Contents

PART 1 STATIC HYSTERON 1

1. Short-memory transducer 1
   - 1.1 Transducer 1
   - 1.2 States of transducer 2
   - 1.3 Some properties of transducers 3
   - 1.4 Admissible inputs 4
   - 1.5 Vibro-correctness 6

2. Generalized play 6
   - 2.1 Ordinary play 6
   - 2.2 Generalized play with piecewise monotone inputs 8
   - 2.3 Estimates 10
   - 2.4 Generalized play with continuous inputs 14
   - 2.5 Dependence of outputs upon initial states 15
   - 2.6 Correctness of the definition of the play 16
   - 2.7 Monotonicity 17
   - 2.8 Periodic inputs 19
   - 2.9 Inputs defined on the whole real axis 20

3. Hysteron 22
   - 3.1 Stop 22
   - 3.2 Determining systems of curves 24
   - 3.3 Piecewise monotone inputs 28
   - 3.4 Passage to arbitrary continuous inputs 28

4. Canonical representation of hysteron and proof of Theorem 3.2 30
   - 4.1 Canonical hysteron 30

4.2 Canonical representation theorem 32
4.3 Proof of Theorem 3.2 35
4.4 Properties of hysteron 35
4.5 Rectification of hysteron 39

5. Distances 40
5.1 Definition of distance 40
5.2 Estimates on differences of output signals 43

6. Various input spaces 47
6.1 Statement of the problem 47
6.2 Spaces of continuously differentiable functions 48
6.3 Play in the space S of absolutely continuous functions 50
6.4 Hysteron in the space S 51
6.5 Hysterons in spaces H_α 53
6.6 Discontinuous inputs 54
6.7 Hysteron in the space of functions with bounded variation 56
6.8 Hysteron in Wiener spaces 57

PART 2 IDENTIFICATION THEOREM 59

7. Identification problem 59
7.1 General identification problem 59
7.2 Prehysteron 61
7.3 Basic identification theorem 63
7.4 Concluding remarks 64

8. Proof of Theorem 7.1 65
8.1 Singular points of the domain $\Omega(V)$ 65
8.2 Construction of curves $\Pi(M)$ 69
8.3 Construction of curves Φ_ℓ, Φ_r 74
8.4 Completion of the proof of Theorem 7.1 75

9. α - identifiability 78
9.1 Statement of the problem 78
9.2 Normal hysteron 79
9.3 Theorem on α- identification 80
9.4 A remark 81

10. Approximate construction of hysteron 81

10.1 Distance between hysterons 81
10.2 Bounded inputs 86
10.3 Frames of hysterons 88
10.4 Approximation by operators different from hysterons 90

PART 3 VIBRO-CORRECT DIFFERENTIAL EQUATIONS AND VARIABLE HYSTERONS 94

11. Necessary condition of vibro-correctness 94
11.1 Integrator 94
11.2 Simple examples 96
11.3 Necessary condition of vibro-correctness 97
11.4 Vibro-correctness in a point 102

12. Sufficient condition of vibro-correctness 103
12.1 Main result 103
12.2 An auxiliary equation 105
12.3 A substitution 107
12.4 Proof of Theorem 12.1 109
12.5 Lemma on differential inequalities 110
12.6 Vibro-correctness on smooth inputs 111

13. Vibro-solutions 113
13.1 Definition 113
13.2 Global vibro-correctness 115
13.3 Inputs on finite time interval 117
13.4 Inputs on infinite time interval 119

14. Equations with constraints 122
14.1 Equations with discontinuous right-hand sides 122
14.2 Arbitrary continuous constraints 125
14.3 Vibro-correct equations with constraints 128
14.4 Properties of vibro-solutions to equations with constraints 132
14.5 Vibro-solutions of parametrized equations 134

15. Variable hysteron 138
15.1 Description of hysteron by differential equations 138
15.2 Variable hysteron 139
15.3 Variable hysteron governed by differential equations 143
15.4 Infinitesimal hysteron 145
15.5 A special class of transducers 147

PART 4 MULTIDIMENSIONAL HYSTERONS 151

16. Multidimensional play and stop defined on smooth inputs 151
16.1 A simple example 151
16.2 A general notion 154
16.3 Correctness of the definitions of play and stop 158
16.4 Properties of play and stop 160
16.5 On the classical solutions of equations with discontinuous right-hand sides 160

17. Strictly convex characteristics 162
17.1 Vibro-correctness modulus 162
17.2 Hölder condition 164
17.3 Passage to continuous inputs 166
17.4 Strong convergence 167
17.5 Perturbation of characteristics 167
17.6 Vibro-correctness modulus and differential inclusions 170
17.7 Lower bound for vibro-correctness moduli 175

18. Polyhedral characteristics 177
18.1 Basic theorems 177
18.2 Estimates of the Lipschitz constant 179
18.3 Proofs of Lemma 18.1 and Theorem 18.4 181
18.4 Proof of Theorem 18.3 184
18.5 Remarks 186

19. Arbitrary convex characteristics 187
19.1 Vibro-correctness of play and stop 187
19.2 Estimate for the variation of output 189
19.3 Proof of Theorem 19.1 191

