PART I

The Weierstrass integral J

Chapter 1

A Reimannian manifold

§1. A differentiable manifold M_n.

§2. M_n as Riemannian manifold.

Chapter 2

Local Weierstrass integrals

§3. Weierstrass preintegrands.

§4. The homogeneity of preintegrands.

§5. The compatibility of preintegrands.

PART II

The Euler equations

Chapter 3

The Euler-Riemann equations

§6. The Weierstrass nonsingularity condition.

§7. Euler-Riemann equations.

§8. From Weierstrass $F(u,r)$ to Euler $f(x,y,p)$.

Chapter 4

Conjugate points

§9. Proper polar families of extremal arcs.

§10. Conjugate points and their multiplicities.

§11. The measure of degenerate extremal joins.

PART III

Minimizing arcs

Chapter 5

Necessary conditions

§12. Necessity of the Euler condition.

§13. The Weierstrass necessary condition.

§14. Weak minima and positive regularity.

§15. The positive regularity of W-preintegrands.

§16. The necessity of the Jacobi condition.

Chapter 6

Sufficient conditions

§17. A Hilbert integral H_F.

§18. Three conditions sufficient for a relative minimum.

PART IV

Preparation for Global Theorems

Chapter 7

Elementary extremals

§19. Field radii and elementary extremals.

§20. J-distances $\Delta(p,q)$.

§21. Broken extremals joining A_1 to A_2.

Chapter 8

Non-simple extremals

§22. Tubular mappings π into M_n.

§23. W-preintegrands F^π, π a regular tubular mapping.

PART V

Global Theorems

Chapter 9

Simplifying concepts

§24. I. Extremal nondegeneracy; II. Singleton extremals.

§25. Theorem on index functions.

Chapter 10

Reduction to critical point theory

§26. Extremal homology relations under a finite J level.

§27. Fréchet numbers $\underset{\sim}{R}_i$ and related global theorems.

§28. Introduction to proof of Global Theorem 27.1.

Appendix I. The existence of regular tubular mappings.

Appendix II. Minimizing extremals, phasewise near a minimizing extremal.

Appendix III. The differentiable product manifold $(M_n)^\nu$.

Appendix IV. The existence of the tractions T_i of §26.
