

# TABLE OF CONTENTS

SECTION	PAGE
FOREWORD.....	iii
<b>CHAPTER I</b>	
<b>THE FIXED END POINT PROBLEM IN NON-PARAMETRIC FORM</b>	
1. The Euler equations.....	1
2. The existence of extremals.....	4
3. The necessary conditions of Weierstrass and Legendre.....	5
4. The Jacobi condition.....	7
5. Conjugate points.....	9
6. The Hilbert integral.....	13
7. Sufficient conditions.....	15
<b>CHAPTER II</b>	
<b>GENERAL END CONDITIONS</b>	
1. The end conditions.....	18
2. The transversality condition.....	20
3. The second variation.....	21
4. The accessory boundary problem.....	24
5. The necessary condition on the characteristic roots.....	26
6. The non-tangency hypothesis.....	28
7. The form $Q(u, \lambda)$ .....	30
8. Sufficient conditions.....	33
<b>CHAPTER III</b>	
<b>THE INDEX FORM</b>	
1. Definition of the index form.....	37
2. Properties of the index form.....	42
3. Conjugate families.....	46
4. Necessary conditions, one end point variable.....	49
5. Focal points.....	51
6. The index of $g$ in terms of focal points.....	55
7. Certain lemmas on quadratic forms.....	61
8. Two end manifolds.....	64
9. Periodic extremals, a necessary condition.....	70
10. The order of concavity.....	71
11. The index of a periodic extremal.....	74
<b>CHAPTER IV</b>	
<b>SELF-ADJOINT SYSTEMS</b>	
1. Self-adjoint differential equations.....	80
2. A representation of self-adjoint boundary conditions.....	83
3. Boundary problems involving a parameter.....	89
4. Comparison of problems with different boundary conditions.....	92
5. A general oscillation theorem.....	95

6. The existence of characteristic roots.....	97
7. Comparison of problems possessing different forms $\omega$ .....	99
8. Boundary conditions at one end alone.....	102

## CHAPTER V

## THE FUNCTIONAL ON A RIEMANNIAN SPACE

1. A Riemannian space in the large.....	107
2. Basic tensors.....	111
3. The necessary conditions of Euler, Weierstrass, and Legendre.....	113
4. Extremals.....	115
5. Conjugate points.....	117
6. The Hilbert integral.....	119
7. Sufficiency theorems.....	120
8. The Jacobi equations in tensor form.....	122
9. The general end conditions.....	126
10. The second variation.....	126
11. The accessory problem in tensor form.....	127
12. The non-tangency condition.....	131
13. Characteristic solutions in tensor form.....	133
14. The general index form.....	137
15. The case of end manifolds.....	138

## CHAPTER VI

## THE CRITICAL SETS OF FUNCTIONS

1. The non-degenerate case.....	142
2. The problem of equivalence.....	146
3. Cycles neighboring $\sigma$ .....	151
4. Neighborhood functions.....	152
5. The determination of spannable and critical sets.....	156
6. Classification of cycles.....	158
7. The type numbers of a critical set.....	165
8. Justification of the count of equivalent critical points.....	175
9. Normals from a point to a manifold.....	179
10. Symmetric squares of manifolds.....	181
11. Critical chords of manifolds.....	183

## CHAPTER VII

## THE BOUNDARY PROBLEM IN THE LARGE

1. The functional domain $\Omega$ .....	193
2. The function $J(\pi)$ .....	196
3. The domain $J(\pi) < b$ .....	200
4. Restricted domains on $\Omega$ .....	205
5. The $J$ -distance between restricted curves.....	208
6. Cycles on $\Omega$ neighboring a critical set $\omega$ .....	212
7. The space $\Sigma$ of $J$ -normal points.....	213
8. Theorem 6.1.....	216
9. Cycles on the domains $J < b$ and $J < a$ .....	220
10. The existence of critical extremals.....	221
11. The non-degenerate critical extremal.....	226
12. The non-degenerate problem.....	230
13. The fixed end point problem.....	234

14. The one variable end point problem.....	240
15. The two point functional connectivities of an $m$ -sphere.....	244

CHAPTER VIII

CLOSED EXTREMALS

1. The complexes $K$ , $K^p$ , and $\Pi^p$ .....	250
2. The infinite space $\Omega$ .....	253
3. Critical sets of extremals.....	256
4. The domain $\Pi^p$ .....	258
5. Critical sets on $\Pi^p$ .....	261
6. Critical sets on $\Omega$ .....	264
7. The extension of a chain on $\Pi^p$ .....	273
8. The $r$ -fold join of a cycle.....	277
9. Finiteness of the basic maximal sets.....	285
10. Numerical invariants of a closed extremal $g$ .....	288
11. The non-degenerate closed extremal.....	291
12. Metrics with elementary arcs.....	297

CHAPTER IX

SOLUTION OF THE POINCARÉ CONTINUATION PROBLEM

1. Regular submanifolds of $R^p$ .....	307
2. Geodesics on $m$ -ellipsoids.....	312
3. The indices of the ellipses $g_{ij}$ .....	316
4. The exclusiveness of the closed geodesics $g_{ij}^r$ .....	319
5. The linking cycles $\Lambda_{12}(a)$ .....	323
6. Symmetric chains and cycles.....	326
7. The linking cycles $\lambda_{ij}^r(a)$ .....	333
8. The circular connectivities of the $m$ -sphere.....	346
9. Topologically related closed extremals.....	350
10. Continuation theorems.....	354
Bibliography.....	359
Index.....	367
