PREFACE	v
DEDICATION	vi
1. INTRODUCTION	1
1.1 References	8
2. NON-LINEAR-QUADRATIC CONTROL PROBLEMS	9
2.1 Exponential Performance Criterion - Perfect Measurements	9
2.1.1 Discrete-time Formulation	9
2.1.2 Discrete-time Solution	11
2.1.3 Properties of Discrete-time Solution ($\sigma = -1$)	15
2.1.4 Properties of Discrete-time Solution ($\sigma = +1$)	17
2.1.5 Relation to Discrete-time Games	18
2.1.6 Continuous-time Formulation	19
2.1.7 Continuous-time Solution	20
2.1.8 Relation to Differential Games	21
2.1.9 Stability Properties	22
2.2 Exponential Performance Criterion - Noisy Measurements	24
2.2.1 Discrete-time Formulation	25
2.2.2 Discrete-time Solution - Terminal Cost Only	27
2.2.3 Discrete-time Solution - The General Case	32
2.2.4 No Process Noise	35
2.2.5 Continuous-time Formulation	38
2.2.6 A Note on Separation	40
2.2.7 A Further Separation Property	41
2.3 Non-linear Stochastic Systems	43
2.3.1 Discrete-time Formulation	43
2.3.2 Solution	45
2.3.3 Known Special Cases	47
2.3.4 Novel Special Cases	49
2.4 Infinite-time Optimal Control	50

2.4.1	Continuous-time Formulation	50
2.4.2	Bellman-type Theorems	51
2.4.3	Certain Non-linear Problems	54
2.4.4	Non-quadratic Performance Criterion	56
2.5	Systems Homogeneous-in-the-input	57
2.5.1	Formulation	57
2.5.2	Stabilizability	58
2.5.3	A Bilinear Example	59
2.5.4	Optimal Control	60
2.5.5	Non-homogeneous Extension	64
2.6	Optimal Control of Quadratic Systems	65
2.6.1	Formulation	65
2.6.2	Solutions	66
2.7	Conclusion	69
2.8	References	71
3.	COPOSITIVE MATRICES, NON-CONVEX QUADRATIC FORMS AND QUADRATIC DIFFERENTIAL EQUATIONS	73
3.1	Introduction to Copositive Matrices	73
3.1.1	Properties of Copositive Matrices	74
3.2	Extensions	79
3.2.1	General Linear Constraints	79
3.2.2	An Example	82
3.2.3	Application to Quadratic Programming	83
3.2.4	Stochastically Copositive Matrices	85
3.2.5	Symmetric M-Matrices	87
3.2.6	Generalization of Finsler's Theorem	90
3.2.7	Application of Generalized Finsler Theorem	95
3.3	Quadratic Differential Equations	97
3.3.1	Finite Escape Times	98
3.3.2	Matrix Riccati Equation	105
3.3.3	An Example	108
3.3.4	Models in Population Dynamics	110
3.4	Invariant Sets	112
3.4.1	An Example	115
3.4.2	General Case	116

3.5	Conclusion	119
3.6	References	120
4.	NON-NEGATIVITY CONDITIONS FOR CONSTRAINED AND NON-QUADRATIC FUNCTIONALS	123
4.1	Linear-Quadratic Case	123
4.1.1	Non-negativity Conditions	124
4.1.2	Novel Non-negativity Conditions	129
4.1.3	Example	133
4.2	Constrained Case	134
4.2.1	Formulation	134
4.2.2	Sufficiency Conditions	134
4.3	Non-linear Systems	141
4.3.1	Formulation	142
4.3.2	Non-negativity Conditions	143
4.3.3	An Application	144
4.4	Conclusion	148
4.5	References	149
5.	CONTROLLABILITY OF CONSTRAINED LINEAR AUTONOMOUS SYSTEMS	151
5.1	Introduction	151
5.1.1	Unconstrained Case	152
5.1.2	Zero Interior to Ω	153
5.1.3	Reachable Sets	155
5.1.4	Zero Interior to $\text{Conv hull}(\Omega)$	157
5.1.5	Global and Non-linear Results	160
5.2	Zero not Interior to Constraint Set or its Convex Hull	161
5.2.1	Oscillatory Systems	161
5.2.2	Brammer's Theorem	163
5.2.3	Global Results	166
5.3	Arbitrary-interval Null-controllability	167
5.3.1	Preliminary Results	169
5.3.2	Necessary and Sufficient Conditions	173
5.3.3	Necessary Conditions	177
5.3.4	Necessary and Sufficient Conditions - Finitely Generated Cones	179

5.3.5	Examples	183
5.3.6	Minimum Time Function	186
5.3.7	Further Necessary Conditions and Sufficient Conditions	188
5.3.8	Further Special Cases	194
5.4	Conclusion	195
5.5	References	196
5.A	Appendix	197
6.	NEW APPROACHES TO FUNCTION MINIMIZATION	199
6.1	Introduction	199
6.2	Homogeneous Models	200
6.2.1	Relation to Newton's Formula	201
6.2.2	Algorithms based upon Homogeneous Functions	202
6.3	Differential Descent	204
6.3.1	Outline of the Approach	204
6.4	Conclusion	209
6.5	References	209
7.	CONCLUSION	211
	AUTHOR INDEX	213
	SUBJECT INDEX	215