20. Inputs with summable derivatives 193
20.1 Statement of the problem 193
20.2 Lipschitz condition 194
20.3 Remarks 196

21. Vibro-correct equations with vector input 196
21.1 Statement of the problem 196
21.2 Frobenius condition 198
21.3 Necessary condition of vibro-correctness 200
21.4 Sufficient condition of vibro-correctness 204
21.5 Remarks 205

22. Equations with vector inputs and smooth constraints 206
22.1 Constraints 206
22.2 Planar motion 208
22.3 Other descriptions 209

PART 5 DISCONTINUOUS NONLINEARITIES 212

23. Static elements 212
23.1 Continuous characteristics 212
23.2 Elements with discontinuous characteristics 214
23.3 Estimates of outputs 216
23.4 Proper characteristics 219
23.5 Continuity on a fixed input 220
23.6 Additional remarks 221

24. Elements with monotone characteristics 223
24.1 Cones 223
24.2 Special classes of cones 224
24.3 Monotone characteristics 226
24.4 Proof of Theorem 24.1 228
24.5 Proof of Theorem 24.2 230
24.6 Remarks 231

25. Elements with multi-valued characteristics 233
25.1 Selection problem 233
25.2 General theorems on selectors 234
25.3 Monotone selectors 238
25.4 Measurable selectors 240
25.5 Input-output relations 241

26. Closures of static element 243
26.1 Closure of transducer 243
26.2 Characteristic of the closure 244
26.3 Closure modulo a negligence class 247
26.4 Comments 248

27. Weak closures and convexification procedure 249
27.1 Weak closures 249
27.2 Convexification 251
27.3 Weak closures and convexification of static element 252
27.4 Proof of Theorem 27.1 253
27.5 Proof of Theorem 27.2 257

27.6 Convexification of static element modulo negligence class 259
27.7 Examples of open nonlinear systems composed of static elements 260

28. Relay 262
28.1 Ideal relay 262
28.2 Non-ideal relay 263
28.3 Periodic inputs 266
28.4 Closure of relay 268
28.5 Convexification of relay 269
28.6 Relay and "slow" controls 271
28.7 Discontinuous inputs 272

PART 6 SELF-MAGNETIZATION PHENOMENON 274

29. Madelung's hysterons 274
29.1 Non-correct prehysteron 274
29.2 Periodic inputs 277
29.3 Madelung's prehysteron 277
29.4 Properties of Madelung's prehysteron 279
29.5 Madelung's hysteron 281
29.6 Discontinuous inputs with bounded variation 284

30. Proofs of Theorems 29.1 and 29.2 285
30.1 Passage to classical solutions 285
30.2 Lemma on differential inequalities 288
30.3 Proof of Theorem 29.1 289
30.4 Proof of Theorem 29.2 293

31. Response to small perturbations of the input 294
31.1 General scheme 294
31.2 Intensities 296
31.3 Construction of κ-outputs to Madelung's hysteron 299
31.4 Construction of κ-vibrosolutions to differential equations 304
31.5 Construction of κ-outputs for hysterons 311

32. Closure modulo sets of Wiener measure zero 311
32.1 A general scheme 311
32.2 Main theorem 312

32.3 Passage to integral equations 314
32.4 Equations with constraints 317
32.5 Implications for stochastic equations 317

PART 7 COMPLEX HYSTERESIS NONLINEARITIES 320

33. Parallel connections and bundles of hysterons 320
33.1 Complex nonlinearities 320
33.2 Parallel connections 321
33.3 Completely controllable restrictions 323
33.4 Periodic inputs 326
33.5 An important example 330
33.6 Remarks 331

34. Sequential connections of hysterons 332
34.1 Sequential connections and cascades 332
34.2 Sequential connections of plays and stops 335
34.3 Compensators 338
34.4 Complex connections 341

35. Ishlinskii's material 342
35.1 Continual systems of hysterons 342
35.2 Ishlinskii's transducer 343
35.3 Loading and unloading functions 346
35.4 Normal states of Ishlinskii's transducer 351
35.5 Periodic inputs 354
35.6 Davidenkov's model 357
35.7 Controllable restrictions of Ishlinskii's bundles 358

36. Properties of Ishlinskii's transducer 359
36.1 Continuity of Ishlinskii's operator 359
36.2 Correctness with respect to weight functions 363
36.3 Unilateral estimates 365

37. Finite systems of relays 367
37.1 Block-diagrams with relays 367
37.2 Parallel connections and bundles of relays 367
37.3 Independent perturbations of inputs 369
37.4 General perturbation of input 370

38. Continual systems of relays 371
38.1 Bundles of relays and CRS-transducers 371

38.2 Monotonicity of CRS-transducers 373
38.3 Demagnetization function 373
38.4 Periodic inputs 374
38.5 Evaluation of outputs 375
38.6 Vibro-correctness 377
38.7 Controllable restrictions 381

39. Rheological models 384
39.1 Construction of the model 384
39.2 Graphs 386
39.3 Transducer M 389
39.4 Properties of the transducer M 391
39.5 Transducer W 393
39.6 Remarks 395
