

## TABLE OF CONTENTS

PREFACE . . . . .		iii
CHAPTER I: CONTROL SYSTEMS: PRELIMINARIES . . . . .		1
1. Control System Formulation . . . . .		1
2. Linear Systems and Linearization . . . . .		7
3. Basic Properties of Linear Systems . . . . .		16
CHAPTER II: OBSERVABILITY AND CONTROLLABILITY . . . . .		31
1. Observability and Reconstruction . . . . .		31
2. Controllability and Steering Functions . . . . .		49
3. General Theory, Duality . . . . .		61
4. Controllability of Nonlinear Systems Near an Equilibrium Point . . . . .		79
CHAPTER III: ALGEBRAIC THEORY OF LINEAR CONSTANT COEFFICIENT CONTROL SYSTEMS . . . . .		93
1. Asymptotic Stability and Liapounov's Matrix Equation . . . . .		93
2. Stabilization via Linear Feedback Control . . . . .		112
3. Control Canonical Form, Eigenvalue Specification . . . . .		123
4. Stabilization with Restricted Feedback, Observation Canonical Form, Observer Theory . . . . .		151
5. Transfer Matrices and Transfer Functions . . . . .		171
CHAPTER IV: OPTIMAL CONTROL WITH QUADRATIC PERFORMANCE CRITERIA AND RELATED TOPICS . . . . .		189
1. Quadratic Performance Criteria . . . . .		189
2. Optimal Control on a Finite Time Interval . . . . .		195
3. Optimal Control of Constant Coefficient Systems on an Infinite Time Interval . . . . .		210
4. Solution of Quadratic Matrix Equations . . . . .		225
5. Related Topics: Optimization and Liapounov's Method, Dynamic Programming, Regulation of Nonlinear Systems . . . . .		235
CHAPTER V: COMPUTATIONAL METHODS . . . . .		277
1. Solution of Quadratic Matrix Equations Using Potter's Method . . . . .		277
2. The Kleinman-Newton Method . . . . .		284
3. Iterative Solution of Linear Matrix Equations . . . . .		291

4. Integration of the Matrix Riccati Differential Equation in the Constant Coefficient Case . . . . .	303
CHAPTER VI: OPTIMAL CONTROL AND ESTIMATION FOR LINEAR STOCHASTIC SYSTEMS . . . . .	329
1. Preliminaries . . . . .	329
2. Linear Systems with White Noise Disturbance . . . . .	338
3. The Calculus of Matrix Functions . . . . .	355
4. Optimal Feedback Control for Linear Stochastic Systems on a Finite Interval . . . . .	362
5. Optimal Feedback Control for Constant Linear Stochastic Systems on an Infinite Interval . . . . .	367
6. Optimal State Estimation (Filtering) and the Separation Theorem . . . . .	377
7. Formulation and Interpretation: An Example . . . . .	392
CHAPTER VII: ASPECTS OF LINEAR SYSTEM DESIGN . . . . .	411
1. Preliminaries . . . . .	411
2. Multiple Control Objectives . . . . .	415
3. Model Following . . . . .	435
4. Tracking a Command Input . . . . .	457
5. Cost Sensitivity Reduction . . . . .	492
6. Robustness and Maneuverability . . . . .	512
INDEX . . . . .	549
