDs of MIMO systems	39
3.2 Latent structure of nonsingular λ -matrices	46
3.3 Solvents of nonsingular λ -matrices	61
3.4 Illustrative examples	67
CHAPTER 4. DIVISORS AND SPECTRAL FACTORS OF NONSINGULAR λ -MATRICES	
4.1 Structure theorems for canonical left divisors and complete sets of canonical left divisors	75
4.2 Structure theorems for canonical right divisors and complete sets of canonical right divisors	85
4.3 Structures theorems for spectral factorization of nonsingular λ -matrices	89
4.4 Computational aspects of divisors and spectral factors for λ -matrices .	94
4.5 Illustrative examples	112
CHAPTER 5. FEEDBACK CONTROL OF MULTIVARIABLE SYSTEMS	
5.1 Linear state-feedback controls and properties	123
5.2 λ -matrix assignment	126

5.3	Left and right latent structure assignment	135
5.4	Divisor assignment and decoupling design of MIMO systems	142
CHAPTER 6. STRUCTURAL DECOMPOSITION THEORIES AND APPLICATIONS IN MULTIVARIABLE CONTROL SYSTEMS		
6.1	Parallel decomposition theories and their applications to MIMO systems and circuits	156
6.2	Semi-cascade decomposition theories and their applications to modal controls of MIMO systems	173
6.3	Cascade decomposition theories and their applications to multiport network synthesis	189
